The twenty-fifth anniversary of Prof. Langdell's connection with the Harvard Law School is gracefully recognized by his present and former colleagues in the faculty of that institution by the dedication to him of a series of essays which constitute the May number of the *Harvard Law Review*. The essays are for the most part sufficiently technical and recondite, but it is worthy of notice by the laity that Prof. Thayer attributes the exceptional liberality of Massachusetts law in the admission of the testimony of witnesses which the common law would exclude, in part to the presence of Quakers and Indians. The former refused to swear, and the belief of the latter in false gods made their oaths extremely unsatisfactory to the Puritan lawyers. But as their evidence, like that of the negroes in the Southern States, was frequently necessary, concessions were made which undermined the common-law rule. Prof. J. C. Gray, it may be added, in his essay upon judicial precedents, brings out the true nature of the doctrine known as *stare decisis*, to which the income-tax litigation has given such prominence. "The highest courts of the respective States, as well as the Supreme Court of the United States, all consider that they have the power to depart from their former rulings, however inexpedient it may be to exercise it."

Recent bulletins of the Museum of Compara-

tive Zoölogy at Harvard College give accounts of observations made by Alexander Agassiz on the Bahamas and Bermudas. Along with many other students of coral reefs and islands in recent years, Agassiz doubts the sufficiency of Darwin's theory of their origin. "Investigators have been carried away by the simplicity of the theory of subsidence propounded by Darwin, and it is only of late years, since a mass of observations have been made which could not be explained by the prevailing theory, that we have at last realized how complicated the problem is." No substitute theory is offered, the later bulletin closing with: " . . . how little we as yet know of the history of the formation of coral reefs."

The origin of Lake Zurich is ably summarized by Aeppli in the thirty-fourth number of the reports on the geological map of Switzerland. Basing his conclusions on the studies of Heim, Wettstein, Penck, Dupasquier, and others, Aeppli shows that the valley in which the lake lies was eroded after the first glacial epoch, by which the high level gravels (*Deckenschotter*) were spread over the Alpine foreland; and that, by a transverse orogenic deformation, the valley was locally depressed and converted into a lake before the advent of the glaciers of later epochs. The problem thus solved is of peculiar interest, because Lake Zurich is one of the many piedmont lakes whose origin by glacial erosion has been confidently announced by many geologists; but it now appears that the peculiar features of valley formation and deformation with which the lake is intimately associated cannot be explained, either in process or in time, by glacial action.

In the *Annales de Géographie* for April, M. Émile Gautier gives an account, chiefly orographical, of western Madagascar, the results of his travels during the last three years in that island. It is accompanied by an excellent map, colored so as to show the various heights. M. Ed. Blanc treats of the construction of the Transcaspian Railway, dwelling especially upon the difficulties encountered in bridging the Oxus, and the methods adopted (not yet satisfactory, however) for protecting the track from the blowing sand. Comparing it with the proposed Trans-Saharan line, he calls attention to the fact that in no part of the Russian road are the dunes more than eighteen metres high, while in the great desert they are sometimes more than a hundred. The sand also has a stability, being covered with snow at least once in the year, which it does not have in Africa. The French, again, will find it vastly more difficult to secure a sufficient supply of water for their road, or a fuel as cheap as the refuse petroleum used by the Russians.

The London *Journal of Education* for May prints in a supplement the Hon. Lionel A. Tollemache's "Recollections of Jowett." An intimacy of many years, with notes of several conversations, furnishes Mr. Tollemache with much new and rich material; while his appreciations of Jowett are based on kindred tastes and studies, and a wide acquaintance with the men and movements in the midst of which the Master of Balliol passed his life. Short of his forthcoming biography, we know not where to look for more light on the man and his opinions.

—Chitral and some incidents of a residence in it two years ago are described in an entertaining way by Capt. F. E. Younghusband in the *Geographical Journal* for May. He mentions, among other things, seeing in the neighboring state of Hunza a watercourse constructed by the natives for artificial irrigation, which in one part went through a tunnel "scooped out entirely with ibex-horns." Iron tools, he adds, "were until recently almost unknown in the country." This recalls the fact that the Siwashes of our northwest coast still shape their cedar canoes with buck-horn adzes. Capt. S. L. Hinde gives a rather gruesome account of the Belgian expedition which he accompanied across the Free State, and which destroyed the strongholds of the Arab slave-hunters on the upper Congo. One of their towns had four gates, "each approached by a very handsome pavement of human skulls. . . . I counted more than two thousand skulls in the pavement of one gate alone. Almost every tree forming the boma was crowned with a human skull." One of the principal results of the destruction of the great market towns of Nyangwe and Kasongo will be the diversion of the interior trade from Zanzibar to the Atlantic by the Congo. Within a few years there has been considerable activity shown in developing parts of the Free State territories. On the Kasai, three years ago, there was but one station. Now there are fourteen belonging to different companies. At that time there were no stations on the Sankuru. At present twelve are engaged in the collection of enormous quantities of India-rubber. Prof. B. H. Chamberlain tells of the distinctive customs of the Luchu islanders. Referring to the absolute seclusion of the ladies, he says that Japanese who have been long residents in the islands declare that they have never seen a Luchuan lady. On the other hand, every Japanese trader arriving in Luchu engages one of the numerous hetairæ, "to whom he intrusts everything, even to the management of his mercantile affairs; and when he departs, the girl sells to best advantage the articles confided to her charge, so that when her master comes back again she is able to render him a satisfactory account in which there is never any error or prevarication to the amount of a single penny." She keeps accounts involving tens of thousands of cash by means of knots tied in cords. The principal product of the islands is sugar, of which about thirty-four million pounds is annually exported to Japan. The Japanese are endeavoring to educate the children, and at the entrance to each village there is now written up the number of inhabitants and the number of children of school age.

—The National Sculpture Society's first independent exhibition, which closes to-day, has proved a success both as to the number of visitors and as to the general interest shown by the art-loving public. Sculpture, other than portrait sculpture, has heretofore been to this community a matter of museums—a matter of casts and of archæology. The few pieces of sculpture which decorate the fronts of New York buildings are placed high, and are lost in the size and mass of the large façade; moreover, the public has never learned to look for them, and then it is certain that they do not seriously modify the architectural effect. One who has frequented the galleries during the present exhibition, however, will have noted a very general interest in sculpture of all sorts—in statues and in reliefs, in large and in small pieces, in everything, in short, except pure decoration, for which nobody cares in this community except a few collectors. The pieces of pure sculpturesque imagining, such as Mr. C. H. Niehaus's "Scraper," or athlete using the strigil; Mr. J. S. Hartley's "Whirlwind," Mr. Olin Warner's "Diana," and Mr. F. W. Macmonnies's "Diana," "The Bacchante," and other statuettes; narrative pieces, such as Mr. Daniel C. French's "Gallaudet Teaching the Deaf-Mute Child," the bronze of which is in Washington; Mr. J. Q. A. Ward's "Pilgrim," the bronze of which is in Central Park, and Mr. H. A. Macneil's small bronze "Primitive Indians' Music"; even the portrait busts in all their varieties, from Mr. Ward's dignified work, No. 163, to Mr. Warner's baby bronze "Rosalie," in her tight-fitting cap, have received at least a part of the attention which is their due. Architectural sculpture itself it is well to see and judge in the gallery and in the plaster. Mr. Philip Martiny's "Commerce," as it stands in this exhibition, will send its admirers to his caryatids of the *Mail and Express* building. Mr. J. Massy Rhind's "Agriculture" we shall all look for when put up on the front of the American Surety Company's building, and from this we shall all look to the other five severe and formal figures which will stand in rank with it above our heads on Broadway. Mr. Warner's caryatids in the octagon gallery have done their work in a temporary structure, but may perhaps be called upon again: their artistic ability is not exhausted, and if there ever was a case for replicas, this is one. Mr. Herbert Adams's memorial bas-relief is known to a few as it is in the marble in the Judson Memorial Church; to see it here in the original plaster and in another light is a definite gain for art students. Mr. Karl Bitter's immense panel "Transportation" is now shown for the first time, and will be seen next in terracotta and in the waiting-room of a Philadelphia railway station. This work is so novel in significance, and in composition so strong and self-assertive, that it cannot be studied in too many lights or from too many points of view, physical and moral. In this exhibition the tree ferns mask its two extremities, and the design it is impossible to see in its completeness; moreover, the light has never been quite suited to its proper exhibition; the more need that all lovers of decorative sculpture should see it in Philadelphia when put up in its permanent place. Is there reason to hope that it will be better lighted there?

—The discovery by the public that the plasters are the true originals and deserve at least as careful study as the marble or the bronze, would alone suffice to justify this exhibition. Would it be impracticable to provide a permanent home for these same plasters? They are destroyed either in the bronze foundry or in the marble-cutter's shop, or else deliberately because no sculptor can find room to shelter them. Works that have been erected in bronze or in marble, in Washington, in the West, in the South, might have been shown in their original plaster at this exhibition, but that rents are too high, studios too small, statues too big. What if New York possessed a fire-proof structure, no matter how remote, no matter how plain and unarchitectural a place, where, in a good light and free from injury, the best of our annual production could be preserved? It would be invaluable for sculptors and for students, and even the general public would find it nearly as attractive as any permanent picture gallery. The National Sculpture Society might undertake this task with the certainty of ultimate if not immediate success.

—A joint-stock company of artists, men of letters, and patrons of art has been formed in Berlin for the purpose, among others, of publishing a periodical "devoted to creative art and to all the interests which spring from art and have no purposes but the promotion of

art." *Pan* is the name selected, as well for the association as for the periodical, of which latter the first number (for April and May) has just been received here (G. E. Stechert). In more ways than one it departs from the beaten path of art magazines. Its size is quarto, or, to be exact, 11x14½ inches; and although it contains only forty-eight pages and twelve full-page plates, it is printed on such heavy paper that its thickness is half an inch. Everything about it is lavishly artistic, even down to a minor detail like the tissue paper which protects the engravings and each sheet of which differs from the others in the design embossed on it like a water-mark. The typography is in itself a work of art, and offers a bewildering variety, a fantastic attempt being made to use for each article the precise kind of type adapted to the subject. Thus, a metrical translation of a weird Norwegian poem by Arne Garborg is so printed and illustrated as to resemble the mediæval German chap-books. The "motive" of the poem is a dance of villagers, every one of whom is shadowed by a beast expressive of his or her inmost character, as a bear, a goat, a sow, a goose, etc. Then, again, a French sonnet of Stéphane Mallarmé is reproduced in autograph. The illustrations offer specimens of the various species of engraving and process work. There is a fine heliogravure of a painting by Arnold Boecklin, "Perseus and Andromeda," an original etching by Max Liebermann, an original "vernis-mou" by Félicien Rops, a woodcut portrait of R. Schumann by Felix Vallotton, reproductions of two of Albrecht Dürer's rarer woodcuts, process-etchings of paintings by Fritz von Uhde and James Whistler, and of sculptures by Gustav Vigeland and Max Klinger. There is an original "glyptograph," a Sappho, by Maurice Dumont. The term glyptograph is a new name for a new thing—an embossed or relief print in water-color produced by pressing a sheet of damp paper into the depressions of a mould. The French call such prints "estampes de sculpteurs."

—The letterpress has somewhat of a *fin de siècle* cast, and several of the contributors belong to Max Nordau's company of degenerates, notably Friedrich Nietzsche and Paul Verlaine. The French poem of Verlaine, however, is unusually sane and intelligible, and inspired by a grim and acrid humor. Of indubitable literary importance is the opening chapter of a forthcoming volume of reminiscences by Theodor Fontane, poet and novelist, who has just celebrated his seventy-fifth birthday. Here, too, there is humor, but of a delightfully sunny and genial kind. If the whole book continues in the same strain, there is little risk in promising it an enthusiastic reception and an enduring fame. There is also an extract from another work soon to appear, a treatise on medals, by Alfred Lichtwark. The mode of publication of *Pan* is quite original. For its first year five numbers are announced, three of them bi-monthly, the other two quarterly, with a total output of 240 pages of text and seventy plates of illustrations. There are three editions, the general one of 1,500 copies, of which the subscription price is 75 marks ($18) a year, the *édition de luxe*, seventy numbered copies, 160 marks, and an artists' edition of thirty copies, not offered to the public, but reserved for stockholders; the owner of thirty 100 mark shares receiving a copy free, *in perpetuo*, while the owner of a single share pays 300 marks for it, with a sliding scale between these two extremes. The holder of twenty shares receives the *édition de luxe* free; of ten shares, the ordinary edition. Single copies of the latter cost twenty and thirty marks, according to size. *Pan* contains no advertisements.

—'Für meine Freunde' (Giessen: Roth) is a delightful volume of personal reminiscences by the eminent physiologist and physician Jacob Moleschott, who was born August 9, 1822, at Hertogenbosch in Holland, and died May 20, 1893, at Rome, where he had practised his profession and held the chair of physiology in the University since 1879. He pursued his studies almost entirely in Germany, first in the Gymnasium at Cleves and afterwards in the University of Heidelberg, where he was graduated as Doctor of Medicine in 1845. In order to be qualified to practise medicine in Holland it was necessary to have a diploma from a Dutch university; he therefore went to Leyden, where he passed a second examination, a so-called *colloquium doctum*, which, as the name implies, was little more than a pleasant conversation with the principal members of the medical faculty, for a couple of hours, on therapeutics and especially on endemic diseases in Holland. He then settled in Utrecht and devoted all the time he could spare from his professional duties to anatomical and physiological researches in connection with Mulder, Donders, and Van Deen; but his longing for a larger sphere of activity as a scientific investigator led him to habilitate in 1847 as privatdocent in the University of Heidelberg, where he was not only remarkably successful as a teacher, but also wrote several of his most important works, of which 'Lehre der Nahrungsmittel' and 'Der Kreislauf des Lebens' passed through five editions and made his reputation as a physiologist. It was in the book on food that, in speaking of the constitution and functions of the brain, he used the expression, "Without phosphorus no thought"; and Ludwig Feuerbach summed up its contents in the terse phrase, "Man is what he eats." Hunger is now generally recognized by scientists as the one great original impulse to human effort, and therefore the primal source of all civilization, and the means taken to appease it exert an immense influence upon the growth and character of the individual and the race and form an essential element of human culture. But Moleschott's theory of nutrition, although approved and openly endorsed by men like Humboldt, was caviare to the senate of the University of Heidelberg, who informed Moleschott that unless he ceased to corrupt the youth by his lectures and publications, the *venia docendi*, or permission to teach, would be withdrawn. The students published a vigorous protest against this defamation of their highly esteemed teacher, who, nevertheless, resolved to sever his connection with an institution in which the liberty of instruction existed only in name. Two years later, in 1856, he accepted a professorship in Zurich, whence he was called in 1861 to a similar position in Turin. The volume closes with an account of his life at the Swiss University.

RECENT AMERICAN POETRY.

A CASUAL list, prepared by some one in England, of forty living English poets has been expanded by some reverential American into "fifty masters of strong and vigorous English verse," and is going the rounds with steadily increasing numbers and epithets; and will probably reach the expanded assertion of a hundred living Englishmen, all Shaksperes. It is quite in keeping with our still lingering literary colonialism. So utterly mediocre are many of the names thus given in the English lists that they could easily be paralleled from the *Magazine of Poetry*. Thus much for quality, and for quantity it may fairly be said that the number of new poets, so called, appearing annually in this country is far greater than in England. As to their tendencies, as we have several times pointed out, the American bards are cruder and also more fresh and genuine; the Englishmen have more of artificiality and of cant, especially of French cant; when one strikes the balance, there is not much to choose.

The most interesting of the new brood of English poets are unquestionably of Celtic race, and often Catholics; and it is a remarkable fact that the most noticeable recent names on each side of the water are of that same faith—Francis Thompson in England and Father Tabb in America. The former, at least, dwells with a Brotherhood; the latter is a veritable priest, and also a Virginian, although his work is described in foreign newspapers as an emanation of the Puritan and New England muse. The true phenomenon, however, goes deeper than this. Non-Puritan though they be, the verses of this author—'Poems, by John B. Tabb' (Boston: Copeland)—show the most singular analogy here and there with those of the most Puritan and self contained of New England women, Emily Dickinson. There are pages here which might as well have appeared in either of her volumes—the same fine, shy, recluse observation of nature and of men, and the same terse brevity of utterance. Take, for instance, the poem of Father Tabb on "The Humming Bird" (p. 59):

"A flash of harmless lightning,
A mist of rainbow dyes,
The burnished sunbeams brightening
From flower to flower he flies;
While wakes the nodding blossom
But just too late to see
What lip hath touched her bosom
And drained her rosary."

Now turn to Emily Dickinson (i., 130):

"A route of evanescence
With a revolving wheel;
A resonance of emerald,
A rush of cochineal;
And every blossom on the bush
Adjusts its tumbled head—
The mail from Tunis, probably,
An easy morning's ride."

The woman's characterization is far more terse and vigorous, with more of motion and of color; she does not, like the man, sentimentalize a little bit over the blossom and her wooer, but who can help seeing the analogy? Probably Father Tabb had never heard of Emily Dickinson, nor she of him, when these poems were written; and it would be easy to insist too much on the analogy of mental attitude between the celibate woman and the celibate priest. But note again the resemblance in this bit of fancy, which might have come equally well out of either collection of poems, but is really from Father Tabb's (p. 108):

THE TAX-GATHERER.

And pray, who are you?
Said the violet blue
To the Bee, with surprise
At his wonderful size,
To her eyeglass of dew.

"I, madam," quoth he,
"Am a publican Bee,
Collecting the tax
On honey and wax.
Have you nothing for me?"

There are depths reached by Emily Dickinson, in her strange way, which Father Tabb does not reach; but he touches a far greater variety of interests, and shows constantly the sense of finish and of form on the larger scale, qualities the want of which was so plain in her. There are poems like Herrick or Vaughan in their

delicate perfection, pieces of almost flawless chiselling, as, for instance, this (p. 33):

GRIEF SONG.

New grief, new tears;—
Brief the reign of sorrow;
Clouds that gather with the night
Scatter on the morrow.

Old grief, old tears;—
Come and gone together;
Not a fleck upon the sky
Telling whence or whither.

Old grief, new tears;—
Deep to deep is calling;
Life is but a passing cloud
Whence the rain is falling.

When we add that no recent poet has written with more longing tenderness of woman's love, and with more delicious playful fondness of childhood and infancy, the reader must needs wonder what early joys and sorrows went to the making of this poet.

His little volume is dedicated to Sidney Lanier, who was, it is understood, his fellow-soldier in the Confederate Army and, finally, fellow-prisoner. To Lanier's fine gifts we have before paid tribute, and his 'Select Poems' (Scribners) have now been carefully brought together, with a fairly good introduction and an excellent series of notes and bibliography, by Dr. Morgan Callaway, jr., of the University of Texas, who perhaps acts indiscreetly in giving five lines of the small title-page to himself and his laurels, with only one for Lanier. The introductory memoir has sometimes a trite flavor, too, as when the writer gravely remarks, "Like most great poets of modern times, Lanier was a sincere lover of nature" (p. xxxi). Nevertheless, the editing is so good, and the poems themselves have a lyrical cadence so rare, that all must prize this little collection.

In 'Chocorua's Tenants,' by the late Frank Bolles (Houghton), we have rather a *tour de force* than a poem, because every experiment in the Kalevala measure, even Longfellow's 'Hiawatha,' appears a little remote and borrowed, like a spinning-wheel in a modern parlor. But Mr. Bolles's observation was so fine and delicate, and his thought so sympathetic—coming far nearer to Thoreau, in these respects, than Burroughs, Torrey, or any other of Thoreau's successors—that the book renews the sense of that large loss experienced by American literature in his early death. In this book the jay and kingfisher, with the rarer grouse and log-cock, come before us as they actually dwell around Chocorua. The volume is full of those delicate bird-notes which grow only finer as the landscape becomes more shaggy; and, with the steady disappearance of wild quadrupeds, it is something that the birds remain and have here found their chronicler. 'In Woods and Fields,' by Augusta Larned (Putnams), has not the fine touch of Mr. Bolles, but she handles more varied measures, and the very titles of her poems—"Milkweed," "Clover Fields," "Wood Mould," "The Herb Sellers," "The Threshing Floor," "The Veery"—show a fresh and sympathetic mind. She is, however, careless of her measures, and almost hopelessly negligent as to her rhymes, disfiguring by the jangle of her terminations a poem so fresh and aromatic as her "Milkweed" (p. 66), which begins thus:

"Small spinner of the fields,
Where are thy fairy reels?
Thy busy spindles fine,
To mesh this silken twine?

"I know thy distaff green,
Fretting the satin sheen
Of thread more delicate
Than wrought Ulysses' mate.

"Thou art all fantasy,
Like some fond poet,—he
Who from his heart untwines
The stuff of mazy rhymes."

Whoever opens a book by Charles Godfrey Leland may always count upon the same rattling spirits, the same versatile deftness of touch, and the same disappointment. 'Songs of the Sea and Idyls of the Land' (London: Black; New York: Macmillan) illustrates this assertion. The last half of the book, moreover, is mere dialect and border-tale; but the first has more unique attraction, being a series of sea-songs of the old pattern, supposed to be sung in a circle of mariners now dead and gone, who tell stories and sing around the fire of an old sailors' tavern at the "North End" of Boston, as they did before the race of sailors proper (or improper) had ceased to be, and before successive waves of Irish, Italians, and Russians had transformed that region by distinct stages. In the book the seamen sing songs which are, as the author frankly admits, made up of all manner of snatches and borrowings, woven into lays that all have a flavor of salt in them and recall the voyages of half a century ago, when voyages meant something. The following, for instance, brings back the period when sailors were sailors indeed, and sung as they heaved at the capstan. Rudyard Kipling seems very over-dramatic when we revert to Leland's "Time for us to go" (p. 64):

"With sails let fall and sheeted home, and clear of the ground were we,
We passed the bank, stood round the Light, and sailed away to sea;
"The wind was fair and the coast was clear, and the brig was noways slow,
For she was built in Baltimore, and 'twas time for us to go.

"Time for us to go,
Time for us to go,
For she was built in Baltimore and 'tis time for us to go."

James Whitcomb Riley is even surer of his audience than Leland; and though 'Armazindy' (Indianapolis: Bowen-Mitchell) is not one of his best volumes, yet it has its own quality, and preserves the traditions of homely pathos which he can still strike at will. Eugene Field's 'Love Songs of Childhood' (Scribners) has the vivacity and attractiveness which always belong to this author's writings, sometimes cheapened a little, in this case, for his younger auditors, but saved by a hearty love for them. Mr. Field is very impressible; we often see the influence of Riley and sometimes of 'Alice's Adventures'; but these are good models in dealing with children, and the doubtful phrase "love-song" is justified by a very loving dedication of the ballads to—his aunt!

'Philoctetes,' by J. E. Nesmith (privately printed at the Riverside Press), is strongest where it is most local, and celebrates the Colorado Cañons with a vigor that may well preserve the author's name. The title-poem is less really vigorous, though more ambitious. In 'The Moods of a Soul,' by Louis M. Elshemus (Buffalo: Moulton), we see the hopeless condition of a man of susceptible mind without a saving sense of humor. It is difficult to tell what is to help a man who can soberly print passages like this (p. 54):

"I've seen my love grow amorous,
She who methought could never love me;
She walked, as sails an albatross,
And ever clapped her hands above me!"

Or this (p. 69):

"My rare Marie, none have I seen like her:
Rare roses bubbling on rare lavender
Her cheeks were—and her flirting eye!"

Or this (p. 93):

"Mewould to sing, and sing, till with my strain
I melt into the ether's boundless home—
Away from all these sins and tears to roam—
Away from fame, from wrong, from hate and pain!
Far, far, with my dear lyre at my glow-side."

It will not be difficult for Mr. Elshemus to remain at a distance from fame unless he can become a severer critic on himself.

'Wayside Poems,' by Wallace Bruce (Harpers), are of the same honest, Scotch-Irish, often unpoetic quality shown in this author's 'Homestead Poems'; but they may have been read or sung with screaming applause at lodge-meetings or international gatherings, and they have many illustrations of Scotch and Irish castles and places full of association. 'God's Parable, and Other Poems,' by Susannah Massey (Putnams), has in it some fruits of travel, offering pretty *chansons* and dramatic scenes from various lands. 'A Light through the Storm,' by Charles A. Keeler (San Francisco: Doxey), has some local coloring and a little fire, but not very much. A good deal of frost is offered, on the other hand, by 'The White Tsar, and Other Poems,' by Henry Bedlow, illustrated by J. Steeple Davis (Tait & Sons). It is a book issued in what the newspapers call a "sumptuous" style, as to paper, type, and margin, but both the poetry and illustrations are in the last degree turgid and sensational. The White Tsar is the polar bear, a symbol in itself rather poetic, and capable of being effectively handled under better auspices.

'Poems, Second Edition, and Later Poems,' by the Rev. Edward Octavus Flagg, D.D. (Whittaker), is a volume dwelling wholly within the realm of commonplace; but this could scarcely have been the case with the prose sermon which the author delivered, as the preface tells us, at the funeral of that eminent sinner, Col. James Fisk, jr., of whose militia regiment he was the chaplain. "Col. Fisk told his private secretary that his purpose was to erect for the Doctor ultimately as handsome a church as could be found in the city of New York" (p. vii). It seems a little unjust that, after all this suggested favor, there should be in the volume no tuneful commemoration of so willing a benefactor. Even the poem "I Love My Church" (p. 240) appears to refer to some actual, not merely potential church, and the name of "Col. Fisk" is not mentioned.

We are glad to do a somewhat tardy justice to a volume of poems too much ignored by critics thus far, 'The Wind in the Clearing, and Other Poems,' by Robert Cameron Rogers (Putnams). To begin with, the title poem is one of the best things in the book—a rare circumstance, since poets are apt to use their heaviest production for this precedence. The office of the wind in the imaginary clearing is to give voice to the fallen trees, the dried-up brooks, and the vanished men, and to raise the question whether the world has gained, altogether, by the destruction. It should be printed as a circular by the Forestry Commission; and no volume of war poetry should be regarded as complete without "The Colonel's Story" (p. 69), a thoroughly vigorous tale of daring and death, whose only defect is that it is too long to be here quoted. While the Forestry Commission does this work, it might also include the charming little volume 'Wild Flower Sonnets,' by Emily Shaw Forman, with illustrations by Abbot Graves (Boston: Knight). No better antidote can be imagined for the lark-and-nightingale weakness than this thoroughly indigenous and loving series of sonnets; and every friend of wild flowers should carry the little book into the country, as a summer manual. The author is so thoroughly well-informed that she even celebrates the most shy and refined of all American flowers—the Sabbatia of Plymouth, Mass., and the Narragansett country.

SABBATIA.

Upon the margin of a reedy pond,
Held in the hollow of low, rounded hills,
Where Silence, like a presence, broods and thrills,

I found Sabbatia. As a lover fond,
Flying the mistress of his heart to greet,
For- ets the world in reading her sweet eyes,
And cries, "For me God makes a paradise!"
So, kneeling, happy, at Sabbatia's feet,
Bathed in the sunsh'ne of her rosy smile,
I murmured, "'Twas for me she grew so fair."
For answer, lightly glided here and there
A blue-winged dragon-fly; a bird the while
Trilled one clear note; tall rushes stirred, and near
I caught the glisten of the sun-dew's tear.

'Poems of William Haines Lytle,' edited with memoir by William H. Venable (Cincinnati: Clarke Co.), is an exceptional book, in this respect, that the memoir is more interesting than the poems. Gen. Lytle was the fourth of his family to wear a military title, the first of this line having served in the Old French War and being afterwards one of the Kentucky pioneers. Gen. William Haines Lytle was killed at the battle of Chickamauga, and it is recorded of him that when pulling on his gloves for this last contest, he explained the pains he had taken with his toilet by saying: "I have tried to live like a gentleman and I propose to die like one" (p. 48). He died at thirty-eight, and it is possible that added years might have brought more intellectual fruit from this young hero. But this volume contains nothing above mediocrity, unless it be his one celebrated poem, "I am dying, Egypt, dying," and this owes its fame mainly to the five words from Shakspere which give its keynote, and which are simply extended into a turgid and sonorous poem that belongs to the same department with that stock bit of prose pomposity, "Spartacus the Gladiator." There exists a demand for such products in country academies, but they do not belong to literature. Mr. Venable, however, remarks that it is "unrivalled in popularity by anything yet written in the Ohio valley, excepting Kinney's beautiful lyric, 'The Rain on the Roof.'" The same quality of turgidness belongs to 'Songs of Dusk and Dawn,' by Walter Malone (Buffalo: Moulton); but it is to be counted to this author for righteousness that he celebrates the red-bird and the mocking-bird. In the same way Mrs. Sarah K. Bolton, in 'The Inevitable, and Other Poems' (Crowell), gives merit to a volume, not otherwise remarkable, by studies from life of the American robin and of "The Coloring of the Grapes." Mr. Warren Holden, also, whose numerous volumes are apt to be rather monotonous, strikes, in his 'Many Moods' (Philadelphia: Lippincott), a strong and real note when he comes to describe "The Whaleman" (p. 21).

A delicate little volume, privately printed, by Mrs. Emma Endicott Marean of Cambridge, Mass., is called simply 'Eighteen,' because it holds that number of modest poems for a daughter's eighteenth birthday. Many a book of poems having greater pretensions might be glad to include a single note struck so firmly and clearly as this:

CHOICE.

The string o'erstretchèd breaks, and the music flies;
The string o'erslack is dumb, and music dies;
Tune us the sitar neither low nor high.
—*Edwin Arnold.*

Nor low, nor high! My heart learned once that prayer,
That humble prayer, that asks the steady glow
Of moderation only; seeks to know
The strength of slow successes; fears to share
Ambitions sweet, tempting to heights more fair.
A simple life, attuned nor high nor low,
May gain a heaven, escape from bitter woe,
Nor need to greatly suffer, greatly dare.

Take back Thy gift of peace! I claim the smart
And ache of passion for a vision high!
Make me Thy instrument, and justify
This longing once Thy message to impart!
Awake one song to stir a hero's heart,
Then let the tense strings break, the music die!

THE MIGRATION OF SYMBOLS.—II.

The Migration of Symbols. By the Count Goblet d'Alviella. With an introduction by Sir George Birdwood. Westminster: Constable & Co. 1894.

THE Sacred Cone of Mesopotamia has been already referred to, but the western Semites also worshipped their great goddess under the image of a conical stone, or bethel. Its figurative representation plays a most important part in all their graphic arts, and is found alike on monuments, amulets, and coins. On some Phœnician monuments there is to be seen superadded to the cone a horizontal cross-bar, on the middle of which rests a handle. This shape bears a striking resemblance to the *crux ansata*, the so-called Key of Life, of the ancient Egyptians. This is the most frequently to be met with of any of their emblems. It is a T-shaped cross, surmounted by a handle or loop, whose hieroglyphic name is *ankh*, and its signification 'to live.' As an emblem of life, representing the male and female principles united, it is always borne in the hands of the gods, it is poured from a jar over the head of the King in a species of baptism, and it is laid symbolically on the lips of the mummy to revive it. Now the *crux ansata* certainly was not formed under the influence of the sacred Cone; but both were equally employed with the same import as a symbol of life conceived of in its widest and most abstract meaning, and as a talisman of the highest protective power. From Egypt the *crux ansata* spread first among the Phœnicians, and then through out the whole Semitic world, from Sardinia to Susiana. Thus there arose the possibility of it and the cone easily passing from one to the other without material alteration in their respective forms, or there even came a blending of the two shapes in a third which preserved their essentials. Indeed it might be said that such is one of the laws of symbolism. This influence of the one form upon the other is met with even among the Greeks, under whose genius the rude conical stone was not long in developing into the human shape. The Ephesian Artemis, with her head encircled with a halo, her forearms projecting from either side of the body, and her lower members wedged into a case, is an anthropomorphized *crux ansata*. In later times the Coptic Christians employed the same emblem in the place of the Greek or Latin cross, and even used it to portray the Chrism, the monogram formed out of the first two letters of the name of Christ. When we see how often dissimilar objects came to borrow each other's forms, and were made to blend with each other, we are forced to the conclusion, says our author, that no combination is unacceptable to symbolism when an amalgamation of ideas or beliefs is to be strengthened through such blending of the images by which they are expressed.

The Winged Globe was one of the most widely spread and most venerated symbols. It has been called the Egyptian symbol *par excellence*, and from that country it spread, under various modifications, throughout the whole of the Old World. It is formed out of a combination of the various representations of the sun that have prevailed in different localities in Egypt, whose whole mythology has been said to have ended by becoming a solar drama. Two urœus snakes, or asps, with heads erect, are twisted round a globe-shaped disk, behind which are the outstretched wings of a hawk, and on its top the horns of a goat. It was intended to commemorate the victory of the principle of light and good over that of darkness and evil. It spread readily among the Phœnicians, where it is found suspended over the sacred tree and the sacred cone, and was carried wheresoever their art was introduced—westward to Carthage, Sicily, Sardinia, and Cyprus, eastward to western Asia. Very early it penetrated on the north to the Hittites; and when it reached Mesopotamia in the time of the Sargonidæ, the winged circle assumed the shape of the wheel or rosette, surmounted by a scroll with upcurled extremities and with a feathered tail opening out like a fan; or a human figure in an attitude sometimes of benediction, sometimes warlike, was inscribed within the disk. Then it was no longer exclusively a solar emblem, but served to express the general idea of divinity. From Mesopotamia it passed into Persia, principally in the anthropoid type. It was, however, never adopted by Greece, and it is nowhere met with in Europe, except, as before stated, in the Mediterranean islands. When Greece took over from Asia symbolic combinations, in which it was originally represented, she replaced it by the thunderbolt. But our author believes that the areole, or halo, which encircles the heads of her divinities, and which Christian art has borrowed from the classic, was directly derived from it. What have been sometimes supposed to be instances of its occurrence in the New World he is inclined to consider mere accidental resemblances.

The Caduceus is one of the symbolic figures which have most tried the patience of scholars. Its classic type, a winged rod round which two serpents are symmetrically entwined, is due to the mythographers of later times, and is very remote from its primitive form. In the Homeric Hymn it is called "the golden rod, three-petalled of happiness and wealth," which Phœbus gave to the youthful Hermes; but on early Greek monuments the three leaves are represented by a disk surmounted by an incomplete circle. In this shape it constantly appears on Phœnician monuments, and at Carthage, where it seems to have been essentially a solar emblem, it is nearly always associated with the sacred cone. The question has been raised whether it may not have been borrowed by the Phœnicians from the Greeks; but this is improbable, as it is likewise found on the Hittite monuments, where it could not possibly have been an importation from Greece. On them it assumes the form of a globe surmounted by horns. Numerous origins and manifold antecedents have been attributed to it, such as an equivalent of the thunderbolt, a form of the sacred tree, or a combination of the solar globe with the lunar crescent. Some examples seem clearly to indicate a transition from the sacred tree, surmounted by the solar disk, to the form of the caduceus of the Hittites. Our author believes it was employed originally as a religious or military standard or flag, and that it was gradually modified by coming in contact with other symbols. Some Assyrian bas-reliefs display a military standard, sometimes consisting of a large ring placed upon a staff with two loose bandelets attached, sometimes of a winged globe similarly disposed. If on top of such a ring there be placed a pair of horns, symbols of divine power among the Mesopotamians, or the crescent of the moon so frequently coupled with the globe in the religious imagery of the Phœnicians, the result will be the Punic caduceus. This Assyrian military standard may be considered to be the prototype of the *labarum*, which Constantine, after his conversion to Christianity, chose for his own standard, and which might equally well have been claimed

as a symbol by the worshippers of the sun. Under the type of its latest transformation in Greece, too, a winged rod with two serpents twined round it, it has come down to our own times to represent two of the functions of Hermes, more than ever in vogue among men, industry and commerce. It has survived in India to the present day under the form of two serpents entwined, probably introduced in the track of Alexander the Great. It is also to be met with in that country in earlier times in its simpler form, resembling our astronomical sign for the planet Mercury. This seems to be connected with the earliest type, formed from a disk surmounted by a crescent, and that form of the caduceus appears to have been confounded at a remote date in India with the trident, the last of the symbolic figures to which we shall refer.

The Trisula, the form of the trident peculiar to the Buddhists, was of great importance in the symbolism of the Hindus; but whether it was an imitation by them of the type of the thunderbolt to be seen on Assyrian sculptures, or was devised by them spontaneously, is uncertain. Its simplest form, which is, however, rarely to be met with, is an omicron surmounted by an omega. Nearly always the upper portion of the omicron is flanked by two small circles, or by two horizontal strokes, which often take the appearance of leaves or small wings. The points of the omega are generally changed into *fleurons;* and the disk itself is placed upon a pedestal. From its lower arc there fall two spires shaped like serpents' tails with the ends curving sometimes up and sometimes down. It will readily be seen that this is a very complex symbol. None of the Buddhist texts give any positive information in regard to its origin or meaning, and few symbols have given rise to more varied explanations. As it is found in ancient caves, in connection with other symbols of sun-worship, the simplest and most natural explanation would connect it primitively with such a creed. The upper part of the figure is frequently found separated from the lower; sometimes this is plainly a trident superposed upon a disk shaped nucleus. Now the worship of the sun under the form of a disk was widely spread over India in remote times; later the disk became a wheel, and this was converted by the Buddhists into their "wheel of the law." Thus the trident would be the secondary portion, and it may possibly have symbolized the flash of lightning, as did Neptune's trident among the Greeks; but more probably it is the image of the solar radiation. Among the northern Buddhists it personifies the heaven of pure flame superposed upon the heaven of the sun. Though undoubtedly a Hindu emblem, its primitive shape seems to have early felt the influence of the caduceus, while its more complex forms exhibit an unquestionable likeness to certain types of the winged globe. This is not to be wondered at, since the earliest art centres were Egypt and Mesopotamia; and as the Indian alphabets are of Semitic origin, their religious symbols may well have submitted to the same influence. In later times, after Alexander, a Hellenizing tendency from the Indo-Bactrians spread into western India, and this was succeeded by a veritable invasion of Iranian divinities under the Indo-Scythians. Then Buddhism, having learned under what emblems the neighboring religions represented their great divinities, sought to appropriate them by adoption with a new significance, or by assimilating them to their own symbols with slight alterations. Still later the trisula was converted by Brahmanism into an anthropoid figure, and became the image of Jagenath. Finally, the vegetable kingdom was also laid under contribution, and the trisula came into a resemblance of the Tree of Knowledge. Although we have learned the probable signification of its factors in the creeds that preceded Buddhism, we know very little about its meaning in the religion that made the most use of it. Some unpublished text may reveal the real significance of a symbol before which millions have bowed in reverence. But the plastic development of the trisula shows with what facility emblems of most dissimilar origin may merge into one another, when in their form or their meaning there are sufficient points of contact.

We will bring our notice to an end by touching briefly on a couple of the most remarkable instances of the migration of early symbolic types to our own time, the Double Headed Eagle of Austria and of Russia, and the Three Legs of Man. The Double-Headed Eagle first appears on those venerable sculptures at Eyuk (ancient Pteria), in Asia Minor, in the midst of religious scenes dating back to what is generally believed to be the ancient civilization of the Hittites. It has also been found upon a Persian intaglio attributed to the period of the Arsacidæ. It was seen, in 1217 A. D., on the standards and crowns of the Turkman conquerors of Asia Minor, adopted by them as the symbol of omnipotence. At the time of the Crusades certain Flemish princes copied it from the Turkmen; and in 1345 it replaced the single-headed eagle in the armorial bearings of the Holy Roman Empire. Since 1806 this has been represented by the dual state known as the Austro-Hungarian monarchy. The double-headed eagle first appeared in the cognizance of the Russian Empire in 1497, ten years after the marriage of Ivan III., who was first Grand Duke of Moscow to take the title of Czar of Muscovy, with the niece of Constantine Palæologus, last of the Byzantine Cæsars.

We have already seen that the sun was early typified under the shape of the *triscele*, or three-legged figure; this developed into a disk, from which radiated three human legs, bent as in the act of running and united at the thighs. In this form it is frequently to be seen upon coins of Lycia (about 480 B. C.), and it also occurs upon those of Sicily, in the time of Agathocles (317 B. C.). There, however, it symbolizes not the sun, but the configuration of the island, Trinacria, the island of Three Capes. The figure is also known under the name of the *triquetra*. When Alexander III. of Scotland took over the Isle of Man from the Norwegians, in 1266, he adopted this device, with which he had become familiar at the English court of Henry III., who had been made for a brief period the nominal sovereign of Sicily by Pope Innocent IV., and it has figured ever since in the coat-of-arms of the Isle of Man.

We are told by Sir George Birdwood that "one of Messrs. Archibald Constable & Company's special objects in publishing the present English translation of this work has been to bring it within the reach of the Schools of Art throughout the United Kingdom." In the interest of decorative design in this country we most cordially join with him in commending Count d'Alviella's "alluring book" to all similar institutions in the United States. Its numerous illustrations will furnish to them a storehouse of beautiful ornamentation.

Letters of a Baritone. By Francis Walker. Scribners.

Mr. Francis Walker is one of the rapidly diminishing class of musicians who believe that modern Italy is still the best country for studying the vocal art. He says that nearly all foreign students go at once to Milan, "where perhaps four-fifths of the operatic engagements for Italy are made." Milan is doubtless at present the centre of musical life in Italy, and Italian musical life is almost entirely operatic. Yet when we look at the facts, we find that during the past operatic season, which lasted from December 26 to April 7, the Milanese heard not one singer to whom first-class prices would be paid in London or New York, while the sixty-six performances were limited entirely to nine second and third-rate operas: "Manon," "Sigurd," "Patrie," "Pêcheurs de Perles," "I Medici," "Werther," "Samson," "Ratcliff," and "Silvano." Such a record must be discouraging to any student of song who knows that the opportunity to hear great singers and great music is of at least as much importance to his artistic development as correct instruction in vocal technique. This important consideration Mr. Walker ignores entirely in his plea for Italy. Nor does a perusal of his letters convey the impression that good voice-builders are more plentiful there than elsewhere. He admits that "the unscrupulous, plausible wrecker of voices is found everywhere"; and one of his objects in publishing his letters was to warn others against "the pitfalls of charlatanism." His own experience was not at first encouraging. His first teacher, highly recommended and popular, did not give him the thorough and radical treatment he needed in regard to the placing and delivering of the voice, but gave him delicate *salon* pieces and operatic scenas to sing. Accordingly, he finally gave him up in favor of another, who began by telling him, "Almost everything you do is wrong," and who really proved to be a good teacher.

From one point of view only does Mr. Walker convince the reader that Italy is still an ideal country for students of song, namely, in the matter of expense. For climatic and other reasons he did not dwell in Milan, but in Florence, where he paid $4 a month for a room and $3 a week for his meals at a restaurant, which included plenty of meat, macaroni, vegetables, cheese, pastry, and good bread and red wine. To his teacher he paid $30 a month for his daily lessons of an hour each—an amount, he says, which would have afforded him in New York five lessons of equal duration. These low fees, however, are, it appears, charged only to professional students, for Mr. Walker says of his first teacher that "he can fill up all the hours he wishes to devote to teaching with amateurs who gladly pay him double the professional fees."

Florentine teachers told Mr. Walker that "they are ever on the watch for American students, who are almost sure to have bright, fresh, vigorous voices." The English students almost always go to Milan, and "they are generally better musicians than the American young men, because they are almost sure to have had early training as choir-boys." While warning young students against voice-wreckers, Mr. Walker does not overlook the fact that teachers often have no chance to form artists because the youths and maidens of eighteen imagine that a course of two or three years ought to land them on the stage as great artists, commanding big salaries. He also warns them that merely technical study will

make artisans but not artists of them, and that they ought to devote some of their time to reading good books on musical subjects. Many technical points are discussed at some length, but of all our author's hints the following is the most valuable: "More and more clearly what I have been doing makes me realize that the perfect, ideal voice is the outcome and the crown of a healthy body—an efflorescence, so to speak; and, of course, none but a healthy plant can produce a perfect flower"—a remark which may serve to counterbalance the writer's incompetent observations on Wagner's treatment of the voice.

While there is considerable padding in Mr. Walker's letters, there are also some pleasant glimpses of life in Italy, with suggestive remarks on the general condition of musical affairs. He found the military bands very good and impressive, whereas "the church organs are often very poor and badly played, *while there is rarely any good singing.*" In domestic circles he found that Liszt is "the demi-god of the piano in all Italy." In the opera-houses the Italians still show their lack of interest in everything except tunes and arias: "Over and over again in the course of the opera, the tide of careless, murmuring talk arose — never when any solo work was being done, but during the familiar ensemble portions which did not enchain the general interest." Of a certain singer he says that he is hardly the ideal tenor for "Faust," etc., "but the Italian public cares little for that. He sings—that is the main thing."

A History of the Baptist Churches in the United States. By A. H. Newman, D.D., LL.D., Professor of Church History, McMaster University, Toronto. [The American Church History Series.] New York: The Christian Literature Company. 1894. Pp. xv, 513.

For the volume under review Dr. Newman certainly deserves the gratitude of the religious body of which he is a member. He has told its story in a sympathetic spirit, and yet he has written with a careful and discriminating pen, and has plainly endeavored, with much success, to present its controversies with those within and without the number of the professed adherents to its principles with judicial fairness. Occasionally, as in his treatment of the Disciples, Dr. Newman sounds a moderately polemic note; but these slight exceptions only make more apparent the self-restraint of the writer's customary treatment of those from whom he differs. This readiness to admit the faults as well as to extol the virtues of the Baptist communions, which is perhaps the most marked feature of Dr. Newman's work, renders the narrative less picturesque than it might have been had the author possessed another temperament; and it must be said that the emphasis laid by the Baptists themselves on a few principles, thus narrowing while intensifying their denominational life, and the comparative rareness among them of theological innovators, or of controversies of novel doctrinal significance, make their history less fruitful in striking incidents than that of some of their sister communions.

Dr. Newman begins his work with a brief enumeration of Baptist principles, declaring them to be: "the absolute supremacy of the canonical Scriptures," believers' baptism, with a positive rejection of the application of the rite to infants, "regenerate membership," "liberty of conscience," and "insistence on immersion." The writer then rapidly sketches the rise of the Baptist movement, holding that the first traces of mediæval Baptist beliefs are to be found in the twelfth century in the teachings of Peter de Bruys, Henry of Lausanne, and probably of Arnold of Brescia. A similar rejection of infant baptism appeared among a portion of the Waldenses and of the Bohemian Brethren before the Reformation; so that Dr. Newman concludes that "the Anabaptist movement of the sixteenth century had its roots in the evangelical parties of the middle ages, to which it owed its modes of thought, its type of Christian life, and its methods of work." This matter has been treated at much greater length by Dr. Newman in an essay published by the American Society of Church History, and in this connection of the Anabaptists of the Reformation period with the mediæval anti-churchly parties Dr. Newman has the support of a number of students, notably of Ludwig Keller; but the relationship would be denied by many scholars, even historians of his own religious fellowship like Dr. H. S. Burrage. But from the Anabaptist manifestations of the Zwickau prophets and the Zürich radicals Dr. Newman is on more certain ground as he sketches the story of Baptist development in the German cities, describes the fanatic tragedy at Münster, pictures the establishment of the more peaceful Mennonites in Holland, and traces the rapid changes of belief which transformed the English Separatist leader John Smyth and his exiled Gainsborough flock into Baptists through the self-baptism of Smyth at Amsterdam in 1609—a step which led, in 1611 or 1612, to the establishment of the first Baptist church on English soil by Smyth's sometime associates, Helwys and Murton.

Probably the most striking feature of this introduction, at least to the general reader, is Dr. Newman's clear recognition that the principle of liberty of conscience was advocated among the Anabaptists by no less early a representative than Balthasar Hübmaier, who met his death at the stake in 1528, that this doctrine was emphasized by Smyth and Helwys, and that it was set forth by the London congregation which Helwys founded "with a fulness and persuasiveness not greatly surpassed even by Roger Williams, and to which Williams himself seems to have been greatly indebted." The facts here recounted are not new, but they need repetition if a common error is ever to be corrected.

Another matter of interest is Dr. Newman's cordial admission that though immersion was employed by a fraction of the Anabaptists, "the common practice among the Swiss, Austrian, Moravian, and Dutch parties was affusion." Affusion may also confidently be asserted to have been the method used by Smyth and the early English Baptists, so that the writer concludes that when, about March, 1639, Roger Williams and Ezekiel Holliman baptized each other and organized the first American Baptist church at Providence, "the introduction of immersion by Williams was three years in advance of its introduction among the Baptists of England." Yet possibly Dr. Newman claims too early a beginning for immersion in America, since some scholars in Baptist history believe that even Williams was baptized by sprinkling, and that immersion was introduced after Williams's return from England in 1644, probably by Mark Lukar, who certainly became in 1641 one of the first recipients of the rite in England and who was long ruling elder of the Newport church.

The greater portion of Dr. Newman's volume is devoted to the story of American Baptist development from Williams to the present day. Here the general reader will probably turn first of all to the author's treatment of that most variously estimated man, Roger Williams himself, and will find therein an admirable illustration of Dr. Newman's judicial temper. The writer is sincerely an admirer of Williams, but he is fair enough to Williams's opponents to say that,

"if we bear in mind the [Massachusetts] court's freedom from conscientious scruples as to the employment of force in matters of religion, and the pertinacity with which Williams advocated views regarded as unsettling and dangerous, we can scarcely fail to admire the forbearance of this body."

Dr. Newman says with truth that, "as a founder of a State no less than as an advocate of a great principle, Roger Williams deserves the gratitude and respect of all lovers of religious and civil liberty"; yet he is of the opinion that

"The immediate and probably the most influential causes of Williams's banishment were his defiant attitude towards the Court and the leading churches of the colony in accepting the pastorate of the Salem church against their earnest and oft-repeated protest, and the proceedings of the Salem church and colony under his direction with reference to a certain piece of land."

A similar carefulness of critical estimate is shown by Dr. Newman in his appreciative sketch of John Clarke of Newport, whom he would regard, rather than Williams, as "the most important American Baptist of the century in which he lived"—a judgment for which Williams's early renunciation of external Baptist fellowship, as well as Clarke's nearly equal desert as an advocate of liberty of conscience, gives a basis. With Clarke and Williams as the foremost American Baptists of their century, Dr. Newman places President Henry Dunster of Harvard, whose pathetic story he tells with considerable fulness of detail.

Dr. Newman's two chapters on the struggles for exemption from hostile legislation in New England and Virginia are of decided interest, for the Baptists were largely instrumental in the overthrow of the union of Church and State characteristic of so many of the colonies, and which survived the formation of the United States well into the present century in New England at least. It could be wished, however, that in treating that important movement in New England the writer had not confined himself so exclusively to the story of Massachusetts, and had not dismissed the contemporary agitation in Connecticut with half a page of vague general statement.

Dr. Newman shows how the desires of the Philadelphia Baptist Association, stimulated by Morgan Edwards as early as 1762 and heartily seconded by citizens of Rhode Island, led to the incorporation in 1764 of what was to become Brown University, and the attainment of its first commencement in 1769. But the writer is no less candid in his assertion that, outside of the limited range of the influences which had led to the establishment of the Rhode Island seat of learning, it was true at the beginning of the present century that "the mass of the Baptists were indifferent or hostile to ministerial education," and filled with a "strong prejudice against ministerial salaries." This was especially the case in the South, where, even more than elsewhere, "the large amount of illiteracy in the ministry, and the widespread satisfaction with an illiterate ministry, furnished an obstacle of

the most serious nature to the onward and upward movement that has characterized the recent history of the denomination." This state of affairs was largely altered by the educational and missionary impulses that went out in the second decade of this century from Judson and Rice, so that the Baptist communions, as a whole, have long since taken a different attitude; but Dr. Newman gives an amusing, though in some respects a pathetic, account of the struggle, from 1820 onward, of the more illiterate Baptist parties, especially in Georgia, Alabama, and Tennessee, against the introduction of missions, ministerial education, Sunday-schools, Bible societies, and other "human institutions." This opposition still exists. While on the whole the party of education and progress has gained the upper hand in all the larger subdivisions of the American Baptists, the separation of the Baptist churches of North and South, brought about in 1845 by the question of slavery, has given free play to these elevating forces in the churches of the North.

Dr. Newman's last chapters are the least satisfactory—probably they were written more hurriedly than the earlier portion of his volume; but his work as a whole is a summary of the history of a body of churches which now number at least three and three-quarter millions of communicants in the United States, and which, during the last century, have increased "nearly four times as fast as the population."

Memoir of Sir Andrew Crombie Ramsey. By Sir Archibald Geikie, F.R.S., Director-General of the Geological Survey of Great Britain and Ireland. With portraits. 8vo, pp., viii., 397. Macmillan & Co. 1895.

In no other country is the biographic duty so well recognized or the work of monumenting the worthies so well done as in Great Britain. This Life of Prof. Ramsey introduces the reader to one of the most characteristic men of the admirable lowland Scotch folk. It may be commended to those who are interested in the qualities of peoples, as an exhibition of the conditions and traits which have given the southern Scots their place in the world. Ramsey came of a family of dyers, which for generations pursued that calling in the little town of Haddington. His father found a larger field in Glasgow. In his trade he became noteworthy as a practical chemist, his inventions attracting the attention of such men as Liebig. He left to his son no more than a good name and a distinct aptitude for inquiries in the field of nature. From his mother, Ramsey appears to have inherited the merry humor which so illuminated his nature as to make him one of the most attractive of men.

The poverty of his household after the death of his father cut short his education, so that he did not advance beyond the grammar-school. He became an office-boy and then a partner in a small firm which dealt in cloth. These commercial ventures resulted in complete failures and grievous disappointment, so that at the age of twenty-eight Ramsey was without property or occupation and with a sorry record behind him. Although he had been unsuccessful in his main endeavors, he had a thread of interest and accomplishment which was to lead him out of the darkness. While office-boy and merchant he had the good fortune to make friends among the officers and students of Glasgow University. From these (and they included such men as Prof. Nichol and Lyon Playfair) he, with his ready wit, gained some of the advantages of the University culture, though his poverty deprived him of free access to its resources. To Playfair, then a student and a boarder in his mother's house, Ramsey owed an introduction to Charles Lyell. This master, already famous, led the young man to study the geology of the island of Arran, and so well did he accomplish his task that, on the presentation of his work to the British Association at Glasgow, in 1840, he won recognition from the leaders of the science, and speedily found his way into the service of the Geological Survey of England. This neat turn of his previously unhappy fortunes opened to him a path which he trod firmly, skilfully, and with his merry humor in all its many trials, until he became the head of the greatest scientific establishment of his country, which, at the time of his death, included in its field of labor Ireland and Scotland as well as England.

In his narrative of Ramsey's life as a geologist, Sir Archibald shows the admirable literary talent which characterizes his other works. So far as may be, he leaves the story to be told by letters and extracts from journals; with this he weaves an account of Ramsey's fellow-workers, so that we see the man in his contacts with those who shaped his courses and who in turn were in large measure formed by his influence. With this intention the biographer gives the portraits and somewhat extended sketches of a dozen of the officers of the Survey, and for each of the fifty or more of the other persons mentioned there is a foot-note statement. The incidental description of Sir Henry T. de la Beche, the founder of the Survey, is by far the most lifelike account of the character of that interesting man which has ever been presented.

Although the details of Ramsey's life, engaged as he was altogether in geology, may at first sight seem to have value only to those who are interested in that science, the general reader will find the whole story worth his reading. The quality of the man lifts him well above the professional level into the plane where labor makes for the larger life. In this quality which keeps employment from cramping development, he was a true Scotsman; for more than any other people these lowland folk have acquired the art of combining culture and toil. With Ramsey, as with many other of his countrymen, his enlargement seems to have been due in great measure to his considerable share of the poetic faculty. His versifying power is well shown by the rhymes which he unendingly poured forth, and some of which are reproduced in this volume. Although the most of these are no better than amusing doggerel, there is now and then a stanza which rises to a higher level, showing that the man had a singing spirit. Those who know something of the inner life of the Government scientific corps of Great Britain and this country must have remarked the fact that while the men of the mother country are very tuneful, our own are generally cut off from that resource.

This Life of Ramsey will have especial interest for those who may desire to trace the history of the greatest and most successful scientific establishment in England, and to compare it with the conditions of growth of the corresponding corps in this country. The differences are very striking. The director and other officers of the British Survey, although they are dependent on the votes of Parliament quite as much as the officers of our national Survey depend with us on Congress, appear to be in nowise concerned with the business of legislation. The only reference to Parliament in the index concerns a commission to examine into the matter of building-stones to be used in the new Houses. An equally detailed biography of any director of an American geological survey, State or national, would be filled with references to his unending labors to keep his work from the destructive assaults of legislators.

The best thing that can be said of a biographer is that he has succeeded in so setting forth the character of the man of whom he writes that those who knew his hero find him once again as a living presence before them. Judged by this test, Geikie has certainly done an excellent piece of work. He has perhaps missed the amiable ferocity of speech with which Ramsey was wont to assail his best friends when he disagreed with them—a feature which was apt to make a wrong impression even on those who knew him well, though it was only a mask of the sympathetic nature of this admirable man.

The Arthurian Epic: A Comparative Study of the Cambrian, Breton, and Anglo-Norman Versions of the Story and Tennyson's Idylls of the King. By S. Humphreys Gurteen, M.A., LL.B., Graduate of the University of Cambridge. Putnams.

To characterize so incompetent a book as Mr. Gurteen's 'Arthurian Epic' without appearing to be intemperate in language is a difficult matter. The author's objects are to trace the history of the Arthurian cycle, to demonstrate its essentially religious character, and to examine the 'Idylls of the King' in the light of this demonstration. This serious problem he assails not only without being equipped for the contest, but even without knowing how or where such an equipment is obtainable. The last dozen years have been uncommonly productive of important studies in the "matter of Britain." Of these Mr. Gurteen has apparently never heard. He knows nothing of Rhys, or Förster, or Zimmer, or Gaston Paris. Though he acknowledges obligations to the *Dublin University Magazine*, the *Saturday Review*, *the Englishman's Magazine*, and the *Athenæum*, he nowhere mentions the *Romania* or Gröber's *Zeitschrift*. Sommer's Malory is *terra incognita* to him. Nutt's Grail investigations and their critics have alike escaped his explorations. And these are but instances of what he does not know.

Only an unreasonable critic could expect an author so ill furnished as this to discuss his subject intelligently. Still, we are a little surprised to hear that "it is to the *clergy* of the Anglican Church that we are indebted for nearly all that is of lasting merit" in the Arthur romances. Walter Map, of course, is Mr. Gurteen's mainstay. It was Map, he assures us—Map, "the poet-priest" and "Anglo-Norman *trouvère*"—who "made of detached and fragmentary tales a grand epic cyclus. He it doubtless was who wrote the Latin originals of *Le Roman du Saint Graal* and *Le Roman de Merlin*. It is unquestionable that he was the author of *La Queste del Saint Graal*, *Le Roman de Lancelot du Lac*, and *Le Roman de la Mort Artus*. . . . It is to him we are indebted for the creation of that ideally pure knight, Sir Galahad; in a word, for nearly all that is beautiful, chaste, and imperishable in these romances." To all of which we can only reply with Dominie Sampson's "Prodigious!" Not content with these prodigies, however, Mr. Gurteen presents to his readers Robert de Borron, the Franc-Comtois poet, as a "trouvère" who translated from Walter's Latin

into Anglo-Norman prose. Other "Norman trouvères," contemporary with Walter Map, are Hélie de Borron and Luces de Gast, "authors," Mr. Gurteen tells us, "of the first and second parts, respectively, of *Le Roman de Tristan*." Luces, we are gratified to learn, had a castle near Salisbury. It is also interesting to know that the enormous prose Tristan was "introduced into the series in order to give completeness and symmetry to the epic," and that "it is simply an episode, and in no sense essential to the unity of the narrative."

One of Mr. Gurteen's most trusted authorities is the Vicomte de la Villemarqué. We had supposed that by this time Villemarqué's fabrications were pretty well known in their true character, and that nobody, except perhaps a young student, was in danger of being taken in by his 'Chantes Populaires de la Bretagne.' But we were mistaken. Mr. Gurteen has never heard of Luzel. To him Villemarqué's Breton ballads are precious documents; for him the Vicomte's works "throw all the light that we shall need on the Armorican phase of this famous cyclus." We would fain believe that it is by a misprint that he describes Villemarqué as "a native of *Breton*." But it is not by a misprint that he praises Lady Guest's 'Mabinogion' for its fidelity (Loth's work is of course unknown to him). Nor is it by a misprint that he translates the word Mabinogion by "stories," and ascribes the MS. of this collection to the tenth century (p. 347) and the eleventh (p. 346) instead of to the fourteenth. Other waifs and strays of erudition not chargeable to the type-setter are the citation of *trouvère* as a Norman-French form; the derivation of Anglo-Saxon *scōp* (read *scŏp*) from *scapan;* and the entertaining remark that "*jongleur* is the *prattler*," from "Old French *jongler*, 'to prattle.'" These three notes may all be found at p. 401. *Häide* (p. 31) is simply an ugly misprint for *Haidée*.

By this time our readers will be curious to know what the author has to say of Crestien de Troies, to whom some influence is usually ascribed in the development of the Arthurian cycle. He treats him cavalierly enough, but what he does say is sufficiently remarkable. "While Archdeacon Walter Map was at work on the Arthurian romance in his study at Oxford . . . *le bon père Chrétien* was busy in his cell at Troyes in Brittany, writing the tale of Erec . . . and thus gathering up the crumbs which the plethoric Normans were allowing to fall to the ground." That Mr. Gurteen does not know the date of Map's elevation to the archdeaconship—1197, some thirty years after Crestien's 'Erec' was finished—need not surprise us. As to Troyes, we have always believed it to be in Champagne; but if Mr. Gurteen can prove that it is in Brittany, his discovery will help to settle a number of disputes.

In English literary and linguistic history Mr. Gurteen is scarcely a safer guide than in French and in Celtic. He tells us that "the rough, powerful Saxon . . . broke, volcanic-like, through the crust of French in Layamon, and then disappeared." This is not quite intelligible. Still less clear are the vague utterances that follow concerning a crisis in the relations of the English and French tongues in Great Britain and the triumph of English marked by Malory's translation of the 'Morte Darthur.' So far as we are able to understand these utterances, they are quite wrong. More amusing is a blunder at p. 405, where the author quotes four verses as from "an old poem relating to the death of Turpin." The verses are really from the 'Faerie Queene,' being, in fact, a part of Spenser's account of how Sir Turpine was "baffled."

We have given this futile book more space than it deserves, for we fear that its attractive appearance and the auspices under which it comes out may lead the unwary to consult it trustingly. The best thing the author and the publishers can do with it is to call it in and cancel the whole impression.

The Evolution of Whist. By William Pole, F.R.S. Longmans, Green & Co. 1895.

Dr. Pole's volume will interest persons whom he describes as "earnest students of whist," and will amuse those players for whom other departments of human activity are not all of quite secondary importance. It is divided, like a universal history, into parts, each devoted to an "era," and each subdivided into chapters. There is the primitive, or prehistoric, era, going back into the night of cards, and known to us only by inference; there is the era of Hoyle, when whist was little more than a pastime, but when, owing to players doing their thinking at the table, it might be called an intellectual pastime; there is the "philosophical era," for which Cavendish and the "little school" had done the best part of the thinking once for all; and lastly there is the era of "modern developments," when whist-playing, now reduced to the strict observance of rules that hedge in the play of every card, and justly become the favorite of young ladies and of young men of the correctest form, is as refined as old amontillado, and as dry—and scoffers say, as like to dish-water.

The American Whist League consisted a year ago of 14,000 persons; and they play so well that the immortal Cavendish "has repeatedly declared that the American players possess a general quality of excellence which it has been the habit to attribute only to exceptional persons like Deschapelles, appearing once in an age." When we read this, we wonder whether the next "era" will not see whist brought to something like the ultra-perfection of tit-tat-too. At any rate, it is evident that the existence of 14,000 Deschapelles in this country cannot be due to Americans being 14,000 times as bright as Europeans. It must be, and certainly is, due to the fact that the system of signalling, as well as the known theory of play, has now been so perfected that the successful practice of whist no longer calls for anything like the same high order of intellect—to say nothing of weight of character—that it used to call for forty years ago. Much is made of the extreme difficulty of going through all the mental operations which a hand of whist now demands; and no doubt a certain aptitude is requisite. But it cannot be more difficult than to learn to use a foreign language with fluency, elegance, and accuracy; otherwise, so many persons would not have attained such excellence, and the difficulty seems to be quite similar to that of acquiring a language.

Whist was in 1734 described as a tavern game; but when Hoyle's treatise was published in 1742, it was played in society. On December 2 of that year Horace Walpole (Dr. Pole overlooks this record) writes: "The town is wondrous dull; operas unfrequented, plays not in fashion, amours as old as marriages—in short, nothing but whist! I have not yet learned to play, but I find that I wait in vain for its being left off." When did modern whist begin? Dr. Pole seems to date it from 1843, when the Chevalier von Cöckelbergle-Dützele published a treatise in which he insists upon the union of partners by means of the *Kartensprache*. But the Blue Peter, from which the present game has been developed, was introduced into the Portland Club by Lord Henry Bentinck only between 1851 and 1858. Clay and others, who would probably know, avoid saying that that nobleman *invented* the signal; and its name seems rather to suggest that it was borrowed from the play of the forecastle, in which case it was probably a recrudescence from the ignoble infancy of the game. We are told that its introducer afterwards expressed bitter regret for his act, because it had brought highly successful whist to the level of mean capacities. Clay, too, spoke of its effect in a tone of disparagement. Certainly, whatever justice there may have been in these laments would belong with hundredfold force to disapproval of the American game. Dr. Pole is very judicial in his remarks upon the matter, and feels that there is much to be said on both sides. He admires the new method, but dreads its possible consequences.

The volume (which is provided with an excellent index) is decidedly entertaining, and all the more so because of its intense seriousness.

Chronicles of Border Warfare in Western Virginia. By A. S. Withers. Edited by Reuben E. Thwaites. Cincinnati: Robert Clarke Co. 1895.

This new edition is a very valuable publication. Withers, an eastern Virginian of liberal education, removed in 1827 to the western part of the State, settling in Harrison County, separated by only two others from the Ohio River. It was but thirty-three years since the border warfare there had come to a perpetual end through Gen. Wayne's treaty of Greenville in 1795. All early settlers of middle age could tell him about the closing years of that internecine conflict, in which most of them had had a share, and the nonagenarian first-comers could remember its beginning. The first stories he heard made Mr. Withers crave more, and he soon felt that the details he learned were worthy of the arts preservative, first of writing and then of printing. Accordingly his volume of 318 pages was published in 1831. Every copy had been subscribed for beforehand by those who in person or through kindred had been actors in the long tragedy. The volumes transmitted to their descendants are no doubt still treasured as heirlooms and priceless memorials of ancestral prowess. Hence the work long ago became hard to purchase even at a fabulous price. A new edition was often talked of, but was strangely and fortunately delayed till it fell into the hands best fitted for the work. Mr. Thwaites, the editor, already favorably known by several volumes on our early history, as Secretary of the State Historical Society of Wisconsin was familiar in its archives with the best collection extant of manuscripts throwing side-lights on all the main incidents from first to last of which Mr. Withers had written. The local habitations also of Mr. Withers's chronicles cannot have been so well known to himself from personal observation as they are to Mr. Thwaites, who last year surveyed them, not from Pullman cars or steamboats, but while paddling his own canoe from the upper waters of the Ohio to its mouth. He sometimes interviewed children of those makers of border history who sixty years before had spoken in the ears of Withers, their early chronicler.

The result is such a resurrection of what may be called the Magna Charta of West Virginia that nobody but a bibliomaniac will henceforth care to own the original. The main

facts as detailed in the original are confirmed, except when ascertainable only from documents beyond the author's reach. They bear witness to his painstaking and accuracy. At the same time the instances in which Mr. Thwaites has occasion for correcting, completing, or illustrating some statement are well-nigh as numerous as the pages. Seldom indeed can a caviller, though a Momus, correct the corrector. We notice, however, that according to his reckoning, September, 1782, was *seven* years after September, 1777, which was popularly called the year of three sevens (p. 224). Again, giving the etymology of the pedagogical hash Losantiville, he says that "*os* is Greek for mouth, and *anti* Latin for opposite."

The period which Withers chose for his theme—1764–1795, a thirty years' war—was the true winning of the West. In its first years Indian forays extended to the Susquehanna. After its close they were scarcely known eastward of the Territory of Indiana. Never within so short a time have so large aboriginal armies been gathered, and never have they defeated the whites in three such campaigns as those of Crawford, Harmar, and St. Clair. These operations on a grand scale are not neglected by Mr. Withers, but he is most at home in guerrilla conflicts, in fireside fights, in the scalping or captivity of single families, the burning of their houses and harvests, and the Amazonian heroism of women. No single one of these massacres could decide the result of a campaign, but their number was multitudinous, and they left no corner of the land untouched. Hence, so long as they lasted, thanks to their cumulative influence, the savages continued exultant and triumphant. It was carrying the war into Africa which confined them at home.

We cannot read many pages in Withers without feeling that we have supped full of horrors. It was not in Border nature to make war on savages except savagely—yes, with scalping and treachery. However low in baseness either party sank, the other in that lowest deep opened another yet lower. Each in turn was worst. A boy who had been delighted with 'Robinson Crusoe' burst into tears when he learned that it was not true. Every reader of 'Border Warfare' will weep all the more as he marks how small a fraction Mr. Thwaites's higher criticism is able to abate from its truth. "'Tis true 'tis pity, and pity 'tis 'tis true." The spirit thus engendered and intensified is not yet dead in that Border. It has just now cropped out, infernal as ever, in the Gordon-Brown butchery at Louisville.

In regard to the style of Mr. Withers, critics would find little fault had he been content with a plain tale of truth. We wish that, like modern interviewers, he had set down the very speech of the plain, blunt story-tellers, who spoke right on, and never for a tricksy word defied the matter. In that case we should not read that a man's body was perforated by balls (p. 57), nor of his inhumation and comminations (p. 116), nor of his inhaling the vital fluid (p. 128); perhaps not of his wife and children as partner of his bosom and pledges of their affection (p. 217).

The Historical Geography of the Holy Land, especially in relation to the History of Israel and of the Early Church. By George Adam Smith, D.D. With six maps. A. C. Armstrong & Son. 1894. 8vo, pp. xxv, 692.

To students of the Bible this is an almost indispensable book. It is true that the relation of the geography to the history of Syria and the effects of its varied scenery and climate upon the Hebrew literature have been pointed out by many writers, preëminently by Dean Stanley in his 'Sinai and Palestine.' This has been only incidentally, however, while Dr. Smith has made it the main object of his work. He has also the immense advantage over those who have preceded him of writing in the light of the latest archæological discoveries and the results of recent Biblical criticism, yet cautiously withal: he fully accepts the methods of the "higher" critics and some of their conclusions, but contests others. Many problems he leaves to be solved by further investigations, or, as he happily expresses it in reference to the need of the exploration of the ruins covering the land, "we have run most of the questions to earth: it only remains to dig them up." Though the volume has little resemblance to the ordinary traveller's accounts, it is more than a mere text-book of geography. Occasionally scenes or historical events are regarded from the highest spiritual point of view, and at times in the driest descriptions of physical features there are passages of rare beauty, full of the spirit of the Hebrew poetry.

In the first of the three parts into which the book is divided, there is a general description of the land, its peculiar position as the "bridge" between the great empires of Egypt and Assyria, its shape and varieties of surface and climate, together with the influence which these have had upon its history, literature, and religion. An interesting, though necessarily somewhat vague, chapter contains the general conclusions which the author has reached. Historical geography, he frankly confesses, bears no further testimony to the authenticity or credibility of the Biblical narratives than that there is in them no geographical impossibility. But on the other hand its witness is "high and clear" to the story of the origin and development of the religion of Israel, to the appearance of monotheism, and to the question of the supernatural.

Dr. Smith takes up the land in detail in the second and third parts, beginning with the coast and maritime plain, and closing with an account of the oasis of Damascus. Only the principal features and historical events are described, though there is occasionally a fuller treatment of some special subject, as for instance the position of the well of Sychar, important from the part which it has played in the discussion of the authenticity of St. John's Gospel. But there is no account of the topography or history of Jerusalem, nor of the geography of Lebanon or Phœnicia. The most interesting chapters are those relating to Galilee and the Trans-Jordanic plains. In them is brought vividly before the mind the thronging and varied life of these regions in the early Christian centuries. Nor are the plains now so desolate as we are wont to imagine. Writing of the Hauran, Dr. Smith says: "It is a land of harvests, and, if you traverse it in summer, fills you with the wonder of its wealth." Along the great roads the bells of the camel caravans never cease the night through.

Dr. Smith's descriptions are, as a rule, singularly clear, and he is vague and somewhat hard to follow only when he is striving to express some spiritual thought. Few writers, for instance, have given a better account of the change of scenery and climate in crossing Judea:

"With its palms and shadoofs the Philistine Plain might be a part of the Egyptian Delta; but on the hills of the Shephelah which overlook it, you are in the scenery of southern Europe; the Judæan moors which overlook them are like the barer uplands of central Germany, the shepherds wear sheepskin cloaks and live under stone roofs—sometimes the snow lies deep; a few miles farther east, and you are down on the desert among the Bedouin, with their tents of hair and their cotton clothing; a few miles farther still, and you drop to torrid heat in the Jordan valley; a few miles beyond that, and you rise to the plateau of the Belkâ, where the Arabs say 'the cold is always at home.' Yet from Philistia to the Belkâ is scarcely seventy miles."

For pithiness, this concerning Jericho may be selected:

"She has been called 'the key' and 'the guard-house' of Judea; she was only the pantry. She never stood a siege, and her inhabitants were always running away."

There are several appendices which, with the numerous notes, form a very full *apparatus criticus*, and two indexes; but we miss, what would have been of great value, a list of Biblical passages referred to. The maps are models of beauty, though the spelling of the names does not always agree with that of the text.

Corrected Impressions: Essays on Victorian Writers. By George Saintsbury. New York: Dodd, Mead & Co. 1895.

A DIVERTING little book is Mr. George Saintsbury's 'Corrected Impressions'—almost as good light reading as a clever novel. The papers it contains are of unequal merit, of course; the style, being Mr. Saintsbury's own, is now roughshod, now slipshod; the criticism is seldom very delicate, and makes few discoveries; the habitual self-confidence of the author never deviates into modesty; but all this does not make the book less entertaining. There are sombre patches of dulness, but not many of them. One is in the solemn essay on Mr. William Morris, in whom Mr. Saintsbury sees no faults worth mentioning, and whom he characterizes as the only English *trouvère* since Chaucer. We are used to the serious air of a Morris-worshipper at his devotions, and should think it indecorous, at such a moment, to ask for a definition of *trouvère* or a bill of particulars as to the resemblances between Chaucer and Mr. Morris. Besides, one must not take these papers too seriously. They are the chips and shavings of a professional critic's workbench. Their intent, in the first instance, was to fill so many sheets of copy for two respectable journals, one in India and one in New York. Incidentally, they were meant to picture the changes which years have wrought in the writer's impressions of "Victorian authors." For Mr. Saintsbury rightly divined that such changes in the mind of a veteran critic—even if he were not a critic of the very first rate—would interest most readers.

There is a portrait, too, perhaps to serve as ocular proof that the author is old enough to have changed his mind, perhaps merely to emphasize or justify the frankly egotistical manner of the essays. However meant, the portrait is welcome. Nor is the egotism offensive. Even when the writer informs us, with much gravity, that he is superior to mere literary fashions, we accept the amusing confession with equal gravity, remembering that it is hard to be a modest Boswell to one's own impressions. Less pardonable are some pages of commonplace, until we remember the exigencies of periodical publication.

In calling the volume by name no one should emphasize the word "Corrected." Mr.

Saintsbury has been pretty faithful to his early loves. Perhaps he has changed less than he imagines. Once he makes a comical *saltus:* he has modified his views so often, he argues, that, when he has not modified them, they have an excellent chance of being eternal truths. This is not an excessively shrewd remark, no doubt, but elsewhere there is abundant shrewdness in the book and much good sense and some humor. Above all, it is diverting, and that is a great merit.

Our Town and Some of Its People: Sketches of Fife Folk. By John Menzies. London: T. Fisher Unwin; New York: Putnams.

DIALECT literature obeys the laws of trade like all other commodities of the human brain and hand; and therefore, when once a profitable market has been made, the supply ere long exceeds the demand, and the quality of the article deteriorates. Barrie recreated public taste for certain extreme types of Scotch religious life, but both he and his imitators seem to have exhausted the supply of original characters. 'Our Town' describes, and does it well, the commonplace people of a Fifeshire town a generation ago, before the hamlet was brought within the vortex of the world o' life by the railroad, and machinery had supplanted the hand loom. The picture is not less real because the men and women are not all characters and the incidents narrated of their everyday life are not startling. It may be true that the simplest life contains elements worth telling, but what are worth telling are those hidden springs of action which, if they were recorded in the case of the simplest, might help us to unravel the complex tissue of motives whence originate the actions of the more exalted or more depraved lives. But this unveiling of the inner life is just what simple folk cannot do themselves, and which no one can do for them; and therefore the record of their daily deeds and misdeeds is neither very instructive nor very exhilarating. But it is less dull when expressed in the Scottish tongue or Irish brogue than when the conversations and the actions are told in English vernacular. Humorous and witty turns of thought, native to the people in their own homes and which seem to be lost with the loss of their speech when they emigrate, undoubtedly give a zest to the most ordinary story told in Lowland Scotch or Irish dialect. "Pawkey Dawvit" was not wrong when he lamented over the advent of the railroad, because, as he said:

> "Trains will come and gang, and folk will gang and come in them. Ae place will grow to be like ony ither place. There will be nae preevacy and nae indiveeduality. We'll just come to be a bit o' Edinbro' as Edinbro' is a bit o' Lunnon. You're prood o' your new station wi' its braw slate roof, and Tammie Adam the station-master's fine flooers i' the simmer, an' your gran' railway brig an' high embankment. Amon' them, they'll end Our Toon. Ye can ca' it Their Toon, Onybody's Toon as sune 's ye like."

Railroads, steamboats, the elimination of distance, and the compounding and confounding of peoples, as explained by Pawky Dawvit's philosophy, probably do account for the fact that the Scotch of America are not as humorous, or the Irish as witty, as in their old homes.

Studies in American Education. By Albert Bushnell Hart. Longmans, Green & Co.

THAT a small volume of miscellaneous studies in the national system of education includes an article on the status of athletics in colleges, and gravely lays down as one of three principles for their regulation that they shall be "subordinate to study," is a fact that bears its irony on its face. Of the remaining five articles, "How to Study History" meets such elementary conceptions of the subject that a single appearance (in a number of the *Chautauquan*) might have sufficed for its circulation. "How to Teach History in Secondary Schools," besides insisting forcibly upon the necessity for school libraries, with books of reference "convenient and accessible every day and all day," explains what, at the date of its writing in 1887, were the less understood differences between text-book and topical methods, as well as between historical courses arranged by chronological succession and by the German method of working from within outward, from known conditions to unknown. There are, no doubt, still many sections in which these points need to be made clear. Nevertheless, the study of history has advanced by leaps in the past decade, and methods now actively employed in some of the most advanced schools, for preparing pupils for their own future share in its making, are hardly hinted at here.

The substance of the volume is to be found in the three other essays. One of these sets forth what is feasible to colleges in the way of better instruction for teachers already engaged in their work, and describes at length courses instituted to this end by the writer's own university, Harvard. A cardinal difference between such courses and the familiar "Teachers' Institute" is that the former aim "to get a return in work and thought from the teachers themselves," whereas the function of the latter is to stimulate and suggest, not to supply practice. Thus the Harvard course in English is described as including themes with correction by a reader, while the courses in science have invariably included laboratory work. "Has the Teacher a Profession?" contains a plea, backed by every consideration of common sense, not only for the teacher's previous training, but for his standing as a public servant and an employee of Government. His position, in the latter capacity, is likened to that of a letter-carrier, who is hired, "not retained like lawyers." Freedom from annoying interference in details, "an opportunity to think, to suggest, and to criticise, without our heads rolling off," are two among a number of reasonable requests in behalf of teachers which ought properly to come in the form of demands.

"Reform in the Grammar Schools" is practically an account of the excellent work done by the Cambridge School Board in accomplishing the apparently contradictory ends of shortening the stereotyped course of six years to five or, at need, to four years for bright pupils in "quick-moving" grades, and, at the same time, of enriching the curriculum by the addition of English literature, geometry, physical geography "from a new standpoint," and physics. That these ends could not have been accomplished without the disinterested expenditure of time and ingenuity on the part of School Board and superintendent on the one hand, and the coöperation of Harvard in instructing teachers on the other, need hardly be remarked. Apart from what the articles describing both movements may teach the specialist, they are well adapted to impress on the general reader the facts that the management of grammar-schools is an important subject, that it is an interesting subject, and that it is a subject in regard to which it is worth while to take pains to be on the side of enlightenment and progress.

Family Records and Events, compiled principally from the original manuscripts in the Rutherfurd collection. By Livingston Rutherfurd. New York. Printed at the De Vinne Press. 1894. Tall 8vo, pp. 344.

THE title-page of this book disarms criticism. As a family record it very properly contains matters of great interest to the family, but of slight value to others. For example, the first eighty-three pages are devoted to the Alexanders, because the first of the American Rutherfurds married a sister of William Alexander, the claimant of the dormant Scotch earldom of Stirling. This peerage was conferred by Charles I. on a favorite courtier, Sir William Alexander, whose last descendant in the male line died in 1739. The title has been noteworthy mainly for two reasons—first, because of Alexander's connection with Nova Scotia and the creation of baronets of Nova Scotia; and, secondly, because of the romantic attempts to revive the earldom. Scotch peerages differ from English ones by the remarkable provisions contained in many of the former in favor of remote heirs. Thus, it is generally understood that, on the decease of the last earl in the direct line, the title might devolve upon the nearest heir in the male line of the name. It is also agreed that the heir male of the grandfather of the first earl was William Alexander of New York, whose father, James, came to New York in 1715, married here and died here. This William was usually called Earl of Stirling, and was one of Washington's most faithful generals. He left two daughters only, Mrs. Watts and Mrs. Duer, both with numerous issue, and the peerage claim thereby ceased in this line. Some forty years ago a claimant appeared in Scotland, who pretended a surrender and reissue of the first patent, whereby heirs female were admitted. The case was famous from the remarkable chain of forged evidence presented, though the claimant was not proved to have been the concocter thereof. William, titular Lord Stirling, had four sisters, married respectively to Peter V. B. Livingston, John Stevens, Elisha Parker and Walter Rutherfurd, and John Reid.

Walter Rutherfurd was one of the nineteen children of Sir John Rutherfurd, Knt., of Edgerston, the head of the family of the name. Walter entered the army at an early age, and served in America in 1756, being major of the Royal American regiment. In 1758 he married, as above noted, Katherine Alexander, widow of Elisha Parker. Soon afterwards he retired from the army and devoted himself to the care of his vast estates, having had a grant of five thousand acres in Tryon County, N. J., besides his wife's property; and he maintained a strict neutrality during the Revolutionary war.

John Rutherfurd, only son of Walter, was born in 1760, became a lawyer, and in 1790 was elected United States Senator from New Jersey. He was chosen for a second term, but resigned in 1798. He died in 1840, leaving many descendants by sons and daughters, all duly recorded in this volume.

It is almost unnecessary to add that the family has been of the highest distinction socially for the past century. Wealth, culture, activity, and public spirit ennoble a family even in a republic. A pride in such an ancestry, if it lead to an attempt to maintain hereditary virtues, is one of the strongest pillars in our social edifice. The main interest for the general public in this volume is the collection of family letters. No new facts of importance are brought to light, but the reader will find many items which will give him an

insight into social life a century ago. None of the letters are to be compared with those of Elizabeth Southgate, published in 1888, nor with the charming diary of Anna Green Winslow, reviewed by us last year; but they are pleasant reading. It is to be hoped that documents still remaining in the hands of other noted colonial families will yet be put in print.

BOOKS OF THE WEEK.

A Gender in Satin. [Incognito Library.] Putnams. 50 cents.
Association Littéraire et Artistique Internationale: Son Histoire, Ses Travaux. Paris: Bibliothèque Chacornac.
Barker, J. M. Colleges in America. Cleveland: Cleveland Printing and Publishing Co.
Bergeron, Prof. Eugène. Balzac's Eugénie Grandet. Henry Holt & Co. 80 cents.
Bey, Aleph. That Eurasian. F. T. Neely. $1.25.
Blanc, Madame. The Condition of Woman in the United States. Boston: Roberts Bros. $1.25.

HENRY HOLT & CO., N. Y.

CONCORD.

To Let for the Summer—Hawthorne's

OLD MANSE.

This well-known old Colonial house is comfortably furnished; contains 14 rooms; ample grounds, bordering on the river; garden, stable, etc. Will be let at a low rent for the season to a careful tenant.

J. MURRAY HOWE & BRADLEE,
28 State Street, Boston.

FRANK R. STOCKTON'S NEW NOVEL.

ON MAY 25TH WILL BE PUBLISHED A NEW NOVEL BY MR. STOCKTON, TREATING OF ROMANTIC ADVENTURE, AND PUBLISHED COMPLETE IN BOOK FORM WITHOUT PREVIOUS SERIAL ISSUE.

The Adventures of Captain Horn.

One Volume. Cloth, 12mo, $1.50.

A story unlike any novel that has hitherto appeared from this popular author's pen. It is a romance of the most adventurous kind, whose events, born of Mr. Stockton's imagination, are wholly extraordinary, and yet, through the author's ingenuity, appear altogether real. That Captain Horn's adventures are varied may be inferred from the fact that they extend from Patagonia to Maine and from San Francisco to France, and include the most remarkable episodes and marvellous experiences, all of which are woven together by the pleasing thread of a love-story, and brightened by the gleam of Mr. Stockton's fanciful humor.

CHARLES SCRIBNER'S SONS,

153-157 Fifth Ave., New York.

YALE MIXTURE.

The choicest tobacco made, and pre-eminently a gentleman's smoke.

Marburg Bros., The American Tobacco Co., Successor, Baltimore, Md.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

School of Drawing and Painting

MUSEUM OF FINE ARTS.

Copley Square, Boston, Mass.

(TWENTIETH YEAR.)

The Fall Term will Open September 30.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell, and Philip Hale (Drawing and Painting), Mrs William Stone (Decorative Design), B. L. Pratt (Modelling), E. W. Emerson, (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum For circulars giving detailed information, address

Miss ELIZABETH LOMBARD, Manager.

UNIVERSITY OF MICHIGAN

SUMMER SCHOOL.

During the Summer of 1895, from July 8 till Aug. 16, courses of instruction will be given in Latin, French, German, English Literature, English Language and Composition, Philosophy, Mathematics, Physics, Chemistry, Astronomy, Biology, Drawing and Machine Design, Surveying, Civil Engineering, Histology, Botany, Music, and Law.

Tuition rates will be as follows: One course, $15.00; two courses by the same student, $25.00; three courses, *ditto*, $30.00.

Cost of board and rooms will vary from $3.00 to $5.00 a week.

For announcement containing full information, address

JAMES H. WADE,
Secretary of the University of Michigan,
ANN ARBOR, MICHIGAN.

Cheltenham Military Academy.

In all respects one of the best preparatory schools in the East. Represented by its graduates in YALE, HARVARD, PRINCETON, CORNELL, TROY, POLYTECHNIC, LEHIGH, LAFAYETTE, and UNIV. OF PA. $600 per year; no extras. Send for illustrated circular. Ogontz, near Philada., Pa. JOHN C. RICE, Ph.D., Principal.

NEW HAMPSHIRE.—Summer School, Camp Content, White Mountain Branch of Hempstead Institute. E. HINDS, Littleton, N. H.

Teachers, etc.

A LADY EXPERIENCED IN THE work will take charge of a party during the summer, with headquarters at her seaside cottage near New York. Educational advantages are offered by means of trips to the harbor, shipping, forts, museums, art exhibits, etc., in and about the city, and excursions up the Hudson and into New England, to include geology, history, botany, etc. Cultured society, excellent references. Address for particulars,

EDUCATION, the *Nation.*

AN EXPERIENCED TEACHER, LIV- ing within easy distance of Boston, would like to receive into her home for the summer a number of young ladies. Excursions to points of historical interest will be made a specialty. For particulars, address "A.," care of the *Nation.*

WANTED.—COUNTRY BOARD FOR the summer in the Eastern or Middle States, in return for two hours' daily instruction by an experienced teacher of History and English. Address

Miss S., *Nation.*

WANTED—BY AN EXPERIENCED teacher in English, German, French, and Music a position for the summer months as teacher, governess, or travelling companion. References exchanged. S., 3420 Race St., W. Philadelphia.

A YOUNG LADY OF GOOD FAMILY, speaking French and German fluently, would like position as companion to lady going abroad. Would be generally useful. Small salary. References exchanged. Address S. T., care of the *Nation.*

A PH.D. (Univ. of Mich.) IN ECONO- mics, Sociology, and History desires a position in college or university. Five years' experience. Studied abroad. Best references. Address "C.," care of *Nation.*

HARVARD GRADUATE, EXPERI- enced tutor, desires pupils for summer. Home, seashore, or travel. Careful, thorough work for entrance examinations. Very best references.

R. S., care *Nation.*

A JOHNS HOPKINS GRADUATE student wishes a private pupil for the summer. Good references given concerning such work. Address F., Box 461, Johns Hopkins University.

IDA M. METCALF, M.S., Ph.D., will, during the summer, tutor a few pupils at a quiet place on the Maine coast. College preparatory and more advanced work 52 Jefferson Ave., Brooklyn, N. Y.

A YOUNG LADY STUDENT OF Wesleyan University desires a situation to tutor preparatory to college, or as home or travelling companion. Address Box 836, Middletown, Conn.

A HARVARD SOPHOMORE Intending to spend the vacation in Colorado would like to take one or two pupils with him. Best references. Address J. E. G., Matthews 25, Cambridge, Mass.

The Meaning and the Method of Life.

A SEARCH FOR RELIGION IN BIOLOGY.

BY GEORGE M. GOULD, A.M., M.D.

207 Pages. Price, $1.75.

"The work opens up an entirely new field in the study of the phenomena of life. . . . It is a strange work, in which those who wish may see how an able and industrious mind can deal with a most absorbing subject without creating one angry impression or suggesting one phase that by the so-called reverent can be considered subversive of reverence."
—SIR BENJAMIN WARD RICHARDSON.

"The genuine biologist's religion, truly a religion and no sham."—*The Nation.*

"An excellent cosmical romance, rather than a reasoned philosophical doctrine. But cosmical romances are works of art that few can write. The air of unique experience can be but faintly suggested by this review."
—PROFESSOR JOSIAH ROYCE.

"These somewhat startling theories should acquit the author of the sin of mental plagiarism, for they are the unique product of his own brain."—*New York Tribune.*

Sent, mail prepaid, on receipt of price.

NEW YORK: G. P. PUTNAM'S SONS.

Teachers, etc.

MR. KENYON COX will take a limited number of pupils for the summer months in the Berkshires. Address 75 W. 55th St., New York.

WANTED.—A gentleman of literary cul- ture wishes a position as assistant in a public library. RANDOLPH, care of Nation.

A CLERGYMAN WOULD LIKE TO take four boys to the Alps this summer. Apply to S. H. B., *Nation.*

HARVARD—Tutoring for Admission.— H. H. BROGAN, Ph.D., 858 Main St., Cambridge.

CHARLES W. STONE, Tutor for Har- vard, 68 Chestnut Street, Boston.

School Agencies.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Place, Boston; 70 Fifth Ave., N. Y.; 355 Wabash Ave., Chicago; 32 Church Street, Toronto; 803 Twelfth Street Washington, D. C.; 120½ South Spring Street, Los Angeles. Agency Manual free.

EVERETT O FISKE & Co.

AMERICAN AND FOREIGN TEACH- ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to

Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

THE ALBERT & CLARK TEACHERS' AGENCY, CHICAGO, 211 Wabash Ave.—C. J. ALBERT and B. F. CLARK. Northwestern Office, Marshalltown, Iowa, C. P. Rogers. Good vacancies in Western colleges and normal schools.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

COLLEGES, SCHOOLS, FAMILIES sup- plied. Teachers placed. Schools conscientiously recommended to parents. Musical Department.

MIRIAM COYRIERE AGENCY, 150 5th Ave., N.Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855 3 East 14th St., N. Y.

AN AGENCY is valuable in proportion to its influence. If it merely hears of vacancies and tells you about them THAT it is something, but if it is asked to recommend a teacher and recommends you, that is more. Ours RECOMMENDS

C. W. BARDEEN, Syracuse, N. Y.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies: also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Tours.

EUROPEAN SUMMER RESORT.

INNSBRUCK, TYROL, AUSTRIA.

Fine Hospial, and all modern advantages. 1,900 feet above the sea, with dry, bracing climate. Centre for Coaching and Hunting Trips, National Festivals, Music, etc.

HOTEL TIROL.

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; elevator, electric light, etc.; superior cuisine. EXCURSIONS OF ALL KINDS A SPECIALTY. Best references. Illustrated pamphlets sent on application.

MRS. M. D. FRAZAR'S

EUROPEAN PARTIES.

(EIGHTH SEASON.)

June 8, tour of 56 days; June 29, tour of 64 days; June 29, tour of 87 days, and July 13, 42 days. Comprehensive and delightful routes.

Send for descriptive book and reference.

Mrs. M. D. FRAZAR & CO.,
70 and 71 Globe Building, Boston, Mass.

MT. DESERT

[P. O., Seal Harbor], house, furnished, $250; occupied previous seasons by Dartmouth and Hopkins professors; has bath-room, with hot and cold water (no pumping needed).

W. M. GRISWOLD, Cambridge, Mass.

FOR SALE OR TO RENT.

Mrs. Head's School for Young Ladies and little Girls, 104 West Chelten Avenue, Germantown, Philadelphia, Pa. Accommodation for 125 pupils. Large assembly-room, and a gymnasium.

FURNISHED ROOMS TO RENT AT "COLUMBIA CHAMBERS," 113 COLUMBIA HEIGHTS, Brooklyn, for GENTLEMEN who can appreciate good air and quiet, refined surroundings. Convenient to N. Y. by ferry. Prices moderate.

TO LET FOR THE SEASON in Barre, Mass.—Fine old mansion, fully furnished, ample grounds, stable, tennis court, etc., in perfect order. Beautiful scenery and drives. Apply

F. B. HILL, 45 Wall St., N. Y.

TO RENT—AT NORTH EAST HAR- bour, Maine, a very desirable cottage, opposite the Harbourside Club; fully furnished. Rent moderate. Apply to 1413 Locust St., Philadelphia.

FURNISHED COTTAGE—PROUT'S Neck—Ten miles from Portland, Maine. Address F. Moss, 49 W. 24th St., N. Y.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

The Nation.

NEW YORK, THURSDAY, MAY 30, 1895.

The Week.

When President Cleveland last summer assumed the power to order federal troops into a State without a request from its Governor, and even against the latter's protest, in order to stop obstruction of the mails and interference with interstate commerce, Judge Cooley of Michigan expressed the opinion that "a great and valuable lesson in constitutional construction has been settled for all time." This opinion has been justified by the unanimous decision of the United States Supreme Court in the Debs case on Monday, fully endorsing the course taken by the President, and asserting the supreme power of the federal Government in such an emergency. The equity jurisdiction of the federal courts has been so enlarged as to make the injunction a writ of general application, which may be used by the courts even for police purposes. The action of the Executive was warmly approved at the time by the legislative department of the Government and by the people of the nation. Now that it is endorsed without the slightest qualification by the judicial department, a precedent has been established which can never be questioned. Debs, Altgeld & Co. have thus unconsciously rendered the country a great service by their course last year, for it is an immense gain to have so important a principle of constitutional construction definitely settled.

The decision contains one passage which should be studied with attention by the labor organizations of the country. It is pointed out that the right of any laborer or of any number of laborers to quit work was not challenged, and that the only object of the proceedings against Debs and his fellow-conspirators was to restrain forcible occupation of the highways along which interstate commerce and the mails are carried. The decision proceeds:

> "A most earnest and eloquent appeal was made to us in eulogy of the heroic spirit of those who threw up their employment and gave up their means of earning a livelihood, not in defence of their own rights, but in sympathy for and to assist others whom they believed to be wronged. We yield to none in our admiration of any act of heroism or self-sacrifice, but we may be permitted to add that it is a lesson which cannot be learned too soon or too thoroughly, that, under this government of and by the people, the means of redress of all wrong are through the courts and the ballot-box, and that no wrong, real or fancied, carries with it legal warrant to invite, as a means of redress, the coöperation of a mob, with its accompanying acts of violence."

As every great strike, like this "sympathetic" strike of the railroad men last summer in aid of the Pullman employees, always involves "acts of violence," it is well to have notice thus served by the highest tribunal of the land that the whole power of the Government may lawfully be invoked to suppress such violence, and that redress must be sought only through the courts and the ballot-box.

Senator Hill's impudence in accepting congratulations on the defeat of the income tax is colossal. He is responsible for the fact that in the most momentous case for the city and State of New York which has ever come before the Supreme Court—a case which most seriously affected its commercial interests—the State had no representative upon the bench. He did all that he could do to make the decision impossible. Then, too, while he opposed the law in the Senate, he had not the courage to say a word against it when he took the field as candidate for Governor immediately after its passage. He was dumb as an oyster about it in all his speeches. Yet now he says, in returning thanks for congratulations on its death: "The country more than myself is to be congratulated upon its relief from an inquisitorial, unjust, and socialistic law."

The fact that the State Senators who are chosen this year will vote for a successor to Mr. Hill in the United States Senate adds greatly to the importance of the election. It may be taken for granted that Hill is already at work in his own behalf, and that he will leave nothing undone to control the succession. The Republicans will have to watch both him and Tom Platt, for the two will make a "deal" for mutual benefit if necessary. Under the new Constitution the Senators elected this year will hold office for three years instead of two, that length of term being necessary in order to bring about the separation of municipal elections. It is, therefore, of the first importance that the best attainable men be put in nomination, for if the old jobbers who have made reform legislation so difficult during the past few years succeed in getting returned for three years more, we shall be in a hopeless condition for all that period.

The Memphis sound-money convention has turned out a much greater success than even its friends anticipated. A thousand delegates, an audience of five thousand people, and immense enthusiasm are the chief features of the newspaper reports. The speeches added to the éclat of the occasion. The platform adopted is admirably in keeping with the spirit of the movement. It abandons all disguises, subterfuges, compromises, and, in default of international action, declares for the gold standard. There is no more talk about "not discriminating against silver." That has been the shibboleth of cowards and trimmers in both parties for the past fifteen years, despite the fact that we have been discriminating against it all that time, and are doing so still. Unless the mint receives silver from all persons in unlimited quantity, and wherever mined, and coins it for the account and benefit of the owners, exactly as it receives gold, it discriminates against silver. Buying silver in limited quantities and coining it for account of the Government is itself discrimination. This is one of the few truths stated in 'Coin's Financial School.' Yet the Government was discriminating in exactly this way until 1893, when the Sherman act was repealed, and all the efforts made by Bland, Stewart, and others in Congress to put an end to discrimination by enacting free coinage failed completely. Yet the politicians have been urging each other all the time to stop discriminating and telling the people that they were on the point of doing so.

The Memphis platform is commendable in other respects. It proposes to retire all circulating notes smaller than ten dollars except silver certificates, in order to make room for silver dollars and silver certificates. We have got these dollars on hand and we must do something with them. This is probably the best disposition to make of them at present, *i. e.*, to create a vacuum for them to fill. By and by, when the public mind is cured of its hallucinations, and when we can all look at silver as a metal and not as a Dulcinea in the grasp of a giant, some other disposition may be made of the mass which now fills the vaults of the Treasury. The resolution which was adopted in commendation of the "unflagging courage and sturdy patriotism of President Cleveland" was appropriately reserved to the last, and was greeted with tumultuous applause by the audience and delegates. This demonstration proves again for the hundredth time that the people are with him, and that they believe in him all the more as the politicians oppose him and try to insult him. The last Congress can read the obituary that the people have prepared for them in this resolution of the Memphis convention.

The leading Republican organ helps on the cause of sound money and business revival by carefully concealing its own opinions and throwing cold water on the movement to fight financial error in the South. Secretary Carlisle cannot really believe what he is saying, as its long extracts from his silver speeches show. Nobody but a Republican is privileged to change his mind on the silver question. Then what folly it is for Mr.

Carlisle to talk about plans to retire the greenbacks and substitute for them silver certificates. These last are "liable to depreciate," whereas the greenbacks have the good faith and resources of the nation pledged to redeem them in gold. No more than the silver certificates have. The day that only fifty cents could be got for a silver certificate for one dollar, not a cent could be got for a greenback dollar; for that would be the day of the Government's bankruptcy. Its good faith and resources are no more behind one class of paper currency than they are behind another; but the silver certificates have behind them, in addition, fifty cents' worth of silver which the holder can get even if the worst comes. The *Tribune's* proposition, put into the language of business, is that it is "safer" to have out demand notes for a dollar, with nothing in bank to pay them with, than to have out an equal number of notes with ready money on hand sufficient to pay off 50 per cent. of them.

Chairman Carter of the Republican national committee does not seem to understand the sentiment of the Northwest on the silver question. He was in New York last week declaring that there are fifty-nine electoral votes in that part of the country that will "hang in the balance on the silver question." Of course, the four from Oregon are included in this total, but the action of the State convention of Republican League clubs shows that there is no warrant for the claim. A sound-money delegation was elected to the national convention by a large majority after a contest with the free-coinage men, and, as the silver craze is now subsiding everywhere, there seems no reason to doubt that Oregon may hereafter be counted with confidence on the right side of the financial question. Washington is another State with four electoral votes which cannot any longer be set down as sure for the free-coinage side. Its Governor, like those of other States in that section, received an invitation to appoint delegates to the recent convention of silverites at Salt Lake City, but he refused to comply with this suggestion from the Governor of Montana, who took the initiative in the matter. Gov. McGraw declared his belief that free coinage means silver monometallism, and would be fraught with peril to the business and industry of the country, and for this reason he would not lend any favor whatever to the Salt Lake scheme, although a weaker man in his place might have pleaded the free-coinage plank in the last State platform of his party as excusing the appointment of delegates. The silver mines of Washington are of trifling importance compared with the other interests of the State, and consequently it has no such local motives for yielding to the silver craze as Montana or Colorado. Apparently the movement has gained headway chiefly because so far nobody has fought it, and the open opposition of Gov. McGraw may easily prove all that was needed to turn the tide.

International bimetallism is rapidly assuming the appearance of an international will-o'-the-wisp. The German Ministry now announce, and get the lower house of the Prussian Diet to vote, that nothing can be done for silver in an international way without the assent and coöperation of Great Britain. That means that nothing can be done at all. The chances now are that no conference will be called, even for academic discussion. The international dodge has never been anything more than a pretty toy to amuse certain restless minds and keep them out of mischief; but it is now so thoroughly worn out that even they will not play with it much longer. International bimetallists will soon appear very like international arithmeticians who should maintain that, while within the bounds of any one country it was impossible to make two equal to four, by attacking the problem in an international way the trick could be done.

The full text of the currency bill which lately passed both houses of the Chilian Congress is published in the last bulletin of the Bureau of American Republics. What the law really does is to take Chili out of the ruck of silver-standard nations. The "monetary unit" is declared by article 16 to be the gold dollar. Silver is to be coined, but is not to be a legal-tender for sums greater than $50, and the "ratio" is enough to bring tears to the hardest bimetallist cheek. It is fixed at a little more than 33⅓ to 1—in other words, at about the present market rate. It would appear that the Chilians in this silver business are students of markets, not of maxims—at least not of those maxims which deal with ratios, natural, climbing, historic, constitutional, or other. Their action would be another blow to bimetallism, were it not for the happy consideration that it was probably taken at the instigation of England. Chili's business relations with Great Britain are unusually close, and what British policy will do in the interest of gold we all know. We need but give the hint to Senator Morgan; he will explain the whole devilish business. That is one great blessing of the drift of the civilized world to the gold standard. As country after country goes over, its business is at once put on a stable foundation and all mercantile interests satisfied, and at the same time the bimetallists are left free to lay it all to the greed of England, at whom they can make faces and shake their fists more furiously than ever. While this resource is left them they cannot be wholly cast down.

The estimates of the Director of the Mint of the gold production of the world for the year 1894 are now complete, and they show a total output of $172,000,000. This is $2,000,000 larger than the provisional estimate. The figures for several recent years are as follows:

1890	118,848,000	1893	157,228,000
1891	130,650,000	1894	172,000,000
1892	146,297,000		

It is believed that this ratio of increase will continue during the next four years and until the annual production reaches $225,000,000, and that it will continue at that figure for at least ten years.

Great are the naval regulations. Under them Admiral Meade could not be court-martialled for a newspaper interview grossly insubordinate in tone. As he refused either to affirm or deny the interview, and as the reporter did not come forward voluntarily to testify against him, nothing could be done. All the sea-lawyers held that the interview could in no way be put in evidence. It was as though it never had been. But, though destroyed for court-martial purposes, it was still good for purposes of reprimand. The Admiral's commander-in-chief retires him from the navy, according to his request, but with a severe censure, based on the interview. Admiral Meade does not protest against the censure; if he did, he would have either to acknowledge or repudiate the interview and bring himself within the reach of a court-martial. So his silence is secured, at any rate, as is also that of the other naval officers, who have withstood the blandishments of reporters with unaccustomed firmness since they discovered how much more dangerous to them the pen might be than the sword. The whole incident is a queer illustration of the way red tape sometimes gets the better of common sense, yet its total effect on the discipline of the navy will doubtless be salutary.

The latest extension of the civil-service system by the President brings under the operation of the rules all of the employees of the Agricultural Department except half-a-dozen of the highest officials and the laborers and charwomen—in all, nearly five hundred persons. The chief significance of the action is in the evidence which it furnishes that Mr. Cleveland intends to continue throughout the remainder of his term the extension of the system in various directions, so that the number of places open to a "clean sweep" in 1897 will be far smaller than it was in 1893. Partisan considerations will strengthen Mr. Cleveland's natural disposition in this direction, as the prospect of a Republican victory in 1896 will incline Democrats to protect so far as possible the men whom they have succeeded in getting into office. There is consequently no motive for any protest from his own party, while the Republicans cannot afford to denounce his course. Indeed, the spoilsmen now so generally recognize the hopelessness of any further

opposition that these extensions of the system pass almost without a comment.

The hullabaloo in South Carolina over the decision of Judge Goff declaring the State's registration laws unconstitutional is subsiding, and the people are evidently disgusted with the boyish talk of Gov. Evans about revolution. Even the leaders of his faction are virtually repudiating his attitude, and Senator Irby has come out in advocacy of the extra session of the Legislature which Gov. Evans at first declared he would never call. Such a session could pass a valid registration law, and thus insure a quiet and peaceable election, and Senator Irby declares that to secure these ends the State can well afford the few thousand dollars that a meeting of the lawmakers would cost. An interesting contribution to the current discussion is a letter from Wade Hampton, who, as Democratic candidate for Governor in 1876, led in the "redemption" of South Carolina from the coalition of negroes and carpetbaggers, declaring that he has "no fear of negro domination," confessing that "the negroes have acted of late with rare moderation and liberality," holding that, if the conservative whites meet them in the same spirit they have shown, they will aid in selecting good men for the Constitutional Convention, and making this manly declaration:

> "I, for one, am willing to trust them, and they ask only the rights guaranteed to them by the Constitution of the United States and that of our own State. 'Corruption wins not more than honesty,' and I advocate perfect honesty, for defeat on that line is better than victory by fraud."

The Presbyterian Assembly decides that it will not take doctrine from rich New Yorkers, but will take as much money as they please to give. It had been a favorite theory with some of the Western conservatives that the reason the missionary boards were so heavily in debt was that the Briggs element in New York had too much to do with their management. Thoroughly orthodox givers would think twice before sending money to the heathen through directors who had any doubts about the comfortable Westminster views of heathen damnation. Get the Briggs men off the boards, and there would be money enough. So said the Western men, and proposed to veto the reëlection of all liberal trustees. But Dr. Hall came to the rescue, and showed that this Western idea of finance in the religious world was about as wild as some of the financial ideas in the political world which have come from the same quarter. It was a queer way to extinguish debt, he said, to alienate the contributions of the most generous givers. Alienate no man who has a dollar to give us, he pleaded, and the Assembly rose as one man to that sentiment, and unanimously reëlected the Briggs trustees—heresy, dollars, and all.

The Assembly's deliverance against Union Seminary on Thursday was intended to "tie it up" more completely than ever, to use the language which such boycotting action naturally suggests, but really adds little to what had been done before. Union students can no longer be received "under the care" of Presbyteries, which means that they cannot obtain pecuniary aid from the church in the course of their theological education. But this appeal to the nobler instincts of generous youth has already been blocked by the rich friends of the seminary, who have authorized the faculty to say that students will not be allowed to suffer in their finances by the church boycott. So the heretics will still be kept comfortably in funds. On the other hand, as the Assembly itself has to admit, a young man applying for entrance into the Presbyterian ministry "should stand on his merits as revealed by examination." Thus the boycott will be no boycott at all if the students make orthodox answers. They are shrewd enough to see that; and any of them who might be base enough to be frightened away from Union by the Assembly's monetary threat would have no difficulty in devising a theology to suit their examiners. Indeed, we seem to have observed in some Union candidates for the ministry a sort of wicked delight in making themselves out more orthodox than the Pope, as men who had passed through the flames of heresy without leaving so much as the smell of fire on their garments. In view of such possibilities, and of the large patronage which the seminary has had, and will probably have in greater measure in the future, from young men of an independent and scholarly turn, who do not dodge at every flash of theological lightning, it is not surprising that the Union authorities look upon this latest action of the Assembly with comparative indifference.

We cannot account for the cold reception given the new Formosan republic in this country. Where are the enthusiastic "Greetings to Formosa!" and the loud calls for a man at Washington who would just step up to the Old World and say right here that the United States would not see republican institutions crushed out? Surely all the alert Jingo editors cannot have sailed for Europe. Formosa would make a far better republic than Hawaii. To start with, she has 1,500,000 inhabitants, to Hawaii's 90,000, and presumably, therefore, fifteen times as many voters in need of representation. There is also a delightful variety of languages spoken, one district alone being reported by a missionary to boast eight different and mutually unintelligible dialects. There we have at once eight different "votes" to be swung for candidates, and what qualification for republican government can be more fundamental than that? Moreover, if Hawaii must be a republic because it is a "key," Formosa should be one, *à fortiori*, because it is a "bridge," or at least one pier in a bridge across the sea which we cannot basely sit down and leave in the hands of profane monarchists. Really, the Jingoes will be violently suspected of sleeping on the ramparts of liberty unless they speedily give their all-hail to the new sister republic.

A little while ago the London and Northwestern Railway Company deemed it advisable to change the duties of a number of its work-people in Wales who speak only the Welsh language. This was done in the interest of safe travel, as it was deemed unwise to allow men who could not speak English to be left alone in responsible positions in connection with the working of trains. In Wales, however, there is a strong national feeling. The new radicalism is also strong and active there, and as a consequence the Welsh members of the House of Commons became greatly worked up over the treatment of the Welsh section hands, and determined that, if Parliament could bring it about, they should be all reinstated. First of all, the Welsh members delayed for two weeks a bill giving the London and Northwestern Company parliamentary powers to enlarge one of their junction stations, and carry out some other necessary improvements. They did not, however, fully succeed in these "striker" tactics, and they then next moved for a select committee to inquire into the conduct of the railway company, on the ground that railway companies are in the enjoyment of powers derived from Parliament, and are necessarily within its jurisdiction on questions concerning labor. Old members of the House of Commons were startled when they read the terms of the resolution, and Mr. Balfour appealed to the Speaker to know whether it was in order. The Speaker admitted that there was no precedent for it. Further than that he would not go, and as a consequence of this ruling an entire evening sitting of the House was devoted to a discussion concerning the London and Northwestern Railway and its Welsh-speaking section hands. In the end it was proved to the satisfaction of the House that the company had in no wise treated its men with harshness, and that the changing about of the men who could not understand English had really been for the safety of the travelling public. The upshot of the debate is only a small matter. What is important is the fact that a precedent has been established of far-reaching import, in view of the large and varied industries which an adroit parliamentarian, eager to be on the side of labor, can bring within the purview of the House, on a pretext like that put forward in the case of the London and Northwestern Railway. The incident is noteworthy as an indication of the lively pace at which labor politics are moving in England and the direction which they are taking.

SECRETARY GRESHAM.

No estimate of the late Mr. Gresham's conduct of the State Department should begin without weighing the enormous difficulties which confronted him. The first and greatest of these was the need of recovering for the department its ancient and traditional American spirit and policy. In other words, he had to undo the demoralization wrought directly by Mr. Blaine, and indirectly, and perhaps still more powerfully, by what may be called the Blaine legend. For there was always a legendary Blaine coexisting with the real Blaine. The real Blaine wandered far enough from the precedents set by Webster, and Marcy, and Seward, and Fish, but it was the legendary and unreal Blaine who did most of the mischief. The real Blaine conducted the Italian dispute in a correct and dignified manner, and knuckled under to Great Britain in the Bering Sea matter gracefully enough when the pinch came; and it was only the imaginary Blaine who was always taking the hated foreigner by the beard, making stump speeches to lords and potentates, and aiming the big guns. But it was the latter personality that had dominated and demoralized the State Department, filled the heads of flighty naval officers with visions of war, and created and fostered in weak and silly minds throughout the country the idea that national greatness meant national quarrelsomeness and bluster.

To change all this, and to walk in the dignified ways of Evarts and Frelinghuysen and Bayard, was Mr. Gresham's main and most difficult task. That he should be ferociously attacked while essaying it was inevitable. He was not only reversing the Blaine policy, he was doing it as a Republican who had opposed Blaine—was doing it, to fill up the cup of his iniquity, as a Republican under a Democratic President. It took no gift of prophecy to foresee, and we presume that Mr. Gresham foresaw as clearly as anybody, that he would be damned if he did and damned if he didn't. The savage and senseless attacks upon him by the inheritors and expounders of the Blaine legend could not have surprised him, and apparently did not disturb him. The very fury of his assailants was their own undoing and his safety. American humor came to his rescue, and refused to do anything except smile at the supernatural imbecility and consistently craven spirit of the newspaper Secretary of State.

Meanwhile the actual Secretary went on his way, and fairly earned the praise bestowed upon him by eminent jurists and experts in international law as the ablest Secretary the country has had since Hamilton Fish. Equally deserving has he proved himself of the thanks of Americans who see something to arouse national pride in a dignified and courteous conduct of our foreign relations. It is a great thing to have had two years of a Secretary who wrote his despatches with his eye wholly on the business in hand, with a desire chiefly to know what the facts and what the law were, and to state his views in a quiet and gentlemanly way, instead of one who was always thinking, as he wrote, how much his "sass" of Lord Salisbury would tickle the mining-camps and the bar-rooms, and who thought that diplomatic usage, maps, treaties, and international law were all useless rubbish for an enterprising statesman. Judged by the international standard (and that is the standard by which a Secretary of State should be chiefly judged), Mr. Gresham has been a great success, and has made American honor, capacity, and courtesy mean more in the eyes of the world than they had seemed to mean for many a day.

By the test, too, of actual accomplishment his two years' service will rank with any like period for a generation. As his professional maligners are, as usual, shy of the facts, it may be well to give succinctly the list of his diplomatic achievements. First of these comes his scornful refusal to profit by fraud and collusion in Hawaii, and his high and firm assertion that there was not one standard of honor for an individual and another for a nation. That action, it is safe to say, has given the best minds of Europe, whose praise and good opinion are worth any nation's seeking, a conception of the possibilities of a nice sense of honor and justice in a democracy wholly new to them. Mr. Gresham carried successfully through the period of negotiation and ratification a complicated and important treaty with China. Equally important is his treaty with Japan, covering many vexed questions of extraterritoriality and citizenship. Through his friendly representations Great Britain has been induced finally and for ever to relinquish her protectorate over the Mosquito Coast, thus ending a tedious controversy which had plagued the department from the days of Marcy down. In all these matters, and in his sharp rebukes of American ministers whom our vicious political system had saddled upon him, and who were disgracing the country abroad by their ignorance and indecency, he has borne himself as one worthy of the best traditions of his office.

His personal bearing has been excellent throughout. He has not been a newspaper correspondents' Secretary, and hence, no doubt, the wounds, subject to weekly reopening, which some of them carry on their persons. But in informing the public of the state of negotiations and of the real questions at issue, he has been frank, and has done excellent service in the cause of educating the people in international relations and regulations. His quiet circulation of the text of the Monroe doctrine, with explanations of its origin and meaning, was a shrewd stroke, and certainly closed many a blatant mouth. All told, the work he did even in the career now prematurely closed was of a sort to win him the good opinion of all his countrymen whose respect is worth having, and to mark him out as a most useful public servant. President Cleveland will find it hard, if not impossible, to obtain a successor equal to him; but one thing can be and should be made certain, that his successor, whoever he may be, shall be a man who, like Mr. Gresham, will walk in the beaten and honorable path of American diplomacy, and not go wandering in the by and forbidden ways of ignorant bullying that thinks itself statesmanship.

FEDERAL JUDGES AND STATE LAWS.

THE recent decision of Judge Goff in the United States Circuit Court at Columbia declaring unconstitutional the registration laws of South Carolina has been generally treated as a novel and unprecedented attempt at interference with State elections by the federal judiciary. The fact has been overlooked that a similar decision was rendered with reference to the registration laws of Georgia by Judge Speer of the United States District Court three years ago, and that this judgment was accepted and acted upon by the State. The federal election laws were then on the statute-book, and the case brought before Judge Speer grew out of an application for the appointment of supervisors of the election for Presidential electors and Representatives in Congress for Wilkinson and Richmond Counties. These laws having since been repealed, so much of the decision as pertains to their scope and application is no longer of any importance. But a vital portion of it concerns only the Constitution and laws of Georgia, and the Judge's ruling upon these points is not affected by the repeal of the federal election laws.

The Constitution of Georgia provides that every male citizen of the United States (except idiots, insane persons, and the other usually excepted classes), twenty-one years of age, who has resided in the State one year before an election and in the county for six months, and has paid his taxes, "shall be deemed an elector." It further declares that "the General Assembly may provide from time to time for the registration of all electors." Under these provisions Judge Speer held that it was within the power of the Legislature to require a registration of voters for an election for Presidential electors and Representatives in Congress, as well as for State officers—the federal Constitution providing that the electors of the national House of Representatives in each State "shall have the qualifications requisite for electors of the most numerous branch of the State Legislature." This registration, he said, would be operative upon all the voters in the State at such elections.

The grave matter for consideration in this case was whether the State of Georgia had required a registration of this cha-

racter. There were at the time local registration acts for many different counties of the State, as various as they were numerous. Did these many local acts constitute such a "registration of all electors" as the Constitution authorized the Legislature to make? "Are such registration laws for particular counties," asked Judge Speer, "differing among themselves in a multitude of material features, in consonance with the Constitution of Georgia and the Constitution and laws of the United States?"

In order to answer this question, the federal judge proceeded to examine the Constitution and laws of the State. The Constitution, which was adopted in 1877, provides that "laws of a general nature shall have uniform operation throughout the State, and no special law shall be enacted in any case for which provision has been made by an existing general law." At that time the existing general law empowered "any qualified voter for members of the General Assembly to vote for any candidate or upon any question which is submitted to all the voters of the State in any county in the State, and for any candidate or question which is submitted to all the voters of any district or circuit, in any county of the circuit or district in which is embraced the county of the voter's residence."

A cursory examination of the various local registration acts passed by the Legislature after 1877 showed not only an utter absence of uniformity, but also the most glaring inequalities. Chattooga County allowed registration until three days before the November election, while Pierce County ended it on the 5th of August, and Appling County by the 1st of July. It often happened that there were two contiguous counties in the same congressional district, in one of which citizens might register up to the day before the election, while, in the other, voters possessing all the qualifications required by the Constitution were denied the right of voting by a registration which closed from six months to a year before the election. This widespread irregularity was intensified in its effect by the fact that in many counties there were no registration laws whatever.

Judge Speer held that the constitutional requirement that laws of a general nature should have uniform operation throughout the State prevented the Legislature from enacting registration laws for one county in a congressional district differing from those for another county in the same district; from enacting such laws to affect a general election, like that for Presidential electors or Representatives in Congress, for particular counties in a congressional district when it failed to enact a uniform law for the whole territory; and from enacting any registration law affecting the qualifications of voters at general elections unless the law was of uniform operation throughout the State. He quoted that "eminent authority," Judge Cooley, as declaring that, while registration laws are constitutional, their requirements must be reasonable and uniform, and equal facilities must be afforded to all the citizens of the State to comply with their requirements, or they are void. "This declaration," he continued, "is especially pertinent where the organic law of the State requires, as we have seen to be the case in Georgia, the enactment of uniform and not special legislation, and where the registration clause of the Constitution provides, not for the registration of a portion of those otherwise qualified to vote, but for the registration of 'all electors.'" Judge Speer therefore reached this conclusion:

> "For the reasons stated, the court is of the opinion that the registration enactments of the General Assembly of Georgia are inoperative and void, because in conflict with the Constitution of the State."

This is a clear and distinct affirmation of the right of the federal courts to inquire into the legislation of a State and to declare laws inoperative and void because they conflict with the Constitution of the State—as was done by Judge Goff in regard to the registration laws of South Carolina. Judge Speer's decision was accepted by the people of Georgia, and the last Legislature enacted a general registration law, uniform in its terms and in its operation on all counties and on all the people. The same thing might be done in South Carolina now if Gov. Evans would convene the Legislature for the purpose, so that delegates to the constitutional convention might be legally elected in August.

JUSTICE HARLAN'S HARANGUE.

Bagehot tells a story of Lord Eldon, when Lord Chancellor, having said, "D—n me, if I had to begin life again, I would begin as an agitator." Some such idea must have been running through Justice Harlan's head ever since he mounted the Supreme Bench. But he would probably have put it, "If I were to live my life over again, I would remain an agitator." It would be an impertinence to inquire into or comment on the antecedents of a judge, apropos of a legal decision. But the political harangue delivered on Monday week by Justice Harlan, in the guise of a judgment on the constitutionality of an act of Congress, has set everyone asking who is this orator in a silk robe who feels so strongly about taxation? Justice Harlan had run once for Congress and twice for the governorship of Kentucky unsuccessfully before 1877. It is but just to him to say that, being a Republican in Kentucky, his defeats reflected no discredit on him, but his nominations showed that he liked office. He was sent to Louisiana as a "visiting statesman" after the election of 1876, and, very soon after the unsavory business of making good the returns of the Louisiana Board, he was appointed a justice of the Supreme Court. We said of the appointment at the time, that "the selection was respectable, but would not have occurred to the President if he had been bent solely on maintaining the character of the court." This meant that the place was in part the reward of political services rendered by a politician.

Remembering that the South has been, during the past few years, almost given over to Populism and cheap money, and that it was to the Southern members mainly that we owed the insertion of the income tax in the tariff-reform bill, it is not surprising that of the four judges who stood by the tax three should be Southerners. Nor is it surprising, remembering Justice Harlan's antecedents, that he should have made himself their mouthpiece in the most violent political tirade ever heard in a court of last resort. The reporters tell strange stories of the violence of his manner, his thumping his desk and "glaring" at the Chief Justice, and his open denunciations of the decision even in the streets. But these things all go with political oratory. They would have been very extraordinary as the accompaniments of a judicial decision; as the accompaniments of a "ringing" attack on rich men they were quite appropriate.

To appreciate how unbecoming the Justice's behavior was, we have to bear in mind that his opinion as to the expediency of an income tax has no more value than that of any other Kentucky politician. Whether the power of levying an unapportioned income tax be "a power which is or may at some time, in an emergency such as that of war, become vital to the existence or preservation of the Union"; whether the denial of such a power to Congress makes it desirable that the American people should promptly "amend their Constitution"; whether the effect of this decision is "to give a position of favoritism to certain kinds of property," or "a position inconsistent with the fundamental principles of our social organization"; whether the annulment of the law "will provoke a contest in this country from which the American people would have been spared" if the Court had upheld it; and whether this contest will be the same as those which "in some countries have swept away in a tempest of passion and frenzy existing social organizations, and put in peril all that was dear to the friends of law and order"—all these are questions for the politician. The opinion of a judge of the Supreme Court about them takes its chance in the public mind with that of Frye on expansion, Don Dickinson on war, Morgan on England, or Bland on currency. There is no reason why Justice Harlan should not hold it and try to spread it, but he is paid, among other things, for *not* promulgating it from the bench in the middle of a legal judgment. Turning the bench into a stump lowers the court in the public eye and lessens its authority. At no time in its existence ought its members more carefully to divest themselves of every character but that of lawyers, to put on an

air of more dispassionateness, and dryness, and abstraction, than when passing on the validity of an act of Congress, for it is only to lawyers pure and simple that any people will ever permit the exercise of a power so stupendous and unprecedented. Should the court get into the way of converting itself, when sitting on questions of constitutionality, into two bands of politicians, and "handle each other without gloves," and take into consideration the whole estate of the nation and the interests of unborn generations, its abolition will not be far off. The one question Justice Harlan had to consider was whether Congress could under the Constitution impose an income tax without apportioning it. Consequently about four-fifths of his address would in a well-conducted debating club have caused the presiding officer to "call him down" for irrelevancy.

His escapade has revived in many quarters the old talk of an amendment to the Constitution making judges of the Supreme Court ineligible for any other office. The need of such a rule has been by some considered imperative ever since the beginning of the anti-slavery struggle. Many such outbreaks as this of Judge Harlan might easily make it necessary to the preservation of the court. For unhappily a considerable portion of the public ascribe such things invariably to what is known as the "Presidential bee." They say that no man sitting in a place of such honor would so grossly violate its proprieties did he not hope thereby to give himself some chance of a dignity for which judicial-mindedness is not a preparation, and the attractions of which hardly any American is able to resist. If experience in such matters had any guiding influence, however, no such amendment would be necessary, for the Presidency has never been attained by the arts of the demagogue. If there be anything in the nature of a rule deducible from the history of the office, it is that the more you desire it, the less likely you are to get it.

"Enter none
Who strive therefor: on the sudden it is won."

THE CHURCH AND PROPERTY.

THE Church Social Union is an organization of prominent clergymen and laymen, founded for the commendable purpose of studying social questions. It meets at stated intervals for public discussion, and also issues cheap semi-monthly publications for popular circulation. Some of the latter have fallen under our eye, and it must be said for them that, in general, they are marked by a spirit of fairness and a desire to get at the facts. The one on the railroad strike of 1894, for example, puts alongside the findings of the investigating commission the statement of Mr. Pullman himself, thus giving both sides of the story.

The Union's issue for May 1 consists of a sermon on "The Church's Duty in Relation to the Sacredness of Property," by the Rev. Prof. Cunningham. It contains a good deal of excellent sense. Prof. Cunningham frankly recognizes the banefulness in the modern industrial world of the old church doctrine of indiscriminate charity, and of the praise of those who give all their goods to feed the poor instead of making their capital productive and able to give employment to the poor, so that they may earn their own food. He says, with as much force as truth: "Those who, as captains of industry, or as great landowners, honestly give their minds to the wise management of their business or their estates, are not necessarily self-seeking because they continue to prosper." He sees clearly, too, the leading rôle which the right of private property has played in the drama of civilization, and deprecates interference with it except for urgent cause shown. But the rule for such interference which he adopts, and which he professes to draw from the New Testament, is one to excite either laughter or alarm, according to the frame of mind of the reader.

"Interference with property," he says, "if it be not arbitrary and capricious, if it is not dictated by the lust of spoliation, but by a desire to do a duty as in the sight of God, can never impugn the sacredness of property, or damage its security, since it means, when it is thus conducted, that there is a public desire to use the material things which God has lent us more worthily, a deliberate desire to carry out His Will upon earth. Christian respect for property rests on a refusal to displace those who are responsible for doing God's Will in a definite sphere. It is entirely consonant with this feeling that there should at times be earnest attempts of public authority to see that that Divine Will is more effectively realized among men."

This rule would certainly be perfectly harmless as long as there was no authorized expounder and representative of the divine will. One man's insight into the divine intentions, at least on the subject of the ownership of property, is as good as another's. If I go to you and tell you that it is God's will that you should give up all of your income above $750, turn your cotton factory into an orphan asylum, and pay your gardener $1,000 a year, you have a perfect right to set up your revelation against mine, and, like the English judge under similar circumstances, "lay a lying knave by the heels."

Where the danger comes in, however, is, not in such clashing of private interpretation, but in the attempt of some organized body, call it Church or State or what you will, to go ahead and in the name of God impose its own ideas of the proper use and distribution of property. That this danger is not wholly imaginary, even at the present time and in this country, may be seen in the experience of the Rev. Prof. Herron on the Pacific coast. No man in this country is more fully persuaded of his right to interfere with property on the divine-will theory. He announces that it is the will of God that the "wage system of economic slavery, the most grinding system of despotism the world has ever seen," should at once be brought to an end, and that "the people should immediately assume control of the sources of production." He gave a course of lectures before a ministerial club in San Francisco, in which such ideas were enunciated again and again and received with applause. It is true that he was conveniently vague. When pressed to state the first step in what he calls "the new redemption," he exclaimed, "God forbid that I should attempt to set up any plan!" But the whole drift of his lectures, as of his books, is the assertion that he is in the confidence of Providence, and that what he says has divine sanction.

How did this proposed interference with property on the divine-will theory strike the Christian laymen of San Francisco? Did they see in it no attack on the security of property simply because it proclaimed its intention, as Prof. Cunningham says, to make the divine will more effective on earth? The answer is to be found in a circular issued by the trustees of the First Congregational Church of San Francisco, protesting against "the socialistic propaganda now actively at work among the Christian pulpits and churches of America," and especially against "the unbridled socialism of Prof. Herron" and those who "hail him as a prophet inspired of God." They affirm that California and San Francisco have suffered quite enough from such teaching when it came only from the "sand-lots," and that "to have such views proclaimed in the name of religion is unendurable." They quote the words of a prominent lawyer, once district attorney, who heard Prof. Herron's lectures, and who writes: "If any number of persons should organize to carry out Prof. Herron's revolutionary teachings, and any forcible act were committed by any person to that end, such act would be an overt act of treason to the United States Government."

The great trouble with all such attempts to find in the New Testament a complete doctrine of property, of the wise and rightful use of wealth, is that no such doctrine is there to be found. If any one pretends to find it, he at once lays himself open to the suspicion implied in the old couplet, referring to the Bible:

"This is the book where each his doctrine seeks,
And this the book where each his doctrine finds."

That the New Testament is defective in its direct teachings about wealth, is no more to its discredit, and no more impairs its true authority, than the fact that it has nothing to say about locomotives or the telephone. The latter were no more beyond its contemplation than were the problems connected with the best use of large accumulations of capital in an industrial world. So far as its teaching on the subject is explicit and detailed, it leans to a view which frank critics like Jowett admit to be inapplicable to a society other than a pastoral and agricultural society. Jowett said one day

to a friend, "It seems to me that there is more in the New Testament in praise of poverty than we like to acknowledge." As for broad rules of conduct for rich and poor alike, as for the duty of sympathy, kindliness, self-sacrifice—that is another question. But it has proved impossible, thus far at least, to draw any detailed rules for all the practical exigencies of the modern world from the general laws of religion or morality—most of all impossible to make men believe that any rules put forward as so derived have a divine authority.

THE ROYAL ACADEMY.

LONDON, May 4, 1895.

IT would be folly indeed if every year one were to seek for novelty in art, as though pictures and statues were as subject to the caprices of fashion as hats and bonnets. But, on the other hand, not a spring passes that one does not look eagerly for some new movement in the Royal Academy, since, in that institution, lack of novelty is too apt to mean lack of art. There is a tendency in England just now to confuse the issues, and to imagine immorality lurking in impressionism, and to discover vice in unaccustomed color and curves. For, to the average Englishman, it is impossible to separate art and morality; and where he cannot find an ethical significance in subject he seeks it in method. Those, however, whose pleasure is in art as art, and nothing else, will be less concerned with such idle fancies than with certain signs—very slight as yet, to be sure—of a new departure at Burlington House.

Already, in the recent winter exhibition, space was reserved for examples of the decorative work of the old craftsmen, as I had occasion to note at the time. Now, additional concession seems to be made to the arts-and-crafts by including, and yet hanging apart from the other pictures, a huge cartoon by Mr. Richmond for the mosaics that are supposed to decorate the choir of St. Paul's; and also a very large oil painting by Mr. A. E. Elmslie—an outdoor arrangement which, in manner and effect, recalls some of M. Chabas's designs for the adornment of municipal walls, and which, no doubt, to Royal Academicians represents the last phase in French mural decoration. Neither is remarkable in itself; it is the prominence given to both that is worth noting, since this may be taken to imply a gradual broadening of the Academy's standard. Their place, appropriately enough, is in the sculpture gallery, where the recognition of late years accorded to the sculptor-goldsmith's art has served as thin end of the decorative wedge. Again, this spring, although Mr. Gilbert contributes nothing, there are caskets and jewels and medals that would be more correctly classed as arts-and-crafts than as sculpture, and among them nothing more delightful than a little casket in steel adorned with a beautiful peacock design in enamel—the work of Mr. and Mrs. Nelson Dawson.

M. Henri Rochefort, studying the *salons* in comparative mood after long years of English exhibitions, has just delivered himself of the opinion that in sculpture France far surpasses England. This may be, but the fact remains that not a few of the greatest English artists of the day are sculptors. From the present Academy Mr. Gilbert, as I have said, is missing, while the collection contains no statue of such importance as the Lord Strathnairne, by Mr. Onslow Ford, which is now in process of erection at Knightsbridge. But still the average of sculpture is far higher than the average of painting, and the bronze heads by Mr. Onslow Ford, the strong, vigorous bust of Gen. Lord Roberts by Mr. Harry Bates, the bas-reliefs by Mr. Frampton, and, above all, the little "Orpheus" by Mr. Swan, would be distinguished and notable in any collection. This "Orpheus" is a statuette in silver, the gracefully posed figure, holding aloft a golden lyre, and standing on a rock about which panthers—and Barye himself could not have modelled them with greater vigor—creep and crouch in lovely sinuous, symmetrical curves and lines. Even to M. Rochefort it might prove difficult to find in a French gallery a statuette more perfect and complete, in design as in actual modelling; and one cannot but regret that Mr. Swan devotes such a large portion of his time to painting. His pictures this year, one of tigers at dawn, the other of a goatherd, are far less satisfactory.

To consider the painting is to be confronted with the necessity of saying again what one has been saying for many years past. It is impossible here to ignore the Academicians, since they are aggressively hung on the line, while many a good painter is banished to the very topmost ranks. And yet, with a few exceptions, especially among the younger Associates, they show little that deserves the distinction. Why repeat that Sir Frederick Leighton's drawing is learned and scholarly—these, I believe, are the correct terms—when the orange of his "Flaming June," a sleeping woman tied up in an impossible knot, positively offends, and none of his other canvases present the stateliness of composition that hitherto has often atoned for artificial convention? Why repeat that Mr. Tadema's marbles are marvellous and his draperies classical, when, in his "Spring," the procession between marble walls has suggested neither beautiful line nor harmonious color? One asks why Mr. Hook in his marines and Mr. Davis in his landscapes, despite careful observation of nature and rendering as truthful, should produce such prosaic results. And one stops appalled before the crude, clever piece of scene-painting which Prof. Herkomer thinks is a picture, wondering how he came to believe that the meeting of the Bürgermeister at Landsberg and his Town Council, in a room of astounding ugliness, should be worth the trouble of recording on canvas with realistic dulness and on a colossal scale. There is no escaping it, since it faces the visitor upon entering and gives quite a new perspective to the galleries, as they open one out of the other.

Fortunately, several of the other Academicians are more readily overlooked, and it is a relief to turn to Mr. Orchardson, though he sends but one small painting. He calls this "A Flower"—an arrangement in rose and silver, would have answered as well; for it is a simple study in color, full of fine drawing and modelling in the chrysanthemums, which make a background to a woman in a pale-pink gown who leans over a rose, and the single figure in the composition. Mr. Clausen's work seldom fails to be interesting, and his "Harvest" arrests attention, even if it be chiefly to note that his treatment of summer afternoon light does not improve with repetition. His "Mowers" of a year or two ago, a picture with very much the same subject, is to be counted one of his finest achievements; but in "Harvest" a theatrical element enters into the statuesque grouping of the two men in the foreground; and, though the face of the one who stands is enveloped in atmosphere, the head is stuck flat against the sky, which is really but a surface of paint without a suggestion of air or light. Here is a failure, however, that is to be studied, for there is no mistaking its genuine artistic intention; and, for a success, Mr. Clausen shows a less ambitious "Farmer's Boy," in which quiet grays and dull browns in dim, solemn light have been made to present a beautiful harmony.

But, when all is said, it is Mr. Sargent who triumphs at the Academy as at the New Gallery. His portrait of Mr. Coventry Patmore is as fine a rendering of an old man as one could wish to see. It is a half-length, and the arrangement is simple to a fault; but the head is a masterpiece. Not an indication of old age is spared; the drawing of the wrinkled forehead and lined cheeks is quite merciless, the somewhat long hair and the moustache are silvery white; and yet Mr. Sargent has managed to express, in the firm mouth and the keen eye, an old age that is still full of vigor and energy. Nor do I remember one of his portraits in which the modelling is more accomplished, the brush-work more scholarly. He has also a small study, as striking, of the same head. Of his three other portraits, the most noteworthy is the "W. Graham Robertson, Esq." A Japanese screen, a poodle, a young man, of evident dandified propensities, in long black overcoat almost to his heels, leaning on a jade-handled cane, come together in a composi ion of dignified straightforwardness, and give Mr. Sargent the chance to carry out a fine color-scheme in black and gray. But somehow, perhaps because the character of the lackadaisical dandy is so well suggested, perhaps because of the serene severity of the color, comparison with Mr. Whistler's "Comte Montesquiou" is invited, and a lack of refinement and subtlety in Mr. Sargent's canvas at once becomes obvious. His remaining two contributions are presentments of women, and not so important, though the "Mrs. Russell Cooke," Dutch in the character of the face and the fashion of the gown, tremendously skilful in the rendering of the jewels, and the "Mrs. Ernest Hills," with the superb painting of white lace over black satin, find nothing to compete with them throughout the galleries.

It is an old complaint that the Academy does little to encourage outsiders, but this year the reason for it is more apparent than ever. There can be no special inducement for the Glasgow men to contribute when Mr. Paterson's fine landscape is skied, though the line abounds with MacWhirters and the like; when Mr. Lavery, who has returned to his old form and has never been more distinguished, sees his best portrait share the same fate, though Mr. Fildes and Mr. Wells are brought to the fore. It is easy to understand why the majority of the younger and more able Englishmen refrain from sending altogether, when Mr. Greiffenhagen has been treated with scarce greater consideration. Here and there, in a good place, a landscape by Mr. Parsons, or Mr. North, or Mr. Mark Fisher, a portrait by M. Carolus Duran or Mr. Tuke breaks the monotony. But it is no exaggeration to state that most of the better things are either sent aloft or neatly stowed away in dark corners. The consequence is that one hopes the younger generation will continue to hold aloof, unless, like Mr. Sargent, they can force the Academy to accept them. To stoop to Academical standards would lead, most likely, to absorption in the Academical rank and file, as has happened with the Newlyn school, to whom, not so long since, every one looked for the great

future of art in England. Now, already, the Newlynites are practically forgotten.

It is a mere matter of form to stray into the water-color and the black-and-white rooms. Neither is apt to contain work of merit or interest. Rumors are abroad of the rejection of illustrators who stand first in their art, but who probably have never been heard of by Academicians, still ignorant of the modern development and popularity of illustration. To mention two or three etchings by Mr. Charles J. Watson and Mr. Oliver Hall is to exhaust the list of notable contributions. The water-colors offer even less chance to be amiable. To persevere in opening these two rooms to such commonplace performances savors of farce. N. N.

BARANTE'S MEMOIRS.—II.

PARIS, May 10, 1895.

I LEFT Barante in Russia, at the beginning of his difficult mission. His correspondence throws a great light on the relations which France, entering after a revolution on the path of constitutional and parliamentary government, had to maintain with the most autocratic power in the world. The Emperor Nicholas was autocrat *par excellence*, but he was not lacking in a certain shrewdness and flexibility which belong to the Slavic races. His state of mind is well described in this despatch to the Duke de Broglie (February 9, 1836):

"The Emperor, like all the princes of Europe, was struck by the Revolution of July as if it were the greatest insult which had ever been received by the royal races. He experienced this feeling with the vivacity which I have noticed in King Charles Albert. Powerful and far removed as he is, he expressed his feeling without reserve. However, with him as with the others, it would soon have begun to grow weaker had not the insurrection in Poland taken place; he then received from the hands of France a profound wound, which was reopened year after year. . . . Thus disposed, the Emperor began to judge France with passion, to mistake her situation, to entertain illusions about our future; he would listen to no information contrary to his desire, his hope; his ambassadors displeased him when they tried to disabuse him."

Barante remarks, however, that the state of public opinion in Russia is not favorable to the French Legitimists.

"It is curious to observe to what a degree Russia remained estranged from the French Restoration. The shops and the drawing-rooms are full of portraits of Napoleon, of engravings of his battles, of all that concerns him. The worship of his genius finds even more adulation here than in France; from the Emperor to the humblest officer, nobody speaks of him without admiration. I have not yet seen a single lithograph of Louis XVIII. or of Charles X., and nobody has pronounced their names to me. When I expressed some surprise at this, I was told that the relations of France and Russia were particularly intimate at the time of the Empire, that the Russians were then received and caressed in Paris; that the court of Napoleon was military, on horseback, *en camaraderie*, while under the Restoration Louis XVIII. began to behave in a very extraordinary fashion towards the Emperor Alexander, to whom he expressed no gratitude; that the Russians ceased to be well received, and could form no acquaintance with old courtiers, and with gentlemen of the household belonging to another epoch and having other manners. In short, the ill will of the Government and of the Society of Saint Petersburg sprang from this, and if the Emperor reopened friendly communications between France and Russia, the Russian aristocracy would in all likelihood be the least adverse to us of all European aristocracies."

Barante was not long, also, in perceiving that the chief reason of the Emperor's enmity to Louis-Philippe was the growing attraction which constitutional France felt for constitutional England. The London conference, Talleyrand's mission to London, rendered this attraction very visible.

Barante was well informed of what was going on in France by his usual correspondents. Sometimes extraordinary remarks are mixed up with the endless speculations on ministerial changes. After Fieschi made his horrible attempt on the life of Louis-Philippe, and succeeded only in killing or wounding a number of people on the Boulevard St.-Martin, Count Molé writes, February 12, 1836:

"I was greatly interested in the late trial. Fieschi was not an ordinary man. All the country between the Alps and the two seas would not produce his like. One of the witnesses compared him to one of Cooper's savages. I saw in him the mountaineer of Corsica, a unique type which joins to meridional duplicity the most intrepid energy. I will only say to you that I found in Fieschi something of Pozzo, even more of Napoleon—not of the Napoleon of M. Thiers and of all those who have painted him as they imagined him, but of the Napoleon who was sometimes revealed to me by words which escaped from his lips, or by involuntary movements of his expressive face."

Thiers formed a new cabinet in the beginning of 1836, and he wrote to Barante: "As for our external policy, I have read all your despatches, and I cannot sufficiently tell you how sensible I find them—I would add witty, if we were at the Academy. . . . I shall remain faithful to the English alliance, since Europe has now made it our best alliance; but I shall avoid unreasonable declarations which would in the end bring about dangerous conflicts." The Emperor Nicholas continued to affect much regard for Barante, speaking as little as possible of Louis-Philippe. "I could see," wrote Comte Bresson to Barante, "that the King was much pleased with your despatches, but wounded by this affectation on the part of the Emperor of leaving him aside. He said to me, 'The reception was excellent for the Ambassador, but *blessante* for the King.'" Nicholas's great fear was to see an active alliance against himself between France and England; the incident of the Polish question, which was then a very burning question, constantly renewed this fear. Everybody in Europe desired the *status quo*, but on one side there were the three courts of the north, St. Petersburg, Berlin, and Vienna, more or less united by their fear of revolutionary ideas and by the memories of the partition of Poland; on the other were France and England.

Barante did not much believe in the offensive strength of Russia. He complains in his letters of the difficulty of getting any precise information; still, "I think," says he, "it may be considered certain that the Russian Government could only with difficulty take the field, outside of its territory, with a first army of 150,000 men, and with more difficulty with an army of 100,000 men in the second year. . . . Her finances especially set a limit to her power. Recruiting is neither rapid nor easy; it is helped by no system of reserves, and the great distances which the levies have to traverse are another obstacle to the keeping of an army." This was written in 1836, and the situation has since been much modified. However, Russia still showed in the last Turkish war that she is not yet organized for rapid military operations.

Thiers, writing to Barante, makes these sensible remarks:

"You speak to me of alliances. I do not cherish on this subject the projects which people suppose that I do. I am a partisan of the English alliance, but without exclusiveness. We must not place ourselves in two camps, one composed of the three courts of the north, the other of the two maritime powers, nor prepare ourselves by hostilities of language or of attitude for more real hostilities. . . . There is nothing to do now in Europe but to wait, and meanwhile to better our domestic situation, to become rich and strong. *Il faut faire du Cardinal de Fleury.* We shall see by and by."

Poland was the subject on which Nicholas showed more nervousness than on any other. Barante, speaking of Marshal Paskevitch, says: "The very words Warsaw and Poland, pronounced in the most indifferent manner, on subjects of trade or statistics, made him ill at ease. Paskevitch is probably a distinguished general, but he is no more allowed to be a politician than any other person in Russia. His conduct and even his thought are of passive obedience." Such extracts show well what a pneumatic machine an autocratic government is.

Barante did not always write on politics. Here, for instance, is an extract from a letter to Madam Anisson du Perron (who died only a few years ago, and was the true type of the intellectual ladies of past times):

"If the word Sybarite could be used in the 60th degree of latitude, it would well suit the life at Petersburg, exclusively arranged as it is for quiet and well-being. The summer is beautiful, but only to behold, as the cold and the wind abate but little. The length of the days charms me. I never tire of the sight of the Neva, so noble and grand. The islands are another beauty of Petersburg. Imagine, on the other side of the river, gardens divided by thousands of canals, small rivulets, rivers, and lakes, all ending in great forests which extend towards the sea. Every one has there a country house, well kept, surrounded by flowers; there are no walls, all the walks are in common—an immense public garden."

The Duke of Orleans was travelling in Germany in search of a wife; he was personally very attractive, and was extremely well received in Vienna and in Berlin, but many difficulties were thrown in the way of his matrimonial projects. Thiers wrote to Barante (June 30, 1836): "There is a unanimous cry here for pressing the marriage *quelconque* of the Duke of Orleans. I confess that I share this sentiment, and if we do not succeed with a great house, we must go at once to a house which will not refuse. . . . Any princess, pure, healthy, likely to be a good mother, will be sufficient. It is a stupidity to imagine that a woman sitting on the throne of France can appear of great or low origin. She will be so high that nobody will see in her anything but the royalty of France." The choice of the Duke of Orleans fell on Princess Helen of Mecklenburg. Barante could never ascertain exactly what part the Emperor of Russia took in this affair of the marriage of the French Crown Prince. The influence which he certainly exercised against the Duke of Orleans never took an official or diplomatic form; the advice he gave was given in his family correspondence. He probably spoke against the union with the French prince through his own wife or Prince Charles of Prussia. One thing is certain, and that is, that he showed much passion in the matter, and, when the marriage was concluded, great irritation. Any opposition put him almost beside himself. The marriage of the Duke of Orleans with a German princess made him feel that he had not as much influence as he thought over Prussia and Germany.

How difficult Barante's task must have been under such circumstances, can easily be imagined. He was, fortunately, a man of *esprit*, with a happy disposition, a politeness and a

sort of grace which preserved him from the violent temper of the Emperor. With Nesselrode he was perfectly at ease, and they conversed freely on all matters which affected Europe at the time. Occasionally Nicholas showed singular effusiveness. Whenever the life of Louis-Philippe was attempted (and, alas! it was attempted seventeen times during a reign of eighteen years), he thought it his duty to express his great horror and his sympathy. He was generally very attentive to the French whom he happened to see and who had been in the French army. He once took M. de Guinemont, a mere attaché at Copenhagen, formerly an officer in the French army, to a review: "The day was fine, the sun shone upon this imposing spectacle. The Emperor was enchanted. . . . Forgetting his usual gravity, he sang a soldier's song. Approaching M. de Guinemont, 'Well, comrade,' he exclaimed, 'what do you think of this? I hope these guns will never fire against French guns. God preserve us from war! But if, unfortunately, we had one, it would be fine to see the Russians and the French march together. Nothing would hold out against our two armies.'" The character of Nicholas—impulsive, passionate, autocratic—is very well depicted in these interesting memoirs of Barante. While reading these despatches I thought of the Crimean war, of the fall of Sebastopol, of the dramatic end of Nicholas! I thought, also, of all the late outpourings of the French and Russian so-called alliance.

Baron Brunnow, who was a long time Russian Ambassador in London, held a subordinate post at the Foreign Office in St. Petersburg during Barante's embassy. I once heard him say in London, not long before the war between France and Germany in 1870, that the misunderstanding between the Emperor Nicholas and King Louis-Philippe had been a very great misfortune, and that during the last part of his life Nicholas sometimes referred to it, and expressed regret at having helped to render the King's task more difficult.

Correspondence.

THE LEGISLATIVE TORMENT.

To the Editor of The Nation:

Sir: Your article with the above heading is enough to appall the stoutest advocate of popular government. It is, however, not a bit too strong, and, more than that, it is applicable in a greater or less degree to every one of forty-four State legislatures and to Congress into the bargain. The gloomiest feature of that article is that it closes without a hint or suggestion of definite remedy.

And yet one ray of light illumines the subject—a light cast by the whole course of modern history, and which shows that almost the whole difficulty arises from one simple and definite cause—government by a legislature. Modern history has established with perfect clearness two propositions, (1) that a legislature is just as greedy and grasping of power as any despot; and (2) that while a despot may govern well, it is wholly impossible for a legislature which has taken the whole power of government to govern at all. It is just because we are trying to perform this impossibility that we are coming to grief.

The first failure was made in England by the Long Parliament, and Cromwell had to come and turn it out. The struggle was continued under the later Stuarts; and, after the Revolution, began the process of formation of a new system of executive power, at once strong and responsible, which makes the political history of Great Britain perhaps more precious for the world than that of any nation which ever existed.

The National Assembly in France tried precisely the same experiment as the Long Parliament, and through its successors met the same fate at the hands of Napoleon. For a century France has alternated between military despots and legislatures incompetent to govern; and if the last twenty-five years have shown as great relative progress as that of any nation, it needs no prophet to foretell that unless some constitutional means can be found for strengthening the executive power and checking that of the Legislature, the reins of government will be seized by the first military adventurer who is competent for the work.

In this country we have lost the very conception of executive power, and turn to the Legislature for everything, with results already apparent. A nation which limits its idea of executive function to a veto may be said to be well advanced on the road to destruction. To suggest that the initiative and guidance of legislation is the proper function of the Executive, and that the veto belongs to the Legislature, is enough to raise a cry at once of horror and contempt. Yet that is the result to be worked out, if the country is not, after infinite suffering, to seek relief at the hands of a Cromwell or a Napoleon.

What is the prospect of doing this? The great obstacle is that our people are accustomed to look to the Legislature for reforms, whereas the Legislature is the thing to be reformed. The work is to be done by the Executive, not a Cromwell or a Napoleon suppressing the Legislature by force of arms, but a Lincoln making a determined stand against the Legislature, upon legal and constitutional grounds, for the rights of his office and the welfare of the people. The proposal to give seats to the Cabinet officers in Congress is merely to give the Executive an equal fighting ground with the members of that body. But the real battle will have to be fought out in the States. I believe that in Massachusetts the situation and the public mind are ripe and only waiting for the man. The first step was taken some ten years ago by Benjamin F. Butler (*absit omen!*), who protested against the impotence of the Governor, and the government of the State by commissions. He won the field, though his offensive methods soon lost it for him again. The Hon. William E. Russell, in three annual messages, took the same ground as to the impotence of the Governor, the government by commissions, and the influence of the lobby, and was three times elected—as I believe, on that issue. But the Legislature sneered at him, and, after the usual fashion, he submitted without appealing to the people.

But the lesson cannot and will not be lost. Sooner or later the man must come who will not be browbeaten, but will put the case as between his office and the Legislature calmly but clearly before the people. And the man who can do that successfully will find but two names ahead of him in the roll of honor of the nation.

G. B.

Boston, May 25, 1895.

THE DECAY OF THE SENATE.

To the Editor of The Nation:

Sir: The town of Canton celebrated yesterday the one-hundredth anniversary of the birth of its foremost citizen, Silas Wright. Similar celebrations were held in Brooklyn and elsewhere. This event suggests a comparison between the United States Senate of Wright's time and that of the present; and, in connection with the candidacy of Addicks, George Gould, and others, calls to mind the following extract from Plutarch's Life of Pompey:

"Two persons received from the people the name of Maximus, or the Greatest: Valerius, for reconciling the Senate and the people, and Fabius Rullus, because he put out of the Senate certain sons of freed slaves *who had been admitted into it because of their wealth.*"

O tempora, O mores!

N. L. Robinson.

Canton, N. Y., May 25, 1895.

A MONUMENT TO SERGEANT FLOYD.

To the Editor of The Nation:

Sir: Those who are interested in Lewis and Clark matters will be glad to hear of steps which have been taken to perpetuate the memory of Sergt. Charles Floyd, who died on the expedition near Sioux City, Ia., August 20, 1804, and was buried on an eminence in that vicinity still known as Sergeant's Bluff. The grave has been washed into the river, but the cedar post which was erected over it is extant, having been removed a few yards from the original location. It is proposed by Mitchell Vincent and others to meet on the bluff on the ninety-first anniversary of Floyd's death and organize an association having for its object the erection of a monument on the spot, in the midst of a public park of some twenty or thirty acres, to be purchased by Sioux City and maintained by suitable legislation. It now seems probable that this project will be carried into effect within two years. Very truly yours,

Elliott Coues.

[Another correspondent writes as follows.—Ed. Nation.]

"Floyd was the first United States soldier who died on the Louisiana Purchase. Born in Kentucky, he enlisted under Lewis and Clark, was appointed one of their three sergeants, in the adventurous expedition up the Missouri and overland to the Pacific—a journey never before undertaken by white men. On the 20th of August, 1804, the hundredth day after leaving St. Louis, he died, and was buried about two miles below the site of Sioux City. His captains wrote: 'We buried him on the top of the bluff half a mile below a small river, to which we gave his name. He was buried with the honors of war and much lamented. A cedar post with the name, "Sergt. C. Floyd died here 20th of August, 1804," was fixed at the head of his grave.' Breckenridge, voyaging there seven years later, describes the post as a cross seen by navigators at a considerable distance. Catlin, who in 1832 had reached the Yellowstone in the first steamer that ever ascended the Missouri so far, ventured with two half-breed oarsmen in a canoe down the great river the same season, sketching all the way. Floyd's grave struck him as 'one of the most lovely and imposing bluffs.' He landed in front of it, encamped a couple of days at its base, several times sat on the grave amid the most delicate wildflowers by the cedar post and sign, etc., etc. From sketches then taken he painted a landscape, No. 376 in his gallery, exhibited in London and Paris, and now at Washington in the National Museum. In 1839 Nicollet, sent West by the Secretary of War, visited the spot. The post set up thirty-five years before had fallen. A cyclone was impending, but Nicollet would not let the steamer leave till his men had replaced the memorial.

"In 1894 a Journal by Floyd, which it was not before known that he had written, and continued till the last day but one of his life, came to light among the manuscripts of the Wisconsin Historical Society. It was the theme of an address before the American Antiquarian Society at their Boston meeting, and was published by them *verbatim, literatim, et*

punctuatim. This find crystallized the floating purposes of Iowa pioneers into a resolution. On the ninety-first anniversary of Floyd's burial their society will have a formal organization at his grave. Sioux City, as they believe, will lay out a park with that hallowed spot as a nucleus, and there stone or everduring brass will fitly commemorate the first man who laid down his life in scattering the darkness which had brooded over the trans-Mississippi *terra incognita*, the first light shining into a darkness that might be felt."

TAXATION OF FOREIGN STUDENTS IN GERMANY.

To the Editor of The Nation:

Sir: To my personal knowledge three Americans and one Englishman left Berlin and came to Munich to pursue their studies in the University because they were made to pay income taxes in the former city. The fact is, all foreign residents are subject to taxation in North Germany, and no foreign resident is subject to taxation in Bavaria. It is quite possible that this regulation has been recently relaxed in its application to matriculated students in North German universities, simply because it tended to drive them away. Only a few days ago an American lady informed me that several of her friends are staying in Hanover in order to study German, and that they all have to pay income taxes. These young ladies are not matriculated students of any educational institution, but they are in Hanover solely for the purpose of learning German, being under the impression that the language is spoken correctly only in that country; whereas the Hanoverian pronunciation is regarded by the Germans as provincial and is not heard on the stage even in Hanover. It is to be hoped that the discussion of the taxation of students in North Germany will lead to its complete abolition; if so, many thanks will be due to the *Nation*. P.

Munich, May 3, 1895.

To the Editor of The Nation:

Sir: In 1888, there was in Berlin a party of five, consisting of a student of architecture, with his mother who was studying painting, and a student of medicine, with his wife and mother. It is needless to say that the authorities informed themselves regarding the personal history, temporary employment, aims, and ambitions of each of the five, but it may surprise some who are deterred from studying in Germany on account of the onerous taxes upon foreign students that of this party only the mother of the medical student was regarded as sojourning in the city for pleasure solely, and as being therefore a fit subject for taxation. I cannot recall the amount imposed, but it was trifling.—Yours respectfully,

R. Mowry Bell.

Santa Cruz, Cal., May 2, 1895.

[We cannot print anything more on this subject, concerning which there is much conflicting testimony.—Ed. Nation.]

THE NOMINAL RATING OF COLLEGES.

To the Editor of The Nation:

Sir: The absence of any test by which the standard of American colleges may be publicly tried is undoubtedly the cause of many of the discrepancies between the claims of their supporters and what proves too often, when closer relations are entered upon, to be the truth regarding their relative standing.

A few years ago the *Nation* called attention to the danger which the women's colleges especially were incurring from a loose system of admission by certificate. That warning seems to have been justified by the recent experiences at Radcliffe of several graduates of one of the colleges then under discussion. These women applied for admission to the graduate department of Radcliffe. Their application was refused, but, following the custom of Harvard in regard to the weaker and less adequately equipped colleges for men, admission to the senior class of Radcliffe was offered and accepted. In this way they lost one year in the pursuit of a higher degree. I am told that all acknowledge the justice of this decision, and admit that the work of their Freshman year was not up to the standard it should have reached, because so large a number are admitted insufficiently prepared, although the entrance requirements are nominally the same as those of colleges for men whose alumni are admitted directly to Harvard's Graduate School. A. B.

May 21, 1895.

Notes.

The Selden Society hopes to have ready in July a new edition of 'The Mirrour of the Justices,' the curious old law-book of which Lord Coke said: "In this . . . in effect appeareth the whole frame of the ancient common laws." The earlier editions are corrupt and often unintelligible; this one is being printed from the excellent MSS. in the possession of Corpus Christi College, Cambridge. The Society is also preparing for early publication a volume to be called 'Bracton and Azo,' to be edited by Prof. F. W. Maitland. Thanks to Prof. Maitland's admirable work in editing Bracton's Note-Book, the English sources of Bracton's treatise are before the student. Now it is proposed, by printing certain parts of Bracton's text and Azo's 'Summa' in parallel columns, to make plain how much Bracton and the English law through him do and do not owe to the Roman law. Azo's 'Summa' was at one time (as the proverb *Chi non ha Azzo non vada a Palazzo* still attests) a necessary possession of every Italian judge, and from it Bracton is supposed to have drawn most of his knowledge of the civil law. "Twice in the history of England," Prof. Maitland has well said, "has an Englishman had the motive, the courage, the power to write a great, readable, reasonable book about English law as a whole." Bracton and Blackstone are these two authors, and everything which helps to the understanding of the former and to the knowledge of the sources which he used, is to be welcomed by all who care for the history of our law and institutions.

The Jewish Publication Society, Philadelphia, have nearly ready 'The Talmud,' consisting of Emanuel Deutsch's famous essay, with notes of two lectures by him on the same theme.

'Advance Japan: A Nation thoroughly in Earnest,' by J. Morris, with illustrations by R. Isayama, and 'The Great Astronomers,' by Robert Ball, are in preparation by J. B. Lippincott Co.

A volume on 'Labor Legislation in the United States,' by W. B. Shaw, is to be issued by T. Y. Crowell & Co., as is also 'The Old Man Savarin,' short stories by Edward W. Thompson.

Ginn & Co. announce 'Lakes of North America,' by Israel C. Russell, Professor of Geology in the University of Michigan.

Fleming H. Revell Co. will bring out during the summer a 'Memoir of John L. Nevius, D.D.,' for forty years a leading missionary of the American Presbyterian Board in the Province of Shantung, China.

Prof. Cheyne's 'Introduction to the Book of Isaiah'; 'Selected Essays of John Stuart Mill,' with an introduction by Frederic Harrison; 'Three Months in the Forests of France,' by Miss Margaret Stokes; and 'Studies of Men,' by George W. Smalley, are in the press of Macmillan & Co.

M. Gaston Deschamps, the erudite literary critic of the *Temps*, is about to publish a volume to be entitled 'La Vie et les Livres,' a collection of studies on contemporary writers and of dissertations on events and things. The *Figaro*, which makes this announcement, calls his criticism *fine et un peu timide*, which is, perhaps, not a wholly unfair appreciation of it. In length and breadth his book will extend from Renan to M. Huysmans, and from Taine to M. Marcel Prévost, including Pierre Loti, Leconte de Lisle, Anatole France, and others.

The next book of M. Huysmans will be devoted to mystical art, the study of Gothic cathedrals, pictures of the "primitive" painters, and so on. Two years of labor will go to the making of the book.

The third volume of the 'Discours et Opinions de Jules Ferry' is just now coming out with commentaries and notes by M. Paul Robiquet (Paris: Armand Colin et Cie.). The first two volumes included the public life of M. Ferry from its beginnings under the Second Empire down to the Sixteenth of May. The present volume, of some 600 octavo pages, covers the epoch of the School Laws, and contains all of Ferry's speeches on the famous Article Seven; to these being added a number of articles, hitherto anonymous, written by him during this stirring period. Five volumes will be required for the entire work. Mme. Ferry and M. Charles Ferry collaborate with M. Robiquet in its production.

Prof. Chantepie de la Saussaye of Amsterdam has just announced his purpose to publish in 1896-7 a revised edition of his 'Religionsgeschichte,' the current edition of 1887 having already become obsolescent, though it was and remains by common consent the standard work on its subject. The trustworthiness of the coming edition will be increased by the coöperation with Prof. Saussaye of a number of experts on the religions concerned. The introductory portions, entitled "Allgemeiner Theil" and "Phänomenologischer Theil," will, however, be reserved by Prof. Saussaye for separate and subsequent treatment by himself.

One-half, or 600 pages, of the third edition of the Snow-Church Co.'s 'Legal and Banking Year-book' for 1895 is occupied with a compendium of the commercial and statutory law of the several States and of Canada, with maps of each; a third as much space is given to a list of attorneys and banks in the same territory and in foreign countries; and about 125 pages to lists of points accessible to banking towns in the United States and in Canada. Courts and court calendars, forms of depositions, patent-law and trade-mark statutes; U. S. diplomatic service, consuls and consulates; cipher codes, population statistics—are some of the other features of this valuable annual.

The reprint of Field - Marshal Wolseley's *Pall Mall Magazine* articles on 'The Decline and Fall of Napoleon,' with which we have already dealt, is issued in this country by Roberts Bros., with portraits and maps. It

forms one of a military series issuing from the office of the *Magazine*.

Dodd, Mead & Co. have published an apparently painstaking and faithful translation, by Miss Arabella Ward, of a volume which we noticed a couple of years ago under the title of 'La Femme aux États-Unis,' by C. de Varigny. The sagacity which we failed to discover in the original does not become more evident through the new medium. It would hardly be possible, indeed, for a traveller in a foreign land to ornament his narrative with a more meagre proportion of discriminating or carefully collated facts than is to be found in this volume.

As a treatise, Mr. Edward F. Strange's 'Alphabets: A Handbook of Lettering, with Historical, Critical, and Practical Descriptions' (London: George Bell & Sons; New York: Macmillan), is disappointing. It attempts too much, and the historical portion shows an incapacity for clear, condensed statement; the criticism fails to reveal a sure sense of the beautiful. More and more "the practical descriptions" dominate, and the chief worth of this number of the "Ex-Libris Series" consists in its very abundant examples, mostly in facsimile, drawn from ancient MSS., from the fonts of early printers and the more and most modern typefounders—Caslon, Baskerville, Wilson, William Morris—from copy-books of several nationalities, from pottery, stone monuments, and metal-work. From these, selection must be made according to the taste of him who resorts to this book; he will get very little aid from the author. The typography is attractive, but there are some carelessnesses, *e. g.*, "Francesca da Bologna" (p. 76); "Francesco de Bologna (see above)" (p. 79); and on p. 54 the strange statement is made that *Incunabuli* (*sic*) is the generic name of block-books.

As the child—doubtless "daughter Irene"—whose picture follows the dedication of Mr. Clarence Moores Weed's 'Ten New England Blossoms and their Insect Visitors' (Houghton, Mifflin & Co.) seems not more than three or four years old, she will have to wait a little before enjoying her father's gift. In the meantime, children of ten or twelve can fully appreciate it and share with their elders a keen interest in some of nature's neatest arrangements.

For grown people whose childhood was not enriched by such studies, comes a pocket guide to British wild flowers, by Edward Step, called 'Wayside and Woodland Blossoms' (Frederick Warne & Co.). It is proudly furnished with 156 colored plates which add something to the book's value for those who wish to identify species, but little to its beauty. The descriptions are clear and not repellently technical. Besides the distinctively British plants, we recognize many of those cosmopolites which are everywhere at home, and as familiar to us as to our cousins over the water.

Though without the dubious advantage of color, Mr. F. Schuyler Mathews's careful description and graceful drawings of our 'Familiar Flowers of Field and Garden' (Appletons) are fitted to make them familiar even to those who have not before made their acquaintance. The author apparently takes special pride in his accurate use of color names, and is probably not unjustified in his regret that Gray "was at least partially color-blind." The flowers are arranged in the general order of blossoming, thus forming a floral calendar.

Boussod, Valadon & Co., 303 Fifth Avenue, send us the first part of Charles Yriarte's annual '*Figaro* Salon,' for 1895, with the usual large-scale half-tone copies of the works exhibited, and one separate colored plate (Chartier's "Murat at Jena"). Noticeable in this instalment is the number of paintings by women.

The *American Architectural Record* for May launches a series of issues to be wholly given up each to the work of a single architectural firm. Beginning is made with McKim, Mead & White, whose buildings are photographically pictured in great number, with letterpress by Mr. Russell Sturgis, who, after a brief biographical sketch of the members of the firm, describes and criticises their more conspicuous buildings and other constructions. The critical side of this undertaking will be much appreciated by the public as well as by the fraternity.

A portrait of the late President C. Welling and a sympathetic account of his life and writings will be found in the April number of the Princeton College *Bulletin*.

With the fifth quarterly part of *Bibliographica* (Scribners) Mr. Alfred W. Pollard begins his second volume and preserves the high standard set in the first. Perhaps there is an undue proportion of papers which are more interesting in England than anywhere else. There are but two outside the Anglican communion; and, as it happens, these are perhaps the most important papers in the present number. One is Mr. G. R. Redgrave's account of the little-known minor works of Sebastian Brandt, whose 'Ship of Fools' has cast his other books into undeserved shadow. The other is Mr. Paul Kristeller's careful analysis of the methods of the Florentine Book illustrators in the fifteenth century. Of the English articles Mr. Pollard's own, on "English Book-Sales, 1681–86," is the most curious. He remarks that, by the expenditure of twenty-five pounds at the auction sales he is considering, some two hundred volumes could have been acquired that would be cheap now at ten thousand pounds. The apparent profit seems alluring—but it is less than would have resulted from compound interest.

Theatre-going Americans who visit London this season will have an opportunity to compare the methods and taste of French and English theatrical managers of the "independent" school. The "Théâtre de l'Oeuvre" proposes to give six performances (including three different programmes) in June, at Mr. J. T. Grein's Independent Theatre. The provisional programme includes plays by Björnson, Maeterlinck, and Ibsen, and a new and original French play by François de Curel.

Tourists, on the other hand, who contemplate a summer in Switzerland may care to know that the inhabitants of Selzach, a small commune in the Canton of Soleure, have arranged to repeat their local Passion Play this year. The performances will take place on successive Sundays from June 23 until August 25, as well as on the festival of the Assumption, August 15. A substantial roofed hall has been erected for the play, which will begin at eleven A. M. and last until five P. M., with a "Mittags-Pause" for rest and refreshment. The price of seats (1,200 in number) varies from two to eight francs each.

Americans, finally, who happen to be in Germany during the autumn will have a unique opportunity of seeing and hearing most of the distinguished economists in the empire. The Verein für Socialpolitik has arranged a "Ferienkurs" to last from September 30 to October 12, in the University buildings at Berlin, with absurdly small charges for admission. During this period some eleven scholars, several of them of more than German reputation, will deliver each a course of six lectures. Among these may be mentioned Schmoller on social organization, Brentano on the wage-contract, Philippovich on the recent trade policy of Central Europe, Neumann on recent questions of German finance, and Knapp on currency. The official announcement tells us that the lectures are intended primarily for lawyers, officials, clergymen, teachers, and journalists, but that "wider circles, including women of cultivation, are also welcome." The reference to "gebildete Frauen" is a sign of the times.

A School of Pedagogy has been added to the other departments of the University of Buffalo, its faculty of four being equally divided as to sex. The course of study will cover a period of two years, and the school will open on September 25. Information in regard to it may be obtained of the registrar, Mr. Herbert G. Lord, No. 55 Cottage Street, Buffalo. President De Garmo of Swarthmore College, Prof. Nicholas Murray Butler of Columbia, and Dr. W. T. Harris, United States Commissioner of Education, will be among the lecturers.

—The *Portfolio* for May (Macmillan) is a timely monograph on Japanese wood-engraving, by William Anderson, a collector and connoisseur in whose hands one feels entirely safe, and who is besides an agreeable writer. The history of this art in the three neighboring countries of China, Corea, and Japan is full of curiosity, and we inquire in vain why delineation did not pass beyond the stage of the silhouette into full chiaroscuro, and why the representations of the human face and figure remained so purely conventional. Mr. Anderson, apropos of the favorite theme of wrestling, remarks that the Japanese had all the opportunities of the ancient Greeks for viewing the naked figure, but made no use of its artistic possibilities. He intimates the connection between Japanese calligraphy and the easy command of the brush which produces such sure and yet flowing lines in picturing drapery and the life and action of plants and animals. After all the lamentation over the passing of the elder Japanese pictorial art, Mr. Anderson is evidently hopeful of what may issue from the adoption of Western methods with the graver. His illustrations, many in color, are beautiful, and those on page 57 show how, by the use of inks of different shades, the printer attained to effects produced by our "overlaying," or Bewick's lowering of the surface of the block. Mr. Anderson abstracts the native account of the engraving process already published by Mr. S. R. Koehler in a Smithsonian bulletin, and exemplified in detail with the tools at the National Museum at Washington. Perhaps the most astonishing statement in this essay is that the Coreans from an early date printed "not only from engraved wood blocks, but also from movable metal type," *teste* Mr. W. G. Aston, who will shortly produce his evidence in the Transactions of the Asiatic Society.

—Kyoto, the "sacred city" of Japan, is now celebrating its eleven hundredth anniversary. No war, however exciting or costly, has suffered the energies of those who planned the Exposition to relax. To the foreign visitor the greatest of all attractions will be the city itself. Nothing else like Kyoto exists in the empire, because for over a millennium it was the focus of Japanese art, religion, history, and politics. In our half of this century it was the birthplace of New Japan. All attempts to change the name to Sai-kyo, Western (in complement to Tokyo, the Eastern) capital, have failed. It still retains the name given

when the first of the seventy-seven emperors transferred the Court from Nara to this "citadel of peace," and the city of both premier and primate of the realm. Three handsome guide-books just issued in Japan have reached us. One in English, entitled "The Kyoto Industrial Exhibition of 1895," is from the competent pen of Captain F. Brinkley, the scholarly editor of the *Japan Mail*. It is a mine of historical and geographical information, and a vade-mecum for the student of art and artistic products. It is issued (with no illustrations) by the Kyoto city government. The others, well illustrated with half-tone pictures from photographs, are in Japanese. They have a line of English under each picture, and are clothed with covers as brilliant as a *géi-sha's* girdle. One describes the famous places of Kyoto, and the other the points of interest in Osaka, Kobé, and on Biwa Lake. The pulse of a Japanese always beats high when describing the "Blossom Capital," and there is no painful excess of modesty in the rhetoric employed. The Exhibition, which opened April 1, will close July 31 unless prolonged, as is quite possible. Among a hundred temptations to press upon space, we note that the bronze-chaser or porcelain-decorator often copies direct from the blossoms that "look in at him through the windows of his workshop"; that the mineral properties of the (mostly dry) Kamo River, like those of the Spaarne at Haarlem, make Kyoto's environs famous bleaching-grounds; and that some of the most illustrious names of noble families, including that of Ichijo, the Empress's, are simply those taken from the nine most ancient streets of this imperial city.

—The Proceedings of the Gibbon Commemoration, held in London last November under the auspices of the Royal Historical Society, have recently been published in a thin vellum-covered volume by Messrs. Longman. The opportunity was taken to bring together, for temporary exhibition, at the British Museum, a collection of Gibbon manuscripts—with somewhat startling results. Few readers of Gibbon's 'Memoirs of My Life and Writings,' published by his friend Lord Sheffield in 1796, have given much thought to the editor's statement that the book was selected and put together from six different sketches. They have very naturally assumed that the printed Memoirs came from Gibbon substantially as we now have them. No one can have guessed at the extent of the editorial "selection." It appeared, however, when the MSS. came to be exhibited and compared, that the work had been done with a freedom only equalled by its adroitness. Mr. Frederick Harrison tells us, in the address now printed, that the six original pieces "are not continuous narratives of different periods of his life; they are all more or less detailed sketches of his life from the beginning. No one of them is a complete whole; nor can any one of them be taken as plainly superior to the rest. They do not observe the same order of narration; they sometimes repeat the same phrases, sentences, and even paragraphs; sometimes they recount the same incident, or work out the same thought, in a totally new form, and even in a slightly different tone." The published life "is made up of passages pieced together with singular skill, first from one, then from another, of the six MSS. The order is constantly inverted; paragraphs, sentences, and phrases are omitted; whole pages disappear, and many characteristic points drop out altogether." "But there is more than this. Entire episodes are suppressed. Passages of Gibbonian humor or irony are omitted. . . . Epigrams are cut out of one MS., and are inserted in the middle of a passage taken out of a different MS." Mr. Harrison gives some surprising examples of editorial manipulation. Perhaps the most noteworthy is the account of Gibbon's love affair with Mlle. Curchod. One can hardly believe one's eyes when one finds that "I sighed as a lover, I obeyed as a son," was taken out of the somewhat cold-blooded account composed in Gibbon's later years, and inserted into the more pathetic narrative he had first written. Mr. Harrison well observes, dropping for the nonce into Gibbonian phrase himself, "I admire the skill, but I tremble at the daring." And this greatly daring person—there seems much reason to believe—was a woman, the daughter of Lord Sheffield, Maria Holroyd, afterwards the first Lady Stanley of Alderley.

—The recent celebration at Venice of the silver wedding of the King and Queen of Italy and the centenary solemnities of St. Mark has been made by the Government the occasion of a reorganization of the Academy of Fine Arts and of the Archæological Museum. The work has been effected by competent men under an order from the Minister of Education, who recognized the necessity of a complete rearrangement of both collections. Old documents disclose the fact that Titian's well-known "Presentation of the Virgin in the Temple" was originally painted for the large hall of the suppressed Scuola di S. Maria della Carità, now occupied by the Academy of Fine Arts. Hence sprang the idea of replacing this picture, which every one knows to be one of the chief attractions of the Academy, in its original position, so that the full effect intended by Titian should be obtained. This has been done. From similar motives, one of the side rooms has been remodelled so as to reproduce exactly the octagon chapel of Saint Ursula where formerly were Carpaccio's scenes from the legends of this saint. Paintings by Bellini, Sebastiani, and others, removed hither from the Scuola di S. Giovanni Evangelista, have likewise been placed in positions corresponding as nearly as possible to the original. The contents of the Archæological Museum had been in even worse disorder than the Art Gallery, so that a large part of the collection had been wholly withdrawn from exhibition. To Dr. Lucio Mariani of Rome was given the task of bringing a scientific classification out of this chaos. The new arrangement has led to the opening of five additional rooms in the Ducal Palace, which have hitherto been closed to the public. The decorations of the walls and ceilings as well as the fine chimney-pieces add to the interest of these rooms. Both the entrance and the exit to the Ducal Palace are now, in consequence of these changes, by the Scala d'Oro, which increases the impressiveness of a passage through these rooms. A branch of the Scala d'Oro, ornamented by remarkable stucco, is also now opened to the public for the first time. The action of the Government in making its contribution to the Venetian festivities one of permanent interest will be appreciated by future visitors.

—Philo the Jew, who lived in Alexandria at the opening of our era, had no theory of the inherent antithesis between Hellenism and Hebraism. Taking the Scriptures of his people in a mystical, and at times in a Pickwickian sense, he combined the refinements of monotheism with an eclectic Gentile philosophy, and clothed the whole with a graceful Hellenic culture. Mr. Conybeare, in editing Philo's characteristic essay, 'About the Contemplative Life' (Macmillan), had an eye to chiefly controversial ends, but he has, nevertheless, laid the merely literary student under an obligation. Glossaries and a learned commentary give the reader a philological apparatus for the study of Philo's works similar to that of the later Greek writers furnished in Schmid's 'Atticismus.' The logic of the excursus is convincing in favor of the authenticity of the work, but whether the reader prefers to be right with our editor and Renan or wrong with Zeller and a deal of good German company; and whether he believes that the Egyptian ascetics described by Philo were the earliest Christian monks, or a Jewish sect, or, as Renan contended, an imaginary people, invented by Philo as a *pendant* to the Essenes for the glory of Egypt—however profoundly the reader's soul may be at rest on these points, he will not be insensible of the charm of the essay. It gives a picture of the winning asceticism of a mind in which the pleasure of high thinking far outweighs the pain of plain living, and whose delicacy is outraged rather by the vulgarity than by the sin of the world. With Plato "beside him singing in the wilderness," this Jew found the wilderness "Paradise enow."

CHARLES BRADLAUGH.

Charles Bradlaugh. A Record of his Life and Work. By his daughter, Hypatia Bradlaugh Bonner. With an account of his Parliamentary Struggle, Politics and Teachings, by John M. Robertson. Putnams. 2 vols., xvi, 400, xii, 439, portraits and illustrations.

THIS is not a particularly well-digested narrative—it is in truth three books in two volumes, but, taking it as a whole, we have graphically and interestingly treated the career and character of a remarkable man—one who from humble beginnings, in the face of difficulties; self-weighted with the name of "atheist," won a high position before the world, and compelled the respect if not the admiration of those with whom he was brought in contact. Seldom was man more unjustly maligned; seldom has any man been better vindicated as to the general tenor of his life and actions. He was held back by none of the humilities, reticences, questionings, old associations, reverences, or prudential considerations that influence most men regarding the promulgation of negative religious teachings. He felt it laid upon him to devote his great powers of mind and of speech openly to the weakening of beliefs which are to most men their greatest consolations and support in life, and which are generally believed to be at the foundation of civilized society. For others he acted as a Winkelried, receiving into his own bosom shafts of condemnation, ridicule, and opposition, and making for them the path of life smoother. We have at the opening of the first volume his portrait as a saucy young dragoon; towards the end of the second, an engraving taken from that moving painting of him, an earnest, cultivated, weary man in advanced life, pleading his own cause at the bar of the House of Commons. These illustrations may be said to mark the developments through which he passed.

He was born in London in 1833, and was there domiciled during life. At fourteen he was suspended from Sunday-school teaching, when preparing for confirmation, for question-

ing the harmony between the New Testament and the Thirty-nine Articles. He was deprived of his situation as messenger in a solicitor's office, and was turned out of doors by his father. He drifted into free-thought circles, and soon developed those views which he subsequently preached:

"I do not say there is no god, but I am an atheist without god. To me the word 'god' conveys no idea, and it is because the word 'god' to me never expressed a clear and definite conception . . . that I am an atheist. . . . The word 'god' does not, to my mind, express an eternal, infinite, omnipotent, intelligent, personal, conscious being, but is a word without meaning and no effect other than it derives from the passions and prejudices of those who use it."

His determination to give open expression to such opinions moulded his whole life. He had to enter the army at first to obtain a living. He passed a middle life of turmoil and unrest. He was in his latter years hurled breathless and with torn habiliments from the steps of the House of Commons. St. Paul's words instinctively rise to the mind of the reader: "In labors more abundant, . . . in prisons more frequent, . . . in journeyings often, in perils of waters, . . . in perils by mine own countrymen, . . . in perils in the city, in perils in the wilderness, in perils in the sea, in perils among false brethren; in weariness and painfulness, in watchings often, in hunger and thirst, in fastings often, in cold and nakedness."

His father died while he was in the army, and his mother bought him out with the proceeds of a small legacy. He again obtained a situation in a lawyer's office. He gave himself to study, and became such a proficient in knowledge of the intricacies of the law as to be able to conduct cases for his employers, and to plead and win causes for himself and in the interests of free thought and political advancement before the highest courts in the kingdom. He acquired a working knowledge of some of the ancient and modern languages, besides a wide acquaintance with literature. As "Iconoclast" (so as not to interfere with the business prospects of his employer) he took a prominent part in the reform movements of his time, became the leader of the secularist party in Great Britain, engaged in public discussions, and added to his income by lecturing. In 1870, at the age of thirty-seven, he relinquished his employment, and thenceforward openly, under his own name, gave himself to public affairs and literary work. His marriage turned out unhappily through the intemperance of his wife. To lessen the temptation to which she was exposed in town, he broke up his home and sent her to live in the country. His daughters were the delight of his life. Many charming pictures does Mrs. Bonner give of the simple domestic pleasures of their early life. Their time was divided between alternate care of their mother, and residence with their father in hired apartments. After their mother's death they devoted themselves entirely to him. The death of the elder, Alice, was one of Mr. Bradlaugh's greatest troubles. Economical to a degree regarding personal family expenditure, he was never out of money difficulties. A well-stocked working library, a few articles of simple furniture, some presents from Indian natives grateful for his exertions on behalf of their country, and a few thousand pounds of liabilities, were all his "possessions" at the last. His debts were attributable to his generosity to others, expenditure upon the causes in which he was interested, his newspaper ventures, and the lawsuits in vindication of his principles or of public rights in which he was ever being entangled.

His life was pure. He was in his early days an earnest teetotaler. As a soldier, when in Dublin, he often broke bounds to deliver teetotal speeches "in my scarlet jacket, between James Houghton and the good old Father, the Rev. Dr. Spratt, a Roman Catholic priest." Later on, he was persuaded, from motives of health, to take light wine at his dinner. He was a warm, true, and long-suffering friend, a hard-hitting though fair and honorable opponent. His Anglo-Saxon temperament was eminently shown in his love of law where he believed law was, as in England, based upon the popular will. Physical force was exercised by him in resistance to constituted authorities only where he believed he had the Constitution on his side. He counselled submission whenever the law was decided as being against him. The hatred and opposition which he encountered, the threats of personal violence so often levelled against him, doubtless led to his keeping a revolver by him. The threat of its use appears to have served him well upon more than one occasion, when travelling upon political missions in Italy and in Spain. He was a born republican, though by no means a born democrat—at least his democracy began to show signs of wearing thin in later life.

Mr. Bradlaugh was a man of strong feelings held completely under control: "I have not a passion that I could not crush as easily as an egg within my hand if it were necessary for the good of the cause I love," he exclaimed upon one occasion, stretching out his arm and closing his fingers over an imagined object. He must have had a strong constitution to hold out so long under the incessant labors to which he subjected himself. We come upon passages such as the following:

"During the past twelve months I have addressed 276 different meetings, four of which each numbered over 5,000 persons; eighty of these lectures have involved considerable loss in travelling, hotel expenses, loss of time, etc. I have, during the same time, held five separate debates, two of these also without remuneration."

"'I arrived in Glasgow just one hour before the time fixed for the morning lecture—dirty, weary, hungry, thirsty, and sleepy.' After the evening lecture Mr. Bradlaugh had to hurry . . . to catch the train, which steamed out of Glasgow at 8:40, so that he might be in time for Monday morning's business in the city, having spent two nights out of bed, travelled about 900 miles, and spoken at Bedlington and three times in Glasgow in less than forty-eight hours."

We read of his having at times, for lack of means, to carry heavy baggage, to go without proper food, and leave his bag in pawn for his railway fare, and then "the most amusing feature was that an opponent, endowed with extra piety and forbearance, chose that evening to specially attack me for the money-making and easy life I was leading."

Like Izaak Walton and his great contemporary, John Bright, he found his principal relaxation in fishing—when a boy, following his father to ponds near London; when a man, accompanied by his daughters to the same places, and later on snatching a few days on Scottish lochs. These volumes abound in racy anecdote. Some of the most interesting chapters are devoted to the genesis and natural history of the fictions so pertinaciously circulated regarding the sayings and doings of persons of his opinions. He made several lecturing tours in the United States. He received the formal thanks of the French Provisional Government for sympathy shown after the fall of Sedan. Some months later he was refused entry into the country on account of pity manifested towards the Communists. He paid, as we have said, visits to Italy and to Spain, both in the cause of republicanism. There was a close and intimate, though blameless, alliance between him and Mrs. Besant during thirteen years of their lives, from 1874 to 1887, in the free-thought propaganda and in the editing of the *National Reformer*. His daughter writes:

"They were mutually attracted; and a friendship sprang up between them of so close a nature that had both been free it would undoubtedly have ended in marriage. In their common labors, in the risks and responsibilities jointly undertaken, their friendship grew and strengthened, and the insult and calumny heaped upon them only served to cement the bond."

Misunderstandings as to their relations perhaps not unnaturally arose from their association in the popular promulgation of delicate physiological statements generally thought proper only to be considered in treatises intended for the eyes of the medical faculty. The alienation of these friends came about through Mrs. Besant's espousal of socialistic and theosophical opinions.

No man ever passed through greater difficulties and stranger experiences in the House of Commons. For fourteen years he looked to entering Parliament. He was at length elected for Northampton in 1880. It was six further years before he won the unquestioned right to sit, speak, and vote. The difficulty arose out of the oath of allegiance. His desire to be permitted to affirm was at first refused. He expressed himself willing to take the oath, but he was, on account of his opinions, declared incompetent. He administered the oath to himself without obtaining recognition of its validity. He was then allowed to affirm and take his seat at his own legal peril. The courts decided against the legality of his position. Through clouds of actions for illegal sitting and voting, and on his part against the officers of the House for assault and exclusion, the struggle proceeded. Eight times were heavy majorities cast against him; five times was he removed by force; several were the committees struck to consider his case; four times the seat was declared vacant and he was reëlected by Northampton; upon as many occasions did he plead his cause at the bar. These undignified proceedings were brought to an end at the opening of Parliament in 1886. The new Speaker (Mr. Peel, who has just now retired) refused to interfere with his taking the oath. Mr. Bradlaugh showed true magnanimity in his subsequent bearing. Not a grudge did he show towards those members who had opposed, or towards the officers of the House, many of whom had roughly handled him. In the face of anticipations to the contrary, he (different from many outside platform celebrities who had entered the House) proved a complete parliamentary success. He was a stickler for its customs and its honor. One of the clearest handbooks on parliamentary procedure is from his pen. He made his mark in debate and on the statute book. In 1888 he carried a general affirmation bill, which passed the House of Commons and became a law. He advocated the cause of Ireland as if the majority of her members had not been his most virulent opponents. Had he lived he would doubtless have attained to office. As, on the 27th of January, 1891, in his fifty-eighth year, he lay dying in his humble lodgings, surrounded by the love of friends, attended by the untiring devotion of his daughter, and called upon by the Prime

Minister, the House of Commons, without a dissentient voice, passed a resolution expunging from its journals the resolutions excluding him in former years.

MORE NOVELS.

A Divided Heart, and Other Stories. By Paul Heyse. Translated into English with an Introduction by Constance Stewart Copeland. Brentano's.

An Altar of Earth. By Thymol Monk. G. P. Putnam's Sons.

Marsena, and Other Stories of the Wartime. By Harold Frederic. Charles Scribner's Sons.

On Cloud Mountain. By Frederick Thickstun Clark. Harpers.

The Unbidden Guest. By Ernest William Hornung. Longmans, Green & Co.

Sweet Clover. By Clara Louise Burnham. Boston: Houghton, Mifflin & Co.

The Untempered Wind. By Joanna E. Wood. J. Selwin Tait & Sons.

Pomona's Travels. By Frank R. Stockton. Charles Scribner's Sons.

Transplanted Manners. By Elizabeth E. Evans. London: Swan Sonnenschein & Co.; New York: Scribners.

The Pollinctor. By James T. Bowyer. Richmond, Va.: J. W. Randolph & Co.

Danvis Folks. By Rowland E. Robinson. Boston: Houghton, Mifflin & Co.

"Realistic as Balzac, analytic as Tolstoi, picturesque as his own countryman Ebers," is the summing up of Heyse's endowments by the translator of three of his short stories; and with some deductions this is a fair criticism on the volume. Heyse's realism consists not so much in depicting real men and women as in making them very much alive even when they are wholly improbable; and this is the artist's function. In analysis his method is to show that he has deeply studied the human mind, and to avoid working out the problem in public. The complexities of life's situations are presented in a thousand differing phases, and the answer to the problem, or its unanswerableness, is made clear, yet no figuring on the blackboard goes on; the truths are left to tell their own story. Picturesque he is, too, in use of language, quick in feeling for the varying aspects of nature, and guarded in the use of this sense. "Minka" and "Rothenburg on the Tauber" are, to our thinking, more complete works of art than the longer story which gives the book its name. It is not that the characters therein are less real, but the crisis is less real; and here is Heyse's strong point, wherein, if he weakens, his story totters—the dealing, namely, with mental, moral, or emotional situation. There is an improbability of inner experience which is wholly different from that of character, and which is far less tolerable. The two succeeding stories, little masterpieces of pathos and truth, carry the reader along in constant sympathy. As to Heyse's style, it is of a beautiful finish and fine grain, and makes readable even the least commendable of his stories. The translation is well done, as by an enthusiastic student of the original.

'An Altar of Earth' (*Earthy* should have been added) is evidently written by a member of the sex whose mission is to exalt and refine: "Let us have the suffrage, O man! and we will elevate you." A book like this is full of suggestion on the point, for it prompts one to ask, "Has woman elevated literature?" 'An Altar of Earth' is full of advanced views on the woman question, the man question, the Socialist question, and has enough clever paragraphs to make it worth while to say that it is one of the most untidy, uncleanly, unwholesome, unsound books of the year. What has got into the women writers of England? Socialism, about which a great deal (but nothing new) is said, is made a peg whereon to hang such objectionableness of style, thought, and substance that capital itself would convert to pity if it had such meet food as a socialism pressed into so unsavory service. A naphtha bath offers hopes for some books, but of this one, after a mere cleansing, the residuum would be inappreciable—a clear waste of good naphtha. We advise the cheap and thorough fire.

Mr. Frederic's stories of the wartime are constructed thoughtfully and written admirably. They are full of a feeling which is all the more manifest from not being insisted on. The tragic stir of the days of the rebellion, as it affected certain small villages in the Empire State, forms the subject of the sketches; the homely humor of the village scenes is thrown up with telling effect against a background of war and death. The small boy's point of view adds to the narrative novelty and a certain ingenuousness of manner, inclining the reader to the mood of that great man who never could see a boy without wanting to give him a quarter. The age and the day when a firecracker and the guns of Vicksburg were only small and great brothers have had no more sympathetic delineation than in the story of "The Eve of the Fourth."

The dialect of Illinois transplanted to "Collyrado" in Mrs. Clark's novel is worth reading the novel for. Particularly as found adorning the speech of old Mrs. Irish is it peerless. Her whole character, indeed, is so original that if one did not care for mystery and murder and landscape, one might edit Mrs. Irish out of the volume and find copious entertainment. The mystery is well planned, but less well presented since one has divined it long before the end. The pictures of the hardest side of ranch life are appalling in their cruelty. Those of its kinder aspect are melancholy enough, but would be relieved if only we might, for a single incident, get rid of the landscape, which pursues one through the pages like an avenging bore, and on the whole is the most tragic feature of the novel. With Caliban, and reduced to his temper, the reader cries out, "There's wood enough within—what ho!" Old Mrs. Irish's threat, "There'll be scenery in this family!" takes on a meaning she did not suspect.

The 'Unbidden Guest' is a study of a music-hall singer, showing a great many of her manners and one of her songs and dances in full. How this young person stirred up an Australian country home, introducing herself there by fraud, how the mother suspected and not unnaturally flouted her, how the daughter looked askance, but, being saved by her from ruin, turned into her champion, how the men of the household became her credulous and affectionate slaves at once, and what good came of it at last, if any, may be read in the well-printed volume. Australian life, with its scenery, figures and speech, is the accompaniment to the story, and is given realistically but without fatiguing detail.

'Sweet Clover,' like all Miss Burnham's stories, is of the innocuousness which has too far fallen into desuetude among story-tellers. There have been times when it has been said of her books, almost as a reproach, that they were as milk for babes, food for convalescents, and so on. The harmlessness is still observable in her latest novel, and there is still a tendency to "pie and piety." But it is a "Romance of the White City," and in the very words lies a charm to make criticism "forget its errand." So we advise all the simple-hearted and true who did not visit the great Fair, and above all those who did, to read this little book, for all its doughnuts and buncombe, and float in gondolas, glide in electric launches, make rendezvous in State buildings, dream by sunset, marvel by the light of fireworks, steep themselves in beauty of architecture, and shed a tear over the burning of the peristyle. One almost repents of giving a book so damning an epithet as harmless, remembering how therein it has been read that Gilbert is "the only librettist in the world who says just what he wants to say and it happens to rhyme"; and that a girl's questioning of herself should be, not, "Can I live with this man? but, Can I live without him?" and that one of the Fair-goers rechristened a certain street as the Mudway Nuisance, and that Aunt Love declares, "When I want a good time, I ain't goin' to try to get it bein' trod on by camels and yelled at by Turks, all the time smellin' smells I don't know the name of and would be afraid to. No, sir."

Readers of 'The Untempered Wind' are entitled to claim the sympathy due to shorn lambs. It is a story of the sad life of a girl who was a mother yet no wife. One might expect it to be bitter, but it is also sour and scolding—a temper which never yet lent effectiveness to literature or persuasion to morality. The unhappy heroine lived in a village peopled by a race whose rickety degeneration through long intermarrying is repulsively emphasized. There is not a spark of feeling up and down the whole length of the village street, or of anything but a disgusting brutality except in the case of the two men who are in love with the heroine. She, the technical sinner, is not only an angel but a monopolist of goodness, and not only of goodness but of ordinary humanity. The life in a farming country, with its rotation of crops and seasons and flora and fauna, is described with intimate knowledge and wearisome abundance. As a whole, the book leaves the reader feeling like one who has eaten a kid seethed in its mother's milk.

We all love Pomona and her high-flown language. She is a delicious figure of speech. Yet her book of little journeys in England and Scotland reminds one of the eyes of Matthew Arnold's heroine, which were "too expressive to be blue, too lovely to be gray." Her letters are written almost too guide-book wise for humor, and are quite too Pomonal for mere letters of travel. The reader finds himself trying to digest two unassimilated portions, rural England and extract of Pomona. Decidedly, her especial humor, always delicately evanescent, runs very thin spread over the superficies of Great Britain. Yet Pomona she remains in spite of marriage, money, and culture, and as such dear to every acquaintance. This is a characteristic morsel from the journey on a Scotch steamer, in reference to an English tourist:

"As we got near the Clyde, the gentleman began to talk about ship-building, and pretty soon I saw in his face plain symptoms that he was going to have an attack of comparison making. I have seen so much of this disorder that I can nearly always tell when it is coming on a person. In about a minute the disease broke out on him, and he began to talk about the differences between American and English ships."

More internationalism is found in Mrs.

Evans's novel 'Transplanted Manners.' Her point of observation is a German *pension*, where the narrator lives and keeps a diary. Under her view there pass Russians, Hungarians, Greeks, Germans, English, and Americans. They come and go as figures do at a *pension*, and afford a moving panorama of race studies. The writer has obviously suffered from fellow-countrymen abroad, and her revenge—or, to be just, her self-imposed mission—is the portrayal of Americans compared with whom Daisy Miller was prudish and Lord Byron conventional. "Oh, my beloved country!" writes she; "what is to become of us as a people if the rising generation be allowed to follow all their whims from infancy to maturity unchecked, and obedience to children be considered the first duty of parents? How can we govern ourselves as a nation if self-control be not the earliest principle inculcated at home?" "The most perfectly well-bred persons I have ever met," she observes elsewhere, "have been Americans, because their good manners were the result of good feeling, and their tact was directed by taste, so that the result was harmonious character, not borrowed polish." Her strictures, therefore, it will be seen, are prompted not by prejudice but by patriotic yearning, and in a good cause she has forced herself to see and say many disagreeable things, which make her book a manual of instruction better fitted for parents and guardians than for young persons. The force of the lesson is heightened by unusual intelligence and good literary form with undoubted sincerity. Two reflections suggest themselves. First, that if there are such American manners floating about in Germany or elsewhere, something ought to be done about it; second, what?—with the added queries whether one who washes soiled linen as for Heaven's laws makes that and the action fine—or one—or neither? Aside from the main purpose of the book, some interesting secondary subjects are touched upon, as the art criticisms in connection with the operatic début of one of the characters, and, notably, some striking paragraphs on cremation and the accidental burial of the living.

No, gentle reader, we shall not tell you what a Pollinctor is. You will find out if you read Mr. James Boyer's book and have a dictionary at hand. You will need several dictionaries; you will find yourself floating in erudition legal, political, agricultural, medical, theological; erudition combined with such phrases as "The sun was making a crimson set," "More apt she has heard of," etc., "Very seldom young and healthy men like he admit death practical into their minds," "These talkers have no children of their own. If they had they would believe like I do in the rightfulness of my daughter," and this following, from an ode on Bull Run:

"And while the boy was staunching blood with band,
A cannon-ball came rolling 'long the land,
And struck the father's head with force enough
To put out life which had burned down to snuff."

The ode, which we learn, "it would not be fair to subject to the test of a cold and rigid reason" (and we ourselves think it defies coldness—certainly rigidity), is admitted by the writer "to fall short of Horace Flaccus," but it seems that Jefferson Davis "has been heard to speak of it as the best literary production of the war." The graceful directness of these phrases is offset by floods of that fine writing which seems to spring naturally and flourish abundantly wherever the African microbe is nourished in the leisure of the white South. The arguments for secession and the abuse of Yankees will be found entertaining, but they hardly atone for the gruesomeness of the story, which, viewed as a piece of literature, is travesty not remarkably pure or simple.

Mr. Robinson's book is a rich storehouse of folk-lore and folks-lore. His Vermonters belong to the well-nigh pre-maple-sugar period of history, to the time when the heroes of Bennington and Plattsburgh were still telling their tales and groaning over the unsoldierly quality of the degenerate June trainings of fifty or sixty years ago. The cares and joys, the raising bees and apple-dryings, but chiefly the huntings and fishings of Danvis, are described with a fine simplicity and a gentle unction that reflect the neighborhood spirit. The volume is one of more than passing value as a faithful record of manners and customs, and especially of dialect. That of Vermont has never been better set down, and that of the transplanted Canadian is matchless, and here first recorded, "prob'ly," as Antoine himself would say—delightful Antoine, who thought that more than half the time "de fun aut pay fer de troublesome fer get marry."

A Textbook of Invertebrate Morphology. By J. Playfair McMurrich, M.A., Ph.D. Henry Holt & Co. 1894. 8vo, pp. viii, 661, 291 figs.

MORPHOLOGY is defined as the science of form—by form meaning internal as well as external structure. The early naturalists, by force of circumstances, were obliged to confine their studies chiefly to external features, or those parts of the organism which by reason of their solidity were least perishable, such as the shell, the skeleton, or the exoskeleton. With modern methods came the opportunity for searching study of the softer tissues and the embryonic stages—a field so attractive and fruitful that for a time the student seemed to forget that animals possessed any organs of importance which could not be cut with a microtome. A reaction from this one-sideness was inevitable, and broader views have of late increasingly prevailed, especially in America; yet it is still true that by morphology is generally understood a combination of embryology, ontogeny, and microscopic anatomy, and for information about the salient characteristics of external form, or the interrelations of form and function which have done so much to determine both type and structure, no one would think of consulting a manual of morphology. The most important step towards remedying this unnatural divorce of the older and the newer biology which has been made of late, is the publication of Lang's splendid 'Lehrbuch der vergleichenden Anatomie, of which an English translation by Bernard is in progress. Putting aside matters of opinion, about which students will always find reason to differ, there can be little doubt that the work of the Jena professor stands foremost among recent handbooks of the subject, and with it must newer candidates for favor expect to be compared.

Prof. McMurrich's 'Text-book' is planned on much the same lines as Lang's, though condensed to about one-half the length and much less fully illustrated. For teaching purposes the condensation is not objectionable, and might have been carried even further with advantage; or, at least, a further separation of important from less important detail, indicated by a difference of typography, would have been an improvement. The classification adopted differs in several respects from that of Lang, and some of these differences appear to be original with Prof. McMurrich. Thus, Lang divides the invertebrate Metazoa into seven phyla, or branches, of the animal kingdom, not counting Enteropneusta of uncertain rank. The same animals are regarded by McMurrich as constituting ten "types," with several unassigned and more or less isolated small groups. In one or two of these cases we think the change is an improvement, especially in the constitution of the Prosopygia, while it is probable that the general opinion will be that in separating as primary types the Crustacea, Tracheata, and Arachnids, the distinctions between them have been overvalued.

The chief difference which will strike the observer on a comparison of these two textbooks is the much better subordination and system (seen not only in the text but in the typography) of the German work, and especially (as regards the latter point) in its English version. In a text-book, to learning should be united a grasp of the subject which will present biological truth to the unaccustomed eyes of students in something like its natural perspective, but with a diagrammatic saliency of the most important facts. In this the work under review decidedly fails. In chapter ix. are brought together an order, followed by two classes, another order, and, lastly, a genus, all (according to the author) of doubtful affinities. Such a course cannot be but confusing in the extreme to students, and has not been found necessary by other biologists. The same confusion appears even in the nomenclature, where (p. 461) we find the accepted terminology for a family applied to a division of ordinal rank, while in other places orders appear not referred to any class. Few entomologists will accept an arrangement such as that on p. 528, which associates Pulex and Melophagus as diptera, contrasted with Culex and Musca merely by the absence of wings. This, the only important deviation by the author from Lang's arrangement of the insects, is not a happy one.

Leaving these matters of form and mode of presentation, we may inquire briefly into matters of detail. Of course complete accuracy should not be required and cannot reasonably be expected in works which contain such a mass of facts as these text-books. However, in adopting Lang's characterization of the mollusca it would have been well to modify the phrase which speaks of the circulation as "open," since the researches of Menegaux and others have conclusively shown that this circulation, while partly lacunary, is completely closed. Another error, corrected in this country over six years ago, but overlooked by Lang, is the statement, copied by our author, to the effect that a verge is absent in the Diotocardia. This is true only of the littoral forms.

Most biologists would not have associated the Nemerteans with the Platyhelminths. The inclusion of Amphioxus in the Protochordata is not without some warrant, but will be questioned. Here it would have been in accordance with usage to adopt Cephalochorda for the type name and retain Leptocardia for the class. But it must be conceded that our author does not sin in this matter above other morphologists, who, as a class, ignore both consistency and usage in matters of nomenclature.

Since of students in biological courses those who intend later to pursue medical studies profit more from their work in zoölogy than almost any others, we regret that the author has not devoted more space to recent discoveries in parasitology. *Coccidium oviforme*, with its alleged peculiar development by an alternation of spore-generations, is certainly important both from a morphological and a medical standpoint, and there is hardly a form

which has been more frequently cited in medical literature during the past five years than this species; yet we do not find it mentioned. The animal which causes malaria is another form that is most important, from both a practical and a morphological standpoint, yet it receives no attention. The treatment of the entire group of Sporozoa leaves something to be desired. The chapter on Platyhelminthes is on the whole satisfactory, but the general discussion of homologies is marred by several errors in biology and classification. It would have been well had the author followed helminthologists in adopting a separate order Cestodaria for the genera *Archigetes* and *Caryophyllæus*. On p. 158 it is stated that the dog-tick is the intermediate host of "*Tænia cucumerina*." This passage should read that the dog-louse (*Trichodectes canis*) and the dog-flea (*Pulex serraticeps*) are the intermediate hosts of *Dipylidium caninum*. There is no authority, so far as we know, for the statement that the "dog-tick" (*i. e.*, *Dermacentor americanus*, Linné) harbors the larval stage of this worm. On p. 159 the author is in error in stating that "*Tænia solium* is by far the most frequent tapeworm of man," and that "*T. saginata* is of less frequent occurrence." Directly the reverse of this statement obtains, and this is an important point for the medical student to know, since the larval stage of *T. solium* as well as the strobila develops in man. An attempt is made to render the chapter on Nemathelminthes of practical as well as scientific importance, but unfortunately the chapter is far behind the times. It is not clear to the reviewer what McMurrich considers "obscure" regarding Ascaris, Trichocephalus, and Oxyuris, since these forms are now pretty thoroughly known.

In regard to *Trichina spiralis* the following statement is made: "Each female may deposit in the intestine as many as 1,000 eggs, from which, in the second or third week after injection, young *Trichinæ* measuring 0.01 mm. hatch out and at once proceed to bore," etc. This does great injustice to the activity of the mother Trichina, for, in reality, she becomes mature in two and a half to three days, and then lays 5,000 to 15,000 young, and the latter are well developed and ready to escape within six days after the infection. The viviparity or oviparity of the adult, and whether the young are able to lead an independent life within five days, or two or three weeks, may be very unimportant questions in many animals, but when we are dealing with a parasite which causes several hundred cases of disease (trichinosis) and many deaths every year in Germany, and whose ravages are not unimportant in America, it is desirable that these details should be stated correctly, if at all, in a text-book destined to be put into the hands of students preparing for a course in medicine.

The morphology of chapter viii. is not all that could be desired, and one is surprised to see that Kaiser's work on the Acanthocephala is not noticed. The treatment of these animals affords an excellent example of the desirability of referring a text book of this kind to specialists in the various groups before publication. On page 182 it is stated that Melolontha is the intermediate host for *Echinorhynchus gigas*, a statement which, of course, is correct. But for an American book, to be used in American colleges, it certainly is worth while to mention the fact that Melolontha does not occur in this country, and that here Lachnosterna forms the intermediate host of this parasite, which is extremely common in American hogs. Defects of this sort would have been noticed by any specialist had the chapter been submitted for expert examination.

It should be said that those departments in which the author is especially at home are naturally more effectively treated. In general, Prof. McMurrich's style is clear and easy and the proof-reading is excellent. An effort has been made to refer to American literature of the different topics while condensing the bibliographic references, and there are good indices. In spite of the defects of method which we have noticed, the work will be useful to students and teachers, and, in the subsequent editions which will no doubt be called for, we may anticipate such a reformation of incidental details as experience and criticism always suggest.

Birdcraft: A Field-Book of Two Hundred Song, Game, and Water-Birds. By Mabel Osgood Wright. Macmillan. 1895. 8vo, pp. xvi, 317, plates.

Pocket Guide to the Common Land-Birds of New England. By M. A. Willcox. Boston: Lee & Shepard. 1895. 12mo, pp. xii, 158.

Summer Studies of Birds and Books. By W. Warde Fowler. Macmillan. 1895. Sm. 8vo, pp. viii, 288.

THIS is the season when, according to one authority, the young man's fancy lightly turns to thoughts of love; when a newer iris gleams upon the burnished dove, when the wanton lapwing gets himself another crest, and when various other incidents mark the ornithological calendar, including a steady output of bird-books from the press. They hatch with regularity, and so numerously that we are reminded rather of the artificial incubator than of the natural hen—most of them to die in pin-feathers, a few to acquire full plumage.

We should not be surprised if Mrs. Wright's 'Birdcraft' proved to be one of these few. She certainly shows the literary craft which would go for much in the lack of the many other admirable qualities her work displays. Her book belongs distinctively to the class of writings about birds with which such names as those of John Burroughs and Wilson Flagg have long been associated, and with which Mrs. Olive Miller's has more recently become connected. She is clearly in love with her subject, and her pliant pen adorns bird-traits with many charmingly turned expressions of decided originality. Mrs. Wright is perhaps nowhere happier than in the phrases she applies to birds' songs. The attempt to imitate these in words is always more or less of a failure, for the thing cannot be done; but this author makes some happy shots at a mark that can never be hit, and her fresh misses, in great variety, are an agreeable change from those which have been stale since Nuttall. Mrs. Wright's individuality stamps the book as something out of the common, and this is so attractive that, as we premised, her work can hardly fail to achieve success.

This desideratum seems to us all the more probable on turning from the pleasantries to the technicalities. If Mrs. Wright is quite happy in the former, she is not less wise in the latter; for the book smells of the closet, besides exhaling the fragrance of the woods and fields. Each of the biographies in which the author frees her own mind is preceded by due formalities, in which she is minded to observe the dogma and ritual of the established high church in all matters of nomenclature, diagnosis, habitat, and the like. Such orthodoxy cannot fail to find favor with the hierarchy of the present ornithological dispensation, and secure plenary indulgence for any sin of omission or commission of which she may be convicted between the covers—with one possible exception, which may be rather her fate than her fault. We refer to the colored plates. These are flashy and trashy—penny-dreadfuls of some experiment which the publishers seem to have tried, and which we advise them to retire from all the unsold copies. They are out of place in such an otherwise wholly praiseworthy book. The plain plates are not so bad.

The 'Pocket Guide' is "such a little one," and so modest withal, that if we count it all, we have no fault to find with it. The author says that "this little book is the outcome of a long experience in teaching college women to study our common birds." It treats nearly a hundred species, probably all of which may be observed at Wellesley College, where the author is professor of zoölogy; it treats them briefly, with due regard for the technical proprieties, "without fear and without reproach"—unless the author could be twitted with the fact that sandpipers are not among the land birds the title calls for. The pedagogy of the book is represented by artificial keys, which have been found useful and acquired increasing vogue since their introduction into Dr. Coues's 'Key' in 1872. This pocket-book may find its own niche of usefulness for beginners, though most students of New England birds will soon turn to Samuels, or to Chamberlin's Nuttall, or Brewster's Minot, or the Coues and Stearns Manual which the same publishers carry.

One might take up Fowler's 'Summer Studies of Birds and Books' with the expectation of being entertained with some pleasant gossip of the "outing" kind—for English field-naturalists rival our own in fecundity of *entretiens* anent their birds. But as one paragraph after another surprises and delights us, we open our eyes to the fact that we have in hand a rare book. It may be small-talk, in a sense, but it is said in a large way—at ease, at leisure, with all the power of ripe scholarship held well in hand. The writer is here released from the more arduous if not more serious vocations which must be habitual with him; he invites us to enjoy his vacation with him; and we should have been very sorry to miss such companionship. Most of the pieces gathered in this volume have appeared before, but have been to some extent rewritten in fitting them together. Probably the most intrinsically valuable chapter, as a contribution to science, is that one on the songs of birds, which contains many interesting and technically accurate observations, besides figuring the oscinine syrinx intelligibly. We should hardly know where to turn for a clearer or more comprehensible account of this subject, though we have many more elaborate ones of entire reliability. It may be our individual preference when we point to the chapter on Aristotle's birds as the one which has interested us most. Aristotle, of course, we have always with us, and Sundevall has elucidated his ornithology with great care and success; but our present author discourses on this classic theme in quite another vein, altogether admirable. It should be a caution to rash moderns who compound specific names of birds with Greek words for colors, fancying they know what these words meant to those who spoke them! The chapter on White of Selborne will doubtless suit English readers better than it may American ones. We have our own fetishes, and have established the cult of Wilson, Nuttall, and Audubon; but we have no quarrel with those who find White, Bewick,

and Walton to be names as easily conjured with. "A Chapter on Wagtails" is perhaps a fair example of our author's style, and we cannot forbear to quote one passage:

"It is impossible ever to weary of Wagtails. We are never altogether without them, yet whenever they present themselves to us we are constrained to give them our attention. Some birds you can glance at as you walk and talk, but no sooner does a Wagtail alight on the path in front of you than he compels you to pause and look at him carefully. There are, indeed, excellent scientific reasons why Wagtails should always be noticed; but apart from these there is a never-failing pleasure in contemplating their symmetry of form, their beauty of coloring, their graceful flight, their unobtrusive confidence, and that constant unresting activity of theirs—an activity which some mysterious grace of mental build never suffers to degenerate into fidgetiness."

There is something about the concluding clause of this extract which seems to us to characterize the book itself as well as the bird. Wagtails appear to be special pets of the author's, perhaps for some such reason. For the rest, we are glad that a certain "grace of mental build" was found in the author to permit him to include the memoir of his old friend Billy, although, as he says, that chapter "has to do neither with birds nor books." If half we are told about Billy be true for any but his personal friends, he certainly was a wonderful dog; and if there never were such a dog, we should have still to thank the author for an ideal. Everybody ought to make Billy's acquaintance, besides reading all the rest of these altogether admirable 'Summer Studies.'

History of the City of Rome in the Middle Ages. By Ferdinand Gregorovius. Translated from the fourth German edition by Annie Hamilton. Vols. I. and II. London: Geo. Bell & Sons; New York: Macmillan. 1894.

THE appearance of an English translation of Gregorovius's 'Geschichte der Stadt Rom im Mittelalter' is a noteworthy incident in the rapid growth of interest in mediæval matters at the present time. To launch an eight-volume history upon a world which is said to be given over to the reading of newspapers shows either extraordinary courage or extraordinary cleverness on the part of translator and publisher. To scholars, the great work of Gregorovius has long been known as combining in a rare degree the merits of wide scholarship, clear historical insight, and attractive presentation. Partly, perhaps, because its author, unlike most German historians, was not a university man, his work has been singularly free from the pedagogical quality. He was one of the few Germans of recent years who put into their narration something of the grand style against which their contemporaries were protesting by word and by example. Yet his style could not be described as inflated or unduly elegant. He was a specialist, indeed, but one who knew how to bring his specialty into its true relations with the larger life of which it formed a part.

His choice of a subject for his life-work indicates of itself the nature of his mind and of his method. His special topic is the city of Rome. There had been already histories of later imperial Rome, histories of the Roman papacy, and histories of mediæval Italy; but Gregorovius, himself a foreigner, undertook to tell the fortunes of the Eternal City itself as it passed through the infinitely varied phases of its political and social life. To do this he had to know the history of imperial Rome, of the papacy, and of Italy, but it was his aim to subordinate all these to the record of what was going on in Rome as a community for itself. The problem was not an easy one, for Rome the city has had continually to suffer eclipse under the larger attractiveness of Rome the empire, Rome the papal seat, and Rome the Italian state. To resist the temptation to wander off into all these congenial fields required extraordinary scholarly character, and a sense of proportion quite unusual among "scientific" historians. That Gregorovius on the whole successfully resisted this temptation will perhaps prove to be his chief title to fame. One strong hold upon the main clue of his narrative was given him by his great interest in questions of topography and in all matters relating to the outward forms of civic life. He introduces each of the greater epochs into which his narrative is divided by a careful study of the extent of the city as shown by contemporary records, and gives also as complete an account of the principal buildings, monuments, and other works of art as can be gained from writers of the time. By putting together these introductory chapters one would have a continuous description of Roman topography from the fifth to the sixteenth century.

Again, it is a special feature of Gregorovius's work that he tries to reconstruct for us the forms of the Roman municipal administration and to set this in its right relation to the superimposed authority, now of the Roman empire, now of the papacy, and again from time to time of the German kings. This problem is indeed a desperate one, and it is not the least of the author's merits that when his clue is lost, he does not hesitate to say so. For long periods—during, for example, the tenth and eleventh centuries—the precise nature of the government in Rome is only to be guessed at. Names of officials appear in plenty, but these are generally little more than reminiscences of a mighty past. "Senator," "consul," "prefect," "patricius" are all familiar words, but the things they stand for differ by a whole world of political distinctions from the things they had represented in the days of Cicero. Occasionally such a word as "senatrix" betrays the vastness of the revolution that has taken place. One feels in reading Gregorovius that there are great gaps in our knowledge of these matters, but also that the historian himself is aware of the gaps and is not disposed to fill them by arbitrary combination. Rather one traces under his guidance how political forms, clear at one moment, are obscured in the next only to come out again in some new turn of affairs into renewed though ever varying life.

The two volumes before us deal with a period in some respects the most confused of the whole Roman history—that of the Germanic invasions and the rise of the papal power to the coronation of Charlemagne. In spite of the narrow limits of space, it is doubtful whether any better guide through this tangle has ever been written. The continued emphasis upon Rome as the central point of all this vast activity keeps the balance between the various warring interests, and holds our attention steadily to the meaning of the whole social movement. Gregorovius had this great advantage over Gibbon, that his gaze was forward rather than backward. He does not leave us, as Gibbon does, with a sense of decaying life, but rather of new constructive forces, which are building up by slow and often unseen processes the framework of a new civilization.

It is, therefore, a matter of congratulation that we are to have access to this really great work in our own tongue. The only regrettable thing about the translation is that it could not have been made by some one who was at once a scholar and familiar with the German language. It is the same old story of translation by one who knows German after a fashion, but whose knowledge gives out at just those critical points where the serious reader has a right to expect accuracy. Opening the first volume at random at page 276, we find "thus early," instead of "very early"; "after him," instead of "together with him"; "the Basilicas of Julius, of Calixtus, or Caius," for "the Basilicas of Julius (or Calixtus) and of Caius"; "great" for "greater"; "more numerous still," for "numerous, further"—all these slips occurring in one paragraph, and most of them distinctly changing the sense of the original. On page 281 we find "in each of which [churches] the seven cardinals read mass one day in the week," instead of, as in the original, in "each of which seven cardinals read mass in turn; each one day in the week." The standing crime of all translators, to leave out passages which they do not understand, is committed here, one may say, in moderation; and in general, where the course of the narrative is direct and only familiar matters are treated, the translation is smooth and accurate enough. The translator's lot is not an easy one at best; we may well be grateful that so devoted an admirer of her author has undertaken the present work.

Essays and Lectures relating to the Modern English Stage. By Henry Arthur Jones. Macmillan & Co. 1895.

THE collection of essays and lectures concerning the English theatre written during the last twelve years by Henry Arthur Jones and now published under the somewhat misleading title of 'The Renascence of the English Drama,' first demonstrates the danger of prophecy, the author confessing that the earlier papers would never have been written if he could have foreseen what was going to happen, and, secondly, affords incidentally a most naïve revelation of Mr. Jones's estimate of himself as a dramatist, it being quite plain that his rosy ideas about the present and impending development of theatrical literature and art are due to the success of his own plays. Expressed briefly, his contention would read something like this: Ten or fifteen years ago no play treating life sincerely would have been tolerated upon the English stage; my plays treat life sincerely; they prosper, and, therefore, the English drama is in a condition of renascence.

The egotism that pervades the book is amusing and harmless, but it is impossible, in reading Mr. Jones's views of contemporary plays, players, playwrights, and managers, to help wishing that, in writing his own pieces, he had observed a little more faithfully the admirable principles which he preaches. His plays, however, whose merits and defects are alike conspicuous, are not just now the subject of consideration. His remarks on the theatre, its relations to literature, art, education, religion, morals, etc., exhibit, as might be expected, a wide familiarity with his topic, and are for the most part sound enough, if rather trite; but his fluency and enthusiasm betray him occasionally into exaggerations and contradictions. His pretension, for instance, that the dramatist has the right to portray "all aspects of human life, all passions," with "the freedom of phrase, the freedom of treatment, that are allowed to the

Bible and to Shakspere," is certainly open to dispute. If the modern dramatist had the right, he certainly would not have the discretion. The experience of the last few years is a sufficient indication of the use he would be likely to make of any additional license extended to him. In another place Mr. Jones says that the four chief qualities that any work of art, be it a play, poem, or picture, can possess, are beauty, mystery, passion, and imagination —a dictum which apparently delegates truth to the fifth if not a still lower place. He then proceeds to remark that the one virtue of realism is truthfulness, whereas elsewhere he argues, and argues rightly, that realism, as it is commonly understood to-day—the exact representation of some particular fact—is not true at all in the broad sense of the word.

In speaking of the ordinary modern manager, or, as he ought to be called, speculator, Mr. Jones denounces vehemently and justly "the detestable doctrine that a manager is obliged to choke the public with whatever garbage it relishes for the moment"; but in ascribing the evil to the spirit of "managerial shopkeeping" he fails to go to the root of the trouble, which is the utter ignorance and vulgarity of the vast majority of the men in present control of the theatrical business. There is not one in twenty, perhaps not one in fifty, of these persons who would be capable of knowing a good play if he should happen to see one. Most of them have not brains enough to recognize the truth of the elementary shopkeeping rule that the tradesman who gives the best service to his customers is the most likely to have a good business. Whatever improvement may be discernible in the literary and dramatic quality of recent theatrical entertainment is due chiefly to less than a dozen men, sufficiently well educated to be able to appreciate the merits of plays submitted to them by hitherto unknown authors, and shrewd enough to realize the fact that the best of everything is none too good for their patrons. At the head of them stands Sir Henry Irving, in whom business ability, artistic instinct, and histrionic power are combined in an extraordinary manner.

Of course managers, even of the best type, are powerless to produce good new plays if no good new plays are written. Mr. Jones complains that in the English theatre there is a certain "law of repression, of restraint, of gentle, but irresistible, suasion towards small, foolish, cockney ideals," and that therefore an author must make it his first business "to remove everything that can possibly offend the most untrained cockney intellect." This is true, doubtless, of the hack-writer who is scribbling solely for a market, the compounder of modern melodramas and farcical comedies, but it certainly is not the case with playwrights whose ambitions aim at something higher and more lasting than mere pecuniary success. It is not in the least degree probable that any great play will ever be written by a man chiefly anxious about the receipts in the box-office and his royalties. It is the man who is indifferent to every consideration save that of good workmanship who is most likely to reap both fame and reward. In this last category, of course, Mr. Jones wishes to be numbered, but, up to date, he has fallen far short of the standard by which he would wish other writers to be judged, and his latest production, "The Triumph of the Philistines," is reported to exhibit more symptoms of decline than of advancement.

His poor opinion of some of his contemporaries is expressed somewhat too openly, but his criticism of the drama of realism and heredity is vigorous and acute, and he is undoubtedly right in his contention that plays written in precise imitation of actual life are the least dramatic and the least illustrative of life as a whole. There was a time when Mr. Harrigan's transcripts of tenement-house scenes were acclaimed as masterpieces, but that delusion, happily, has been dissipated. Mr. Jones professes to believe that religion, politics, science, education, and philosophy are all likely to be dealt with on the English stage during the next generation. It would be interesting to know upon what grounds this faith is founded, unless, indeed, the reference is to contemplated productions of his own. No other prominent dramatist betrays any disposition to treat these subjects. There are signs, however, of a coming reaction from mere frivolity, on the one hand, and feverish and unclean passion on the other, and the improvement in literary style is indisputable.

Mr. Jones is not a good critic, or a safe guide, but he is an entertaining writer and at times a forcible one, when he avoids the excessive use of cumulative adjectives, which is his besetting literary sin.

The Colonization of Indo-China. Translated from the French of J. Chailly Bert, by Arthur Baring Brabant. London: Constable. 1894.

THE chief fault that we find with the above work lies in the title, which is incorrect and misleading for a book that is an account of only Hong Kong and Burma. As we understand it, the French title, 'La Colonisation de l'Indo-Chine,' though not very clear, is meant to imply that this study of the experience and ways of the British in similar possessions will be useful to Frenchmen in teaching them what to do with their own acquisition, Indo-China. In the translation meant for English readers, the idea is necessarily lost. Then, too, colonization to the Anglo-Saxon mind implies the sending out of settlers as to Australia or Canada, and not merely an establishment of officials plus a few planters and merchants. The French term *colonisation* here can mean only government and settlement like that of India. While we are speaking of the translation, we may say that in the main it is smooth, readable, and fairly idiomatic. In the last sentence of page 322, however, by rendering *que* "that" instead of "whether," the translator has given us the opposite of the meaning of the text.

M. Chailly Bert's volume presents us with an excellent study of Hong Kong and Burma, including a sketch of their history and development, the difficulties the English had to encounter, the means by which they overcame those difficulties, the manner in which the Government is carried on, as well as of the economic and other conditions of these two portions of the empire. His tone is appreciative and generally laudatory, though he has no hesitation in making criticisms when they seem called for. Throughout he makes us feel his competence. There is something French in his tendency to lay down rules and to generalize. We give two examples:

"When we consider what are the elements indispensable to the prosperity of colonies, we shall find that they are three in number, namely: good colonists, good laws, and good administrators. A good colonist is a married or marriageable man, who is robust and healthy, full of energy and enterprise, gifted with patience, and possessed of some capital. Good laws are laws which are unpretentious, liberal in their spirit, pliant in their wording, not overloaded with regulations, which do not try to provide for every emergency, and which tend neither to hamper the action of the colonists nor to restrict the responsibility of their rulers. Lastly, good administrators are such as have broad-minded ideas and aim high; are gifted with a comprehensive intelligence and right judgment; are jealous of nothing but the welfare of both settlers and the colony, and interpret the laws (also, if need be, amplifying them) in such a manner as to render them a power and not a constraint to the community" (p. xvi).

"Founding a colony is like building a house. From the very first, great activity prevails. Capital is accumulated; workmen and materials arrive in constant succession; the owners appear in rotation to inspect, supervise, and hurry on the workmen. The building emerges from the ground, the stories rise one above the other; ere long the flag flies from the housetop. And now the building only awaits tenants. If tenants are not forthcoming, the public which had admired the work from the first and envied its promoters, at once turns round and, instead of anticipating its success, now prophesies its failure. Henceforth every room, even to the topmost garret, must be let before the public can be brought back to its former opinion, and even then the public will always view it with a certain amount of distrust" (p. 52).

We close with a quotation from "a high official in the India Office"; it is worth meditating on in more countries than one: "I attribute the success which I claim for the Indian civil service in modern times chiefly to the fact that it is the best-paid service in the world."

The Life of Marguerite d'Angoulême, Queen of Navarre, etc., sister of Francis I., etc., and author of the Heptameron, etc. By Martha Walker Freer. 2 vols. Cleveland: The Burrows Brothers Co. 1895.

THIS was an estimable book when it was first published, forty-one years ago, but it is not an estimable act on the part of its present publishers to reprint it now with no indication within the four covers that it is an old book. And an old book on this subject is, *ipso facto*, comparatively worthless. The interesting personality of Marguerite has been studied and restudied by writers of the last generation in France with zealous skill and patience, and the editors of her works, Felix Frank, Leroux de Lincy, Paul Lacroix, M. de la Ferrière, in their introductions and comments have accumulated a mass of information which in turn has been critically examined and discussed by MM. Louis de Loménie, Ch. d'Héricault, Anatole France, Littré, Paulin Paris, A. de Ruble, and A. de Montaiglon. Latest of all, Mme. d'Haussonville has published a Life of Marguerite. In Germany Herr Lotheisen has written a volume about her, and in America a short Life of her by Miss A. M. F. Robinson is in the "Famous Women" series.

It is, therefore, somewhat misleading to be told in this undated preface that "a Life of Marguerite . . . is now for the first time offered to the public." It is still true that no other Life of as large dimensions exists; but also no other Life contains as many mistakes—not careless mistakes of fact, but careful mistakes of opinion. They are mistakes to be forgiven a student of the subject in 1854, but which should not be promulgated now. This is especially the case regarding Miss Freer's views of Margaret's relation to the Reformation. It is known to every one now that it is a mistake to think of Margaret as "one of the earliest converts of the Reformed Church," and as suffering persecution for her beliefs. But there were qualities of Margaret's character and conditions of her

times which made possible this erroneous conception of her position. She was by nature distinctively a helper of her fellow-beings. Her singular self-effacement made her a woman at the door of whose heart no one ever knocked in vain. She was an ardent *giver*. From her gay youth to her saddened age, to all comers she gave, with an indescribable readiness and liberality, her affections, her sympathies, her strenuous efforts, her tender consolations. She had something of George Sand's large heartedness, and much, too, that resembled George Sand's chameleon-like tendency to reflect unconsciously the opinions of her friends. In reading Margaret's letters one no more needs to look at the address than at the signature. Every line reveals to whom she is writing, not merely by the subjects touched upon, but because the subjects are always seen from the point of view of the person Margaret is thinking of and feeling for—with whom, strictly, she is in "correspondence."

As illustrating various forms of her benevolence and beneficence there may be brought together some sentences from three different letters, not to be found in any one volume, but written within a few weeks of one another. In December, 1526, she returned to France after her visit of four months to the King, her brother, a prisoner in Spain; a visit to which she was impelled by her intense anxieties as a sister, but which was made possible only by her accepting the heavy burden of ambassadorial duties regarding public affairs. She had found Francis dying, in prison; she left him well and almost at liberty through her ministrations. And she writes, as one who has been immersed in state affairs, to her "chancellor," Jean de Brinon: "Je vous puis dire que j'ai eu affaire aux plus grans dissimuleurs et gens où il se trouve aussy peu d'honneur qu'il est possible." The next month she writes to her brother as the nurse of his five little motherless children, and tells him how they have all had the measles, but "now they are all entirely cured and well; and M. le Dauphin [eight years old] does wonders in the way of study, mingling with his schooling a hundred thousand other matters; and there's no more question of temper, but of every virtue. M. d'Orléans [four years old] is nailed to his book, and says that he wants to be wise; but M. d'Angoulesme [seven years old, later Henri II.] knows more than the others, and does such things, more like inspirations than childishnesses, that, monseigneur, you would be astonished at them. Little Margot [three years old, afterwards Duchess of Savoy] resembles me in not choosing to be ill. But every one says she is very charming, and is becoming much more beautiful than ever Mlle. d'Angoulesme was [that is, Marguerite herself]." Closing her letter, she assures the King that "nothing will seem to her trifling, nor difficult, nor scarcely impossible, in which she can in any way be of service to him." A few weeks later she writes to Montmorenci, "grand maître de France," to thank him for the pleasure he has given her about "le pouvre Berquin" (Louis de Berquin, a man of high character and position, who was found guilty of Lutheranism, and three years later than this letter was burned for his opinions). Marguerite speaks of what Montmorenci has done for "poor Berquin, which I feel as much about as if it were done to myself, and so I can say to you that you have drawn *me* out of prison."

State affairs, sick children, heretic prisoners—every moment something in which she is *serviceable*. "Rien n'estimera petit, penible, ny à peine impossible ou pensera vous servir de quelque chose." That was the natural pulsing of her heart. And to whom could she be more serviceable, who more needed kindness, than "the heretics"? It is unquestionable that Marguerite was interested by their tone of thought, equally unquestionable that she never felt herself to be one of them; most unquestionable of all that whatever they suffered it was to her as if she suffered it herself. This generous intensity of sympathy, this devotion not to a cause, but to the representatives of a cause, is so rare a quality that no wonder it has been interpreted to mean that which it did not mean.

To return for a moment to the present publication. As has been said, there is no indication in these volumes that it is not a new work. But in a prospectus previously issued the publishers announced, while giving no single date, that this reprint was from the second edition of the book, that edition being chosen by them because it contained "many important additions and corrections by the author." The present reviewer has a copy of the first edition (Hurst & Blackett, 1854). On comparing, paragraph by paragraph, eighty pages of different parts of it with the reprint, there has been found *no* "correction," save of "providentially" for "mercifully" (ii. 13), and *no* "addition." On the contrary, there are constant *omissions*, and often of important passages, varying from a few lines to several pages in length; and these passages are simply *dropped out*, no accommodation of the text being made, so that strange incoherencies are caused, producing misstatements which it would have been impossible for the author herself to make. The amount of the omissions can be calculated by the number of pages of the two editions, which include twenty-five pages of valuable appendices. Estimating accurately that ten pages of the reprint count for eleven pages of the original, it is clear that about one-third of the whole work is lacking.

The index, on the value of which the prospectus lays stress, has been made by an incompetent hand, and scarcely balances the omission of the half-page or more of headings to each chapter. (It may be said, by the way, that the omission of those, some twenty pages in all, was carefully *not* counted in the estimate just given of the sum of omissions *in the text*.) The absence of any table of contents is regrettable, all the more as it might so easily have been printed from these headings.

Another result of this most careless editing, or rather no editing at all, is an absurd condition of things about the illustrations. The arrangement of the three illustrations has been changed, while no corresponding change has been made in the text describing them; as there is no list of illustrations, it is perhaps not immediately perceived that the portrait which on page 356 of the second volume is said to be in the middle of the first volume, is really the frontispiece of the second, while the picture spoken of on page 357 as the frontispiece of that second volume, is really in the middle of the first volume. The positions of these two engravings have been just exchanged.

Herbart and the Herbartians. By Charles De Garmo. Scribners. 1895.

THIS volume is entirely occupied with the relations of Herbart and his followers to teaching, and furnishes a good deal of welcome information about Ziller, Stoy, Rein, Karl Lange, Frick, and others, their work and their doctrines. The philosophical part is excessively general and sketchy, and though a hundred pages are given to Herbart, there is no exposition of his system, nor anything on which any beginning of an opinion of the merits of his theories could be built. The Herbartians in this country have founded a club, which seems to be designed for a propaganda, not to say a party. There are those who think this one of the many indications of over-positiveness in the Herbartians. Herbart himself was very absolute in his opinions; but there was this half-excuse for him, that he conceived them to be rigorously demonstrated. The best of his followers, being quite alive to the strides that have been made in logic since Herbart's time, no longer insist upon the metaphysical proofs he offered, and it would therefore become them to temper the boldness of their master's conclusions.

The *apperception* which Herbartians always have on their tongues is nothing in the world but another development of the idea familiar to us of English culture under the name of the association of ideas; and many of the Herbartian applications of apperception to teaching might have been borrowed from Hartley. Hartley's 'Observations on Man' was published in 1749, while Herbart's writings were all in our century. It would have been a shame if the later development of the idea had shown no improvement on the earlier. That the theory of teaching should be based upon the law of association of ideas, in a generalized form, and upon the law of fatigue, is evident, if those are recognized as the sole laws of mental action. (Do not the heavy tomes of some of the modern Herbartians sometimes leave the second law out of sight?) To that extent every student of pedagogy must be a Herbartian. But when they assume that, in order to make "apperception" the sole law of mind, it is necessary to sweep away all entitative faculties, they fail to carry with them those teachers who believe in the guidance of ordinary good sense. One might as well say that the law of mechanics, being the autocrat of the physical universe, requires the denial of all special forces. Human faculties may be supposed to have originated through the action of association, but there is not the slightest necessity of denying that human powers are, in fact, specialized.

Another idea upon which the propaganda of the Herbartians is designed to wage war is the gymnastic conception of education. Dr. De Garmo sneers at "our favorite doctrine of mental discipline." "This conception assumes, first, that the mind can be well trained with a minimum of concrete knowledge; and, second, that the power gained in one department of knowledge may be transferred to any other." This is certainly the favorite doctrine of our teachers; is it not also a good description of the principles upon which modern physical science has been built up? Namely, physicists have made mathematics the basis of their work, which is "training their minds with the minimum of concrete knowledge." They have learned their mathematics by working fictitious examples, because they hold that the power so gained may be transferred to any other problem. In fact, the whole progress of physics is due to applying to one department the training gained in studying another. It will be, we guess, vain to try to persuade our teachers that this principle is not a sound one in the main. There is no part of instruction in which the Herbartians are weaker than exact science. Dr. Frick's course for a gymnasium, taking the boy at ten years of age and dismissing him at nineteen, includes no mathematics whatever, and teaches physics, as well

as the brief account in this volume enables us to judge, in the absurdest manner. The Herbartian books upon geometry betray a total ignorance of the subject, as it appears to a modern mathematician. The truth is, the only way the exact sciences have ever been successfully taught is by the despised method of "mental discipline."

Abandoning, as the Herbartians do, the theory of mental discipline, it is no wonder they have been greatly puzzled how they should unify instruction. For what they call the "core" of instruction for children, Ziller and others have adopted fairy tales, a cruelly mutilated Robinson Crusoe, and so forth. This seems a poor substitute for our "Rollo books" and their like, which are based on the principle of training the powers.

The Herbartians carry to great lengths the embryological theory of learning, according to which the individual student of a science must reproduce in his own course of thinking all the mental operations which in history have brought that science to its present state. This is more true of some subjects than of others. When Dr. De Garmo tells us that "if a man would advance in art, he must master its past to start with," and mentions improvements in the dynamo as an instance of what he means, he has experience all against him. American inventors should, in that case, be singularly unsuccessful, for their method is to make themselves thoroughly acquainted with the present state of the art, so as to know exactly where the shoe pinches, and to collect from various quarters (generally by applying training gained in one department to another) suggestions which may be applicable to improvements. As in other cases, the Herbartian notion has much merit, but it is pushed too far, regardless of the protests of good sense and of experience.

Essays and Addresses, Religious, Literary, and Social. By Phillips Brooks. Edited by the Rev. John Cotton Brooks. E. P. Dutton & Co. 1894.

After Dinner and Other Speeches. By John D. Long. Boston: Houghton, Mifflin & Company. 1895.

Commemorative Addresses. By Parke Godwin. Harper & Brothers. 1895.

Orations and Arguments by English and American Statesmen. Edited by Cornelius Beach Bradley. Boston: Allyn & Bacon. 1895.

Of the first of these books it would suffice, upon many accounts, to say the least. Mr. Brooks is still a living power, and these addresses contain nothing, in quality, that is new to those who were familiar with his utterances. They breathe throughout the same robust, kindly, and earnest spirit, and this keeps them at the same uniform level of excellence. There is a sentence at the very beginning of the first of these addresses that is so characteristic of the manner in which Mr. Brooks developed a theme as to deserve to be quoted. It reads:

"How when we once get within the sphere of a great truth we find all mental life seeking its centre in it—thought and fancy, energy and faith, hope, fear, and speculation, all hurrying to the forum where their business is to be done and their fate decided. It is just as, when we come near a great city, we see life becoming more and more centralized every mile; the scattered interests and pleasures and pursuits of village life begin to look city-ward; the great roads begin to run in long straight lines on to the distant centre; the little lanes creep on between their hedges striving the same way; houses begin to take the city look; men are working for city needs with an eye to the demands of city taste or necessity, and each new-comer falls into the great stream and is carried on to the market-place with the rest."

Hardly any passage, we think, could better explain and illustrate to those denied the privilege of hearing and seeing this great preacher the synthetic, unifying power of his mind. When he took up a subject, all his "thought and fancy, energy and faith, hope and fear," seemed literally to be hurrying to the forum. Nothing can supply or suggest the kindling fire of his face or the swelling rush of his voice, but the words which we have selected come as near, perhaps, as any words could to indicate his manner and spirit when speaking.

Ex-Gov. Long's speeches have a different value. They are of a decorous and respectable character, possessing no distinguishable literary quality for the most part, and suggesting no marked individuality in the author. Yet, as he modestly says, they may have value as a partial reflection of the public sentiment, and of the topics and occasions, of a generation in Massachusetts which is now more past than present. The occasions vary from Forefathers' Day at Plymouth to the meeting of the National Association of Druggists, the heroes from Daniel Webster to Gen. Logan. The speeches in many instances have a local interest from their dedicatory character; and all of them have the merit appreciated by the old Scotch woman who thanked the Lord for the Psalms because they were short.

Much more ambitious are Mr. Parke Godwin's addresses. They commemorate G. W. Curtis, Kossuth, Edwin Booth, Audubon, and Bryant. With all of these men Mr. Godwin had the advantage of an intimate and, with most of them, a prolonged acquaintance. On this account these addresses have a certain historical value, sufficient at least to justify their preservation. They are, however, a good deal overwrought, and contain much fustian. But it is given to few to compose commemorative orations without yielding to the temptation to introduce a little fine writing, and Mr. Godwin's "purple patches" may be passed over by the judicious reader in view of the substantial merits of his matter. We incline to give the preference to the accounts of Curtis and Audubon, which are set in a somewhat lower key than the others.

Mr. Bradley's compilation hardly falls into the same category as the others on our list, but it is undeniable that its contents are of a superior order, consisting of some of the most notable speeches of such men as Burke, Chatham, Macaulay, Webster, Calhoun, and Seward. The speeches are intended for systematic study, and a number of notes explain phrases and allusions the meaning of which may not be clear to the ordinary reader, and concerning which elucidation may be convenient even for the scholarly.

Life in Ancient Egypt. Described by Adolf Erman. Translated by H. M. Tirard. Macmillan. 1894. 8vo. Pp. xii, 570. $6.00.

Although this volume is a translation, it is worthy of more than a passing notice. It originally appeared in German some seven or eight years ago, and is now published in English in a form closely corresponding to the original. The author, doubtless, might have added some details to his description, since recent discoveries have increased our fund of knowledge, but these additions would have supplemented the sketch by only a few lines without changing it in its essential features. The work of the translator has been well done, and the criticisms that one might pass upon it would affect only some minor details. Occasionally a genial or characteristic phrase of the author has been obscured, but the translation reads well and gives a clear notion of what was intended. The function of the publisher and printer has been discharged with credit. The type is clear, the paper is good, and the illustrations, reproduced from the original apparently without addition or subtraction, are sufficient for their purpose and admirably selected.

The book was prepared to fill a gap in the German literature of the subject, but it serves the same purpose in English as well. The work of Wilkinson is antiquated, and a large part of its value to-day lies in its pictures and its notes, the latter being the work of subsequent editors. There is an abundance of material in the works of Maspero, Edwards, Budge, and others, but it is scattered and hard to come by. Here the field has been covered by a competent hand, and the whole has been cast in a shape dictated by eminent knowledge of the subject from the vantage-ground of what the inscriptions tell as well as what the pictures show. Furthermore, the author treats his subject in an historical manner, tracing the changes which occurred in the course of the history. Perhaps the most striking instance of the variations wrought by time is to be seen in the matter of clothing and hair-dressing, but the changes here are merely symptomatic of a wide divergence in all departments between the early and later times. It is passing strange that such a man as Renouf should declare that even the Egyptian religion was stagnant and not subject to evolution and change. Such is nowhere else the case, and it is not the case even in conservative Egypt. Of course, changes were not as rapid in the period under review as now, but nevertheless change there was, and Prof. Erman brings out the fact in indisputable fashion.

The period of which Erman treats is that which began when the earliest monuments were erected, and ended with the time of the greatest extension of the kingdom under the nineteenth dynasty. It thus constitutes the more properly and purely Egyptian period. The matters passed under review relate to the private and public life of Egyptians of various grades, their arts, occupations, recreations, science, trade, war, and a variety of topics too numerous for mention. The material used in the delineation is drawn from native sources in monument, picture, and papyrus, and the whole range of sources has been laid under contribution by one eminently competent for his task by reason of knowledge and sympathy.

In closing, a word may be said regarding the author. He is the successor of Lepsius as "professor ordinarius" in the philosophical faculty of the University of Berlin and as head curator of the department of Oriental antiquities in the Royal Museum. Having given us the only two scientific grammars of the Egyptian language in its main periods which we possess, he has earned the distinction accorded to him by Maspero of being founder and head of the German "grammatical school of Egyptology." He is a man of enthusiasm and of keen insight, a minute scholar and a critic well qualified in all respects of knowledge and judgment. His pupils are enthusiastic admirers, and his work is of a solid and enduring sort.

BOOKS OF THE WEEK.

After To-morrow. Merriam Co. 40 cents.
Altieri, Princess Olga Cantacuzène. My Indian Summer. London: A. & C. Black; New York: Macmillan. $1.25.
Anderson, William. Japanese Wood Engravings. [The *Portfolio*, May, 1895.] Macmillan.
Bailey, L. H. The Horticulturist's Rule-Book. 3d ed. Macmillan. 75 cents.
Berkeley, Charles de. Instinct du Cœur. Paris: Colin & Cie.
Bierstadt, O. A. The Library of Robert Hoe: A Contribution to the History of Bibliophilism in America. Duprat & Co.
Blatchford, Robert. Merrie England: A Plain Exposition of Socialism. Commonwealth Co. 10 cents.
Block, L. J. The New World, with Other Verse. Putnams. $1.50.
Chapman, F. M. Handbook of Birds of Eastern North America. Appletons.
Dudley, Bicknell. A Gentleman from Gascony. Street & Smith. 50 cents.
Every Day's News. [Incognito Library.] Putnams. 50 cents.
Farmer, Lydia H. Aunt Belindy's Points of View. Merriam Co. 75 cents.
Fenn, G. M. Witness to the Deed. Cassell. 50 cents.
Ferry, Jules. Discours et Opinions. Tome III. Paris: A. Colin & Cie.

The Nation.

NEW YORK, THURSDAY, JUNE 6, 1895.

The Week.

THE Republicans of Ohio met in State convention on Wednesday week, and adopted a platform on the money question which, while it might have been better, must be considered safe. It reads as follows:

"We favor bimetallism, and demand the use of both gold and silver as standard money, either in accordance with a ratio to be fixed by an international agreement, if that can be obtained, or under such restrictions and such provisions to be determined by legislation as will secure the maintenance of the parity of values of the two metals; that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal."

It is easy to call this a straddle, but when we consider the present pretensions of the silverites and their ultimatum, which is "free coinage or nothing"—meaning free coinage at 16 to 1 by the independent action of the United States—the Ohio resolution distinctly negatives that proposition. Nobody is in favor of a return to the old policy of buying silver bullion and coining dollars on Government account. Even the Populists have abandoned that. Therefore the proposition of the Ohio platform to maintain parity under all circumstances is what the existing law promises, and what everybody except the 16-to-1 silverites is in favor of. Senator Sherman's speech at this convention was, in its practical aspects, a sound deliverance. It contained just enough unsoundness to make it palatable to those who do not understand the subject very well, but not enough to offend the elect or to disturb business. The nomination of McKinley for the Presidency next year has the ring of base metal, since it does not mention the McKinley tariff among his claims to distinction. Indeed, the only mention of the tariff in an unusually long platform is embraced in a few lines of general endorsement of the principle of protection, and a condemnation of the free-wool provision of the present tariff.

Gov. McKinley thinks it indelicate for him to say anything about the Ohio platform, inasmuch as it contains an endorsement of his willing self for the Presidency. He need have no scruples on that account. Of all left-handed compliments, this of declaring that a man is Ohio's favorite son, and then turning round and demonstrating that he has no influence in a State convention of his own party, is a little the worst. Foraker ran things with a high hand, and ruthlessly "turned down" every one of McKinley's candidates for a place on the State ticket. Then, with a wink as it were, he passed over the desired endorsement to the Governor upon whom he had just trampled. He is quite capable, a year from now, of repeating the endorsement and then choosing delegates to the national convention who will not vote for McKinley even on the first ballot. Meanwhile, there is the long and unbroken tradition staring the Ohio Republicans in the face, that they always lose the State in the year when a colleague for Senator Sherman is to be elected by the Legislature.

Visiting statesmen with Presidential aspirations who have been in town for the past few days, are leaving us one by one, somewhat overcome by the heat. So far as known, no one of them has betrayed his convictions on the silver question, or has failed to treat Tom Platt with the high respect due to his position as boss of New York. We have not been able to discover which of the candidates has profited most by his visit. It is said of Gen. Harrison that he has borne the heat better than the others, but there has been nothing to show that his presence here has aroused any fervor in Republican breasts. So far as enthusiasm for him as the candidate for 1896 is concerned, there are no signs of its existence in these parts at present. The same thing may be said of Napoleon McKinley. He came and went without visible commotion among the people. It is possible that both Harrison and McKinley would have received more encouragement for their booms if they had not so studiously concealed their convictions on the only great and pressing issue of the day, but nobody who has followed their careers can expect them to realize such a possibility. Both men have dodged and trimmed on the silver question so persistently that their personal followers do not know where they stand, and they will continue to dodge and trim to the last, entirely unconscious of the fact that the intelligence and property of the whole country are now eagerly looking for a candidate who has convictions on the subject and is not afraid to avow them.

"Tom Reed of Maine" has not lately been getting himself so unconsciously and innocently before the public gaze as have some of his rivals for the Republican nomination for the Presidency, but a biographical sketch of him in the last number of *Home and Country* has an ominous campaign look. From it we learn that Mr. Reed is now the most interesting figure in public life. This is said without intending disparagement of Harrison, McKinley, or Allison, who "are all in their way remarkable men," but the writer, as a friend of truth, cannot refrain from pointing out that "none of them possess the interest which Mr. Reed commands." This appears to lie partly in his height and "generous figure," partly in the shape of his head. The similarity of that dome of thought to Shakspere's has, as the friendly biographer observes, been often noted, but he asserts that he is the first to point out its "still more striking resemblance to Li Hung Chang." This seems to make it hopeless for any of Mr. Reed's rivals to angle for either the literary vote or the Chinese vote. But his main title to admiration is his resolute and independent character. "He never falters before new conditions or trifles with responsibility." We infer, therefore, that it must have been some other Reed whom the Populists chased into the cloakrooms in the last Congress when they tried to find out what he really thought about silver, and whom his honest-money friends in the East have in vain besought to pull his Sino-Shaksperian head out of the sand.

The return of Mr. William C. Whitney from Europe was announced in the morning papers, together with his views on the subject of bimetallism. Mr. Whitney is in favor of it, *i. e.*, the international kind. Most people who have taken only a superficial view of the subject are. Mr. Arthur James Balfour, whom Mr. Whitney quotes, is in this callow stage. When he and Mr. Whitney think a little harder, they will either be opposed to bimetallism in any shape, or in favor of it by separate action of each country. Don Cameron, who is perhaps the hardest thinker in this country, with one or two exceptions, has reached the last-mentioned stage, and that is the reason why the sound-money men of Philadelphia have formed an organization to elevate him out of the Senate. Such profundity as Cameron's ought not to be restricted to that narrow field. He ought to be on the lecture platform or in training for the Presidency. Mr. Whitney thinks that England is ripening for bimetallism. It was seventeen years ago that she sent delegates to the conference of 1878, and we were told then that she had begun to turn. She has been ripening ever since, with such steadiness that Sir William Harcourt said the other day that if a new conference should be held, the Government would not allow the gold standard for England even to be drawn into dispute; while the Liberal Unionists, of whom Mr. Chamberlain is the leader, said that they would under no circumstances remain in alliance with Mr. Balfour if bimetallism were a part of the Conservative programme. Mr. Whitney is still a young man, but he will not live long enough to see that peach fall.

The publication of Mr. Whitney's views on the subject of bimetallism has had an awakening effect on David B. Hill. "Free bimetallic coinage" has been among his patent rights for a long

time, although he would not tell what that meant, and nobody else could. It might mean international agreement or separate action. Mr. Whitney's move for international agreement has torn Mr. Hill's secret from him. He says he means the same thing. But he means more. Whitney did not tell what ratio he favored. Hill does. He goes for 15½ to 1. Presumably Whitney is for 16 to 1, that being the ticket of 'Coin's Financial School.' But Hill knows that the noble army of debtors will be in favor of 15½ as soon as they find out what it means. The reason why Hill favors 15½ is that he does not approve of two ratios at the same time—a ratio of 16 for the silver dollar and a lower ratio for the halves, quarters, and dimes. He would have it all one thing or all the other. This conception furnishes a new bone for Democratic conventions to puzzle and wrangle over. We shall not undertake to say what they will make of it or do with it. Having done so much for the debtor class, Mr. Hill does not forget that there is another side. "I would exterminate for ever," he says, "the greenback dollars which, by the endless redemption chain, make the chiefest of our existing currency woes." This is a check to Whitney that may prove to be a checkmate unless he bestirs himself.

Signs multiply that the free-coinage craze is dying out in each party. The action of the Republican League of Colorado in voting down a resolution declaring that the members would not vote in 1896 with any party which did not unequivocally declare for unlimited coinage at 16 to 1, is followed by equally significant developments among the Democrats. The Kansas Democratic State central committee, which had been convened with the expectation that it would issue a free-coinage address, rejected the scheme when the resolution was brought to a vote; and the Texas Democratic executive committee, which was counted upon to follow the example of the Illinois brethren in precipitating a free-coinage deliverance a year before the Presidential campaign, instead adopted resolutions to "defer expressions on the financial question to primaries to be held prior to the State convention of 1896"—unless the people "clamor" for an earlier expression of opinion. Evidently the politicians in both parties are fast learning that they have grossly exaggerated the extent of the "clamor" for free coinage among the people.

The Artful Dodger who produced 'Coin's Financial School' has an article entitled the "Free Silver Argument" in the June *Forum*, the object of which is to show that Congress in 1792, although it established bimetallism, made silver the unit of value. In other words, it said that two separate and distinct things should be equally valid as money or legal-tender, but that only one of them should be such. This is worthy of the Artful, and the way he proves it is characteristic. He goes back to the Congress of the Confederation, which confessedly did make the silver dollar the unit of value, and brings out a lot of papers connected with that event, mentioning a paper of Thomas Jefferson's, a report of the Grand committee on the money unit, and a paper submitted by the Board of Treasury to Congress in 1786, and the resolutions on coinage of August 8, 1786. All these things are anterior to the adoption of the Constitution and have nothing to do with the matter in dispute. Everybody knows that the Spanish silver dollar was the unit of value prior to the law of 1792, and everybody except Harvey knows that the law of 1792 introduced a change, to wit, bimetallism. Harvey thinks, or pretends to think, that that law established both bimetallism and monometallism (for unit of value means monometallism; it has no other meaning, and never did have and never can have).

Harvey winds up with some improving comments on his own patriotism. "I would a thousand times rather do benefit to one section of my country and its people," he says, "than to be subservient to the interests of England, *whose gold is so dear*, and to get which we are giving up our property at a sacrifice and adopting a method which will bring national bankruptcy." This is the Artful all over. Observe how slyly it is hinted that gold is peculiarly an English commodity, the fact being that England does not produce a dollar of it, while we produce more than $35,000,000 per year. "The question now to be settled," he continues, "is whether we are to have an English gold policy or an American policy." He did not say an American silver policy, but that is what he meant. "An English gold policy"! What does that signify? Why not say a French gold policy, a Turkish, Portuguese, Austrian, Scandinavian, San Domingan gold policy? Chili has just adopted the gold standard. It went into effect June 1, 1895. Why not ask whether the universal Yankee nation is to have a Chilian gold policy? The only reason why the question is not put in this way is that we have hereditary prejudices against England growing out of two wars, whereas we have none against Chili, or none worth mentioning. Yet it would be much more appropriate to refer to a Chilian gold policy than an English one, because Chili is an American republic which has "gone back" on silver, although it is one of her own products. "As foreseen by Jefferson," continues Harvey, "gold, the rich man's money, is now 'cornered,' and we must go to the gold gamblers of Europe to get it." Why so, when we are producing $35,000,000 per year of it? Finally, Harvey advises his readers to send to Washington and get several ponderous documents that are out of print, among them the report of the Monetary Commission of 1876.

Secretary Gresham might have had a few rags of reputation left him had it not been for the action of the diplomatic corps at Washington in praising his "lofty and unswerving spirit of honor, justice, and conciliation." This was fatal, and we were not surprised to find the *Tribune* arguing with great power and perspicacity that Gresham's successor must not be a man of whom such damning things could be said by foreigners—that he must be "not a tool of British diplomatists, not an instrument of Russian or German or French Governments, but an American." Did anybody ever hear of foreign diplomats paying a tribute to Blaine's honor and justice? We guess not. It is only a Secretary whom they can outwit and hoodwink and use for their own base ends that they go out of their way to praise. Minister Romero had the indecency to choose the very day of Gresham's burial to speak of "his high sense of right, his love of justice, his respect for the rights of others, his courtesy towards all." Not a word here about Americanism, not a word about our country right or wrong, no devotion to the flag, no manifest destiny, no Monroe doctrine—nothing but right and honor and justice, and qualities which, as Señor Romero maliciously says, "confer honor upon humanity in general." Heaven forbid that we ever have another Secretary of State who will have anything to do with humanity in general!

At the same time with the news of the new rule for the Department of Agriculture comes the gratifying information that the Civil-Service Commission is contemplating regulations for bringing within its jurisdiction the whole force of the Government Printing-Office. The movement with this end in view originated among the employees of the printing-office themselves, and has been favorably received by the Public Printer also. This institution is the largest of its kind in the world. Under the law it is required to do all the printing and binding for the Government, and the departments and bureaus pay for the work out of the appropriations allotted for the purpose. The charges cover the cost, and private individuals may obtain copies of the publications it issues by paying an additional ten per cent. It occupies, therefore, a peculiar position, and may in one sense be called a self-supporting office, although ultimately all the payments, except those from private individuals, which are unimportant, fall upon the Government. The force varies in size, but averages upwards of 3,000 men and women. The actual salaried force is in-

significant, nine-tenths of those employed being paid by the day, or according to the amount of work they do. They comprise foremen, copy editors, revisers, proof-readers, compositors, electrotypers, folders, and all the other classes of workers found in large printing-houses and binderies. At present the Public Printer appoints to these places whomever he chooses and under whatever tests of fitness it pleases him to prescribe. Many of the positions require that men who understand their trade thoroughly should be selected, but there are besides a large number of places for which little or no especial training is necessary, and these have for a long time been used by Senators and members of Congress as lodging-places for the poorer class of place-hunters. The importunity for these petty offices is a source of incessant annoyance. When the office is under civil-service rules, this will entirely disappear, and the public printing will be conducted on a business basis, untrammelled by political considerations.

One of the most commendable vetoes sent to any Legislature by an executive for many years is that which was addressed to the Massachusetts House by Gov. Greenhalge on Monday in the case of the so-called "veterans'-preference bill." The measure virtually abolishes the civil-service system in the case of all men who ever had any connection with the Union army. Under its provisions a veteran needs only to submit his sworn statement that he is qualified to perform the duties of the position which he seeks, accompanied by certificates (unsworn) from three "citizens of good repute in the community" that they know him to be fully competent, and the appointing officer must give him the place, without the slightest evidence of his qualifications. Schemes of this sort have been advocated for years by the spoilsmen and the Grand Army machine, but they have never come near carrying until this year. The great majority which the Republicans secured in the election of last fall, gave both of these elements confidence that they could now afford to disregard the independent-minded members, whose opposition had previously blocked their efforts. The bill was accordingly brought forward, and was pushed through each branch by the most overwhelming majorities. Nobody thought for a moment of such an idea as any opposition from Gov. Greenhalge. He is a Grand Army man, he has always been a regular Republican who has not hesitated to sneer at Mugwumps, and, without having ever taken any position against civil-service reform, has not been accounted especially friendly to it. The Governor's recent vetoes of bills passed by his party putting the police of Holyoke and Woburn under State control were the first indications of an unexpected independence, but even these did not lead to any expectation that he would "go back on his comrades" by opposing the veterans' bill. The message was consequently a great surprise, and the answer to it from the legislative mob of the Governor's own partisans was the immediate passage of the bill over his veto by 172 to 23.

The bill, now awaiting Gov. Morton's action, which makes "scientific temperance education" compulsory in the public schools, seems to be generally opposed by teachers and educational associations, but to be strongly desired by the Women's Christian Temperance Union and various church organizations. As such laws have worked in other States, New Jersey for example, they are fine examples of good intentions leading to perverse methods and bad results. Text-book publishers understand that the crasser and more violent their "scientific temperance" chapters can be made, the better chance will their wares have of securing the approval of the Women's Christian Temperance Union, which gives its "imprimatur" very much in the fashion of a Catholic prelate; and they proceed accordingly. The result is to degrade the character of the books and make their publishing and supply a species of monopoly. It would be just as reasonable to pass a law that no history should be used in the schools which did not devote twenty pages to denouncing the papacy, or defending the right of secession, or what not. Such laws are bad both for the book-makers, the schools, and for temperance; and this is the opinion of the official heads of the Board of Regents, and of several bishops and clergymen, who were quoted on Sunday by the Superintendent of Public Instruction. Bishop Huntington's opposition to the bill is all the more notable in that he confesses having signed a petition in favor of its enactment, but now concludes that "the arguments and facts against it appear to be abundant and conclusive." Dr. W. R. Huntington of this city writes with special competency, as he has been a member of a committee created for the specific purpose of studying, "from a scientific and impartial standpoint," the whole question of alcoholic stimulants, particularly its "educational phase." He protests with sufficient plainness against "palming off pseudo-chemistry and inaccurate physiology as necessary truth." Back of all this dispute over text-books and methods lies the fact that legislation of this sort is essentially hypocritical. Legislatures are entirely willing to please good people with a pretence of doing something against the saloons. If the Woman's Christian Temperance Union would but reflect how impossible it would be to get a law from the New York Legislature stringently regulating or repressing the liquor traffic, it would see how such legislation as it is able to secure inevitably has an air of burlesque and false pretence. In New Jersey one may see a licensed saloon planted directly in front of a public school.

We have been favored with a newspaper clipping which shows "a marvellous growth of the American tin-plate manufacture," and the writer who sends it to us says that it is only a short time since we were ridiculing and belittling every attempt to establish that industry in this country. Not exactly. We did object to the attempt to double the tin-plate tax on sixty-five millions of people in order that half-a-dozen persons might carry on the business in this country. The McKinley tariff was enacted in 1890, and in it the tin-plate duty was raised from 1 cent to 2 2-10 cents per pound. Before the industry was established, the Democratic party came into power pledged to put the duty back to the old figure, and this has been done substantially, the new rate being 1 1-10 cent per pound. Now the singular and admirable fact is that neither the advent of the Cleveland Administration nor the reduction of the tariff to the old figure has had any deterring or deleterious effect on the tin-plate industry. On the contrary, it has grown more in the past two years than it did in the previous two years. New industries which support themselves are always welcome to us. Among such industries we may mention the manufacture of quinine, which is now larger under the régime of free trade imposed upon it amid groans and shrieks by a Republican Congress twenty years ago, than when it was protected by a duty of forty-five per cent.

English notions of official propriety were recently set forth in Parliament on occasion of questions addressed to the Government regarding the attitude to be observed by certain public officers. One of these questions related to the recent article in the *Fortnightly* by the British Consul at Stockholm, on the controversy between Sweden and Norway. While mainly historical, and undoubtedly aiming to be impartial, the article bore rather heavily on the Norwegian claims. Sir Edward Grey informed the House that the Consul had been rebuked and advised that his action was an indiscretion which must not be repeated. An apology would be made to Norway if one were asked. The day before, the Postmaster-General was interpellated as to the conduct which would be required of postmasters and all post-office employees in a political campaign. He replied by reading the rule adopted by the department to cover such cases, which absolutely forbade the officers mentioned to take any open or active part whatever for or against the candidacy of any man for Parliament. They must not belong to a political club, sign a political address, or make a political subscription. They could vote as they saw fit, but were in duty bound, as public servants liable to serve under either party, to keep their political preferences to themselves.

MORE OF "COIN'S" FACTS.

Among the earliest statements in the now notorious treatise, 'Coin's Financial School,' is the following: "At the Christian era the metallic money in the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to $200,000,000." The inferences which "Coin" draws from these two amounts have been generally attacked and roughly handled by various opponents; but as a rule the statements themselves have passed unchallenged. They are taken from a report of the so-called United States Monetary Commission of 1876, which was the proud work of Senator Jones of Nevada. In his seven-day speech of October, 1893, not published, however, till January, 1894, he quoted from that report at length, and the statement as to the "amount of gold in the Roman Empire" stands on page 3674. The "friends of silver" have repeated it again and again in Congress and out of Congress, as if its figures were as certain as the roster of the United States army.

What is Senator Jones's authority for these figures? He quotes in the same speech, and scores of speakers have quoted it before and after him, a passage from the second part of Alison's 'History of Europe,' vol. i., p. 34, which sets forth a general decline in the position of man from the time of the Christian era, owing to the shrinking in the amount of the precious metals. Sir Archibald, in a sentence which Senator Jones did not quote, says: "The treasure which formed the sole circulating medium of the Empire, which in the time of Augustus had been £380,000,000, had sunk, in that of Justinian, to no more than £80,000,000 sterling." These numbers Alison declares are based on authentic materials, set forth in an essay on the "Fall of Rome," to which he refers his readers. But this essay is not easily accessible, and we may question whether even Senator Jones, much less any of his countless copyists, including "Coin," ever saw it. At all events, they have never favored their countrymen with the "authentic materials." One need not waste time in discussing Sir Archibald Alison as an authority in political economy. None of the silverites who have repeated this paragraph on the metals to tediousness, would ever dream of quoting on any other subjects that fine old crusted Tory, who, for all he knew of the science of government and the progress of mankind, might have sat in Lord North's Cabinet. He could describe campaigns vividly, in spite of a bad style, and was a diligent and honest collector of facts when there were any facts to collect, but he could no more draw a sensible philosophical system from them than he could find the North Pole.

In the present case what earthly means had he, or Senator Jones, or "Coin" for determining the amount of gold and silver coin in the time of Augustus or Justinian or Columbus? And one would like, in passing, to ask "Coin" to tell, without looking in an encyclopædia, how far apart he supposes the last two were. What statistics exist of any treasury or mint or private estate in A. D. 1 or A. D. 500 or A. D. 1500? The whole science of political arithmetic is the invention of the last two centuries and a half—its accurate development can barely be traced through half that period. It is almost impossible to make any accurate numerical estimates for those days, even the latest; and for the earliest, absolutely so. We dare not say positively whether the population of Rome under Augustus was considerably smaller than Chicago's, or considerably more than London's, or somewhere between these extremes. No doubt both Augustus and Justinian tried to ascertain the total amount of taxable property in their respective empires; but the way taxes were farmed would make honesty almost impossible; and then, as now, book debts existed up to the millions, making a wide gulf between property and cash. The practice of hoarding was so general that the Roman satirists and the Christian evangelists both speak of it as a commonplace thing, and their treasury accounts and mint accounts are not accessible to us. What statistics exist of the produce of the royal mines in Greece and Spain of which Sir Archibald talks so much as giving out at the Christian era?

Scores of these questions might be asked, and they cannot be answered. If one doubled or halved any of the totals, it would be impossible to prove a blunder. Then what do these gentlemen mean by the "Roman Empire" wherein the money had shrunk? The empire of Augustus and that of Justinian were not the same. What is meant by "the metallic money of the Roman Empire at the end of the fifteenth century"? There was no doubt a territory then called the Holy Roman Empire; but it lay utterly outside that of Justinian, and almost entirely outside that of Augustus. One might as well compare the English monarchy of 1400 when it took in half France, of 1770 when it took in the American colonies, and of 1895, when it takes in India, having successively lost the other two. There are no trustworthy facts on which such estimates can be made; and the countries to which the estimates are applied do not admit of comparison.

And this is the stuff that has been quoted again and again by the "friends of silver" for twenty years! Alison, who has been the laughing-stock of economists for twice that period, is exalted to a profound and keen statistician; the Augustan empire is resuscitated from the dust of Rome, of Byzantium, and of —suppose we say Frankfort—to terrify us with pictures of ruin unknown to Gibbon, to Merivale, or to Mommsen, all derived from a mysterious shrinkage of what are perhaps the least destructible commodities used by man, and all done with a gravity which really makes intelligent men set to work to disprove the arguments erected on this basis, when in point of fact the true answer to the entire assertion is the same that has been applied to so many of "Coin's" other statements: "The boy lied."

THE CASE OF YICK WO.

Now that it is settled that the controversy over the registration laws of South Carolina will be carried up to the Supreme Court for a final decision on Judge Goff's ruling, it is worth while to recall the judgment of that tribunal in the case of Yick Wo vs. Hopkins nine years ago, as showing its view of the scope of federal interference in matters of State and even municipal legislation.

Yick Wo, a native of China, went to California in 1861, and engaged in the laundry business, which he carried on from the first in the same premises, under licenses from the fire and health officials. In 1880 there were about 320 laundries in the city and county of San Francisco, of which about 240 were owned and conducted by subjects of China. Of the whole 320, about 310 (Yick Wo's among them) were constructed of wood, like nine-tenths of the houses in the city. The capital thus invested by Chinamen was not less than $200,000, and they paid annually, for rents, licenses, taxes, gas, and water, about $180,000.

In 1880, ordinances were enacted making it unlawful for any person to establish or carry on a laundry within the corporate limits of the city and county "without having first obtained the consent of the Board of Supervisors, except the same be located in a building constructed either of brick or stone"; and punishing any violator of the ordinance by a fine of not more than $1,000, or by imprisonment for not more than six months, or by both. Yick Wo and 200 countrymen who carried on their business in wooden houses, under licenses from the Fire Wardens and Health Officer, petitioned the Supervisors for permission to continue in the same premises which they had been occupying in some cases for more than twenty years. All such petitions of Chinamen were denied. At the same time all petitions of laundrymen who had wooden buildings but were not Chinese, were granted with a single exception. Scores of Chinese laundrymen were then arrested for carrying on business without the required legal consent, and their business was practically ruined. Yick Wo was tried in a police court, found guilty of violating the ordinance, and sentenced to pay a fine of $10, and in default of payment to be imprisoned at the rate of one day for each dollar of fine until the fine should be satisfied.

The case was carried to the State Su-

preme Court, which sustained the local ordinance. Appeal was taken to the federal Supreme Court, which pronounced judgment on the 10th of May, 1886, the late Justice Matthews delivering the opinion. The court reversed the judgment of the State court, and rested its decision upon that clause of the fourteenth amendment to the federal Constitution which says:

"Nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

This provision was held to apply equally to Yick Wo and other Chinamen in like case, because the treaty between the United States and China guarantees to the latter's subjects in this country the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens of the most favored nation; and the Revised Statutes provide that all persons within the jurisdiction of the United States shall have the same right in every State and Territory to make and enforce contracts, to sue, be parties, give evidence, and to have the full and equal benefit of all laws and proceedings for the security of person and property, as is enjoyed by white citizens, and be subject to like punishment, pains, penalties, taxes, licenses, and exactions of every kind, and to no other. It was contended by Yick Wo's counsel that the ordinances for the violation of which he was sentenced were void on their face, as being within the prohibition of the fourteenth amendment; and, if not so, that they were void by reason of their administration "operating unequally, so as to punish in the present petitioners what is permitted to others as lawful, without any distinction of circumstances—an unjust and illegal discrimination, it is claimed, which, though not made expressly by the ordinances, is made possible by them." This latter position was sustained by the Supreme Court.

The Supreme Court of California had held that the city had the right to make ordinances to regulate laundries with a view to the protection of the public against such dangers as those of fire, but the federal court found nothing in the ordinances under review which pointed to such a regulation. On the contrary, the Supervisors were granted a purely arbitrary power. Yick Wo had complied with every requisite deemed necessary by law for the protection of neighboring property from fire or as a precaution against injury to the public health. No reason whatever except the will of the Supervisors was assigned why he and his two hundred fellow-countrymen should not be permitted to carry on their business in wooden buildings while eighty others not Chinese subjects were allowed to carry on the same business under similar conditions. The fact of discrimination against the Chinese was admitted, and no reason for it could be imagined except hostility to their race and nationality.

With reference to the principles that govern such cases, the Court said:

"The cases present the ordinances in actual operation, and the facts shown establish an administration directed so exclusively against a particular class of persons as to warrant and require the conclusion that, whatever may have been the intent of the ordinances as adopted, they are applied by the public authorities charged with their administration, and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of the equal protection of the laws which is secured to the petitioners, as to all other persons, by the broad and benign provisions of the fourteenth amendment to the Constitution of the United States. Though the law itself be fair on its face and impartial in appearance, yet, if it is applied and administered by public authority with an evil eye and an unequal hand, so as practically to make unjust and illegal discriminations between persons in similar circumstances, material to their rights, the denial of equal justice is still within the prohibition of the amendment.

"The discrimination is therefore illegal, and the public administration which enforces it is a denial of the equal protection of the laws and a violation of the fourteenth amendment of the Constitution. The imprisonment of the petitioner is therefore illegal, and he must be discharged."

This seems to be a broad assertion by the highest court in the land of the power to investigate the workings of any local law, and to interfere for the protection of a citizen against the unjust administration of any statute. The South Carolina registration law requires any man whose name has never been on the list to make an affidavit setting forth his full name, age, occupation, and residence when the act of 1882 was passed, or at any time thereafter when he became old enough to vote, "and the place or places of his residence since the time when he became entitled to register," and this must be supported by the affidavits of two "reputable" citizens who were each twenty-one years old in 1882, or at the time when the applicant became entitled to register. The registrar is given authority to determine whether the citizens who make the supporting affidavits are "reputable." If it should be established that this discretionary power has been abused, the decision in the case of Yick Wo would indicate that the Supreme Court of the United States might claim the right of the federal authorities to interfere.

"ADVOWSONS."

THERE is probably nothing in England more mysterious to foreigners than advowsons, and not many things which play a more prominent part in English life and have contributed more cases to the English law reports. An advowson is the right to fill a vacancy in the ministry of a parish, or, in technical phrase, the right of "next presentation to a living," and is, under English law, a salable commodity. It probably originated in the fact that the endowments of the English Church are nearly all parochial—that is, each parish minister is maintained by parish tithes or glebe lands given for the purpose in early ages, probably by the owner of the adjoining or contiguous lands, who made it a condition which grew into a custom, and then into legal right, that if he provided for the clergyman's maintenance, he should have the right to say who the clergyman should be. In fact, it resembled in its beginnings the modern practice of founding a professorship in a college with the understanding that the first occupant of the chair shall be chosen by the founder.

A very large number of livings are in the gift of the Crown, of the Lord Chancellor, of the Archbishop of Canterbury, of wealthy noblemen, and of the universities. None of these patrons have any use for them except to oblige friends or to reward deserving clergymen. But a very large number are in the gift of needy persons who by no means object to turning an honest penny by the sale of them. This selling of them, which there seems to be no means of stopping, is, however, illegal if the living be vacant. It is then called a simony. But a sale of the right to present when it becomes vacant at some future period, when, for instance, the actual incumbent dies or resigns, is a legitimate exercise of the rights of property. This has led, not unnaturally, to clergymen with means buying livings for their own use—that is, buying the right to cure the souls of a definite body of believers; such purchasers, of course, being often persons whose own souls were in a perilous condition. The scandals of the traffic are immense, and they are discovered by means of advertisements in the newspapers. The Archbishop of Canterbury produced some of these advertisements in the House of Lords the other day. He said:

"The value of benefices is going down, and is, in fact, so far reduced that the purchase of an advowson or next presentation is the very best investment that a clergyman can make, as he can obtain a rate of interest immeasurably beyond what he can get in any other way; and if he can leave it behind him as property, it is property which yields an immense rate of interest. As the value of livings goes down, the sales of livings increase. This is a matter of fact. For instance, there were eighty-three advertisements of advowsons in the advertising columns of the *Times* during the months of January and February, 1895, against thirty-seven in the two corresponding months of 1894. I have before now quoted to your lordships very shameful advertisements, but I should like to read two or three selected from advertisements actually in circulation now, simply to show the House that, while the advertisements have got rather less barefaced, their description and character show that they are intended for a class of persons very unlike that spiritual pastor whom your lordships would most wish to see in livings of your own, in love with his work and with his people.

"The advertisements run this sort of way: 'This preferment is only suited to a clergyman who is prepared to give a fair price for a really desirable county benefice.' 'This is an unusually desirable gentleman's property'; then comes a description of the house and grounds, concluding, 'This is a very compact gentleman's property in perfect repair.' The descriptions are interlarded with announcements that the benefices are near good towns or convenient railway stations, that yachts or fishing are to be had, and, what speaks for itself, 'first-class society.' (Laughter.) There are also more serious and grave defects appearing in the advertisements. One is, that 'there are no schools.' This would attract the kind of man who wants no trouble with the children of his parish. Another is, that the income of the benefice is derived from tithe-rent charge and the ecclesias-

tical commissioners. Where an income with very poor means has been augmented by this body and brought up to, say, £300, this is used, in some cases, as an instrument to make a large sum out of the sale of the benefice. The amount of charities bestowed on a parish is even held out as showing that there will be no demands made on the pastor. These descriptions are also, in some cases, colored with the most nauseous statements, that an 'evangelical' or a 'Catholic' clergyman is required."

This quotation is from a speech made by the Archbishop in introducing a measure of reform, but, oddly enough as it will seem in American eyes, it contains no hint of the abolition of the sale of presentations. It simply proposes to increase the power of the bishops over the character and qualifications of the persons presented. It will prevent a clergyman from buying the presentation in order to present himself—a not uncommon practice—and it will interpose a period of twelve months between the purchase of a presentation and the actual presentation. This last clause is meant to prevent speculation on the age of the actual incumbent and bargains for immediate resignation. But among the arguments against this to which the Archbishop gives weight is the following:

"A man who has just bought a large property may wish to buy the advowson of the neighboring church because it is to him a matter of the highest interest that there should always be a fit person presented to the living, and it would be very hard on such a man if, after having bought the advowson, the clergyman should die or be promoted within twelve months, so that he would not again have an opportunity of presenting to the church for perhaps forty years."

From any one who knows anything of the actual practice, the supposition that the purchaser of "the large property" will consider mainly the claims of the parish souls, and not the interests of a clerical son, brother, or friend, will call forth a smile.

There could hardly be a more interesting illustration than this whole subject of the conservative tendencies of the English mind regarding property. No one dares to propose the abolition of the entire system of appointing ministers, because the right of presentation has been for centuries recognized as private property by the English law, and no attempt to take it away without compensation would be thought of, while compensation would amount to an enormous sum. All that the Archbishop proposes is to remedy some of the very grossest abuses. Not a word escaped his lips going to show that he considered the whole system of providing religious pastors for the English people a very gross abuse, or even a system calling for any defence or apology. On the contrary, he and a large body of the clergy have used as their strongest argument against Welsh disestablishment, that it would endanger in England this mode of filling the parish pulpit. It has grown up, as the purchase of commissions in the army grew up, under the influence of the intense respect of the English mind for usage or prescription—that is, for anything which has been done without hindrance or opposition for long periods of time. The crop of abuses which came down from the Middle Ages under the shelter of prescription was very great. The monasteries and the municipal corporations were the greatest. Property in military commissions grew up later, but its abolition cost a great struggle, and is still looked on by many Conservatives as one of Gladstone's worst offences. The mode of officering the church, which really has nothing to do with the question of church establishment, is the only absurdity still left which has no better defence than long uses and "vested rights."

THE GREED OF AUTHORS.

Mr. Edmund Gosse has got himself into a pickle in a way that ought to serve as a warning to all lovers of paradox. It occurred to him, in a speech at the London Booksellers' dinner, to make a little joke about the struggling publisher at the mercy of the hard-hearted author. This was a pleasant gospel for the itching ears of his auditors, and their applause led him on from jest to earnest, and into the following dangerous assertion:

"It wants a little courage, or perhaps my brother writers will say a good deal of impudence, for an author to get up in this year of grace and seem to repudiate the 'author's rights' of which we hear so much. But I do it in the interest of the authors themselves, because I think some of our popular authors are killing the goose that lays the golden egg. . . . Often, when a very successful novel is published, you would find, if you looked beneath the surface, that the author had got the publisher's heart in a little hand-mill, and every now and then was giving it another turn, and then peeping in to see whether he was still alive, and then giving another little turn, squeezing out, drop by drop, royalty blood. . . . If the publisher is to endure the author's squeezing, he must squeeze you [the booksellers], and you must squeeze the public, which refuses to be squeezed. Then the joke is reversed, and the public declines to buy from you, and you decline to buy from the publisher, and the publisher rebels, and says to the greedy author, 'Get out of this, and starve in Grub Street, as you used to do in the good old times.'"

This would have been a dangerous saying in any land or time; and in England, within earshot of the Authors' Society, it was simply courting death. Mr. Walter Besant, as he then was (how he ever could have consented to become Sir Walter, with the implied comparison, we know not), was at once down upon Mr. Gosse with a demand that he retract or name the man. Mr. Gosse declined to do either, simply affirming that what he had said he had said "in perfect sincerity, and with some knowledge of the facts," and professing a gentle amusement over the fact that, "while for generations past everybody has been calling the publishers Barabbas without creating the least excitement, an humble person mildly suggests that authors should not be greedy, only to find the firmament rent with shrieks of censure." But the Authors' Society was not to be put down in that way. Its Committee of Management promptly passed a resolution severely censuring Mr. Gosse, and issued one of its lethal "circulars" on the whole subject.

The dreadful suspicion once laid before the public that authors were accumulating too much wealth for the safety of democratic institutions, eager and prying minds applied themselves to other aspects of the literary business, and immediately discovered new horrors. Authors are guilty, it seems, not only of selling their wares at monopoly prices, but of actually dealing in "literary futures." Cases were unearthed of novelists contracting to deliver stories of so many words and of guaranteed first-class workmanship, not only next year and the year after, but even in 1901. This is surely worse than being *fin-de-siècle*. Wherein is selling novels that do not exist any less heinous than selling futures on cotton or wheat? It is clear that the next anti-option bill will have to be enlarged so as to fine or imprison the cruel literary operators who beat down the price of this year's toilsome crop of fiction or verse by promising the weak publisher all he wants, even more than he wants, this day twelvemonth.

It is asserted, too, that the particular form of thumb-screw which the modern novelist applies to the Jew of a publisher to make him disgorge, is the threat to start a rival publishing-house which will give the author full half-profits. Scarcely more money or stock in trade is needed than is needed to set up a writer himself, and Thackeray explained what a moderate amount of pens, ink, and paper will suffice for that. Add in a sign, one chair to sit in yourself and one to plant your author in, a big job printing house around the corner to do the work, and the outfit is complete. English publishers are said always to yield at once when threatened with rivalry of this sort, despite the encouragement they might be tempted to draw from the Scott-Ballantyne partnership. American publishers, we believe, are not so easily shaken—especially not since the recent collapse of an author's publishing-house. When, as in that case, talk about 45 per cent. royalties becomes so soon talk about being perhaps able to pay 45 cents on the dollar, the oppressed publisher cannot be blamed for hoping that a few of the necessaries of life, such as yachts and villas, may be kept a bit longer from the insatiate author.

We must confess that we have not observed among authors of our acquaintance signs of the greed which troubled Mr. Gosse. Few, if any of them, we believe, would display the facial characteristics inevitably acquired by a man (as Balzac explained in the case of M. Grandet) in the habit of contemplating secret hoards of gold. Yet there are subtler and less obvious temptations to greed, or an appearance of greed, against which some of them are not wholly proof. One of these temptations is to disregard the literary company one keeps, provided one gets extra pay for it. Publishers of in-

ane or sensational periodicals boast that they can get the best names of the writing fraternity into their strange galley, provided the checks be made big enough. And it must be admitted that the results too often justify the boast. Now it will never do to rail at authors for writing for money. What was an honorable and sufficient motive for Shakspere, for Scott, for Hawthorne, is honorable and sufficient for any man. But there is such a thing as literary propriety, literary self-respect, the conventions of the craft, which no author with a reputation to sustain or to make ought lightly to violate—ought never to violate in evident obedience to the jingle of the guinea. Why should you figure in a charlatan's table of contents, any more than you would at his dinner-table, simply because you got well paid for it?

Another form of author's greed, or appearance of it, is the kind that pushes to the wall, not the luckless publisher, but the author himself and the reading public. We mean, of course, the nervous haste to take the kingdom of public favor by storm. If an author makes a hit, he must keep on hitting; if he strikes a new vein, he must at once work it out to the last filament, lest some other "jump his claim" or turn out an ore that better suits the public taste. Hence we have the feverish rush to produce the greatest possible number of books or articles in the shortest possible time, the digging up of old and unsuccessful writings to hitch them to the ones that have met with acceptance, the revamping and revarnishing. These eager authors do in earnest what Agassiz said in jest that he did—tell all he knew in the first half-hour and repeat himself ever afterwards. Mr. Howells has recently admitted that American fiction has been under a cloud for a few years past, and promises to give his explanation of the phenomenon. It is worth considering whether the haste, if not to be rich, at least to squeeze the orange dry without once relaxing the grip, has not had a good deal to do with it.

ON THE EVE OF THE ITALIAN ELECTIONS.

ITALY, May 15, 1895.

BEFORE this letter can appear in the *Nation* the general elections will have taken place. Never since the first elections after the proclamation of the kingdom of Italy in 1860 has such excitement prevailed—among candidates, electors, and journalists. The general public does not care a fig who gets in or who remains out. You will remember that the House was prorogued on December 15, 1894, precisely when the discussion of Giolitti's *plico*, or bundle of letters and documents, was to have taken place, and Crispi's report to the King provoked the meeting in the Sala Rossa, where the Marquis di Rudini, the late Prime Minister, and Zanardelli met Cavallotti and other Radicals and Socialists to protest in the strongest terms against the insults to the national representation contained in that report. It was agreed that all these parties or fractions of parties should pursue their work of opposition separately and independently. Certainly no one then dreamed that another six months could pass without the reconvocation of the old house or an appeal to the country. Such, however, has been the case, and during this time the nation has been governed as in the old days of despotism—royal decrees taking the place of laws discussed and voted in Parliament, old taxes increased and new ones imposed without the sanction of the national assembly. The ministerial pretext is that the electoral lists had to be revised, and that this could not be done in a shorter time. Now, at least, it is done with a vengeance, and some half a million of electors have been struck off the list. What really caused the delay was the action for libel brought against Giolitti by Crispi for the letters and documents handed over to the President of the Chamber, and which it was hoped would be subject to the ordinary tribunals. The Court of Cassation, however, which is independent, ruled that a minister or ex-minister can be tried only by his peers for acts or words done or spoken in the exercise of his functions; that hence it is for the House to decide whether Giolitti shall be tried by the high court of the Senate or the affair be quashed. Giolitti demands his trial; whether he will succeed will depend on the composition of the new House.

That with the Clericals and Crispinians combined the Government will have an enormous majority is certain, but how long it will remain faithful is by no means so sure. Every pressure has been brought to bear in the administrative elections, and in Milan, in Mantua, where the Democrats were all-powerful, this time they have been routed all along the line. The most astounding defeat is that of Zanardelli and his party at Brescia. He and Rudini keep their polemics within decent bounds, yet Crispi's organ *La Riforma* treats them with no more politeness than is dealt out to Cavallotti, who gives a Roland for an Oliver and something into the bargain. As we blamed Giolitti for presenting to the House a bundle of private letters to which he had no right, and of public documents which he ought to have handed over to the committee of seven, so we have no sympathy with Cavallotti, the "bard of democracy," who turns private detective and buys up from the scum of creation all the letters and documents which he can lay hands on to damage the reputation of Crispi. Still, though the manner of the revelations disgusts one, the facts remain, and are of a most serious nature. It is shown how much money was spent to prevent Imbriani's election, and how the attempt failed, how 500 lire per month was paid to one editor. But this is nothing to the treatment of the numerous unhappy prisoners arrested illegally and sent to the fortress of Port Ercole, stived in filthy dens, compelled to sleep on the straw with one covering, no mattress in this bitter winter, ragged, shoeless, full of vermin; old delinquents set free at the entreaties of a Deputy; perfectly innocent men, because Socialists, still detained with one pound of bread and bean soup for all sustenance; neither doctors nor medicine for the sick for two months running; an old man of eighty blind, another a cripple, a third a paralytic. In publishing these revolting details, Cavallotti piles the agony high by quoting Mr. Gladstone's letter to Lord Aberdeen anent the Neapolitan dungeons in 1850, and, sad to say, the story of yesterday and of to-day tally all too well.

Serious as are these charges, to me the gravest error committed by Crispi is that narrated by Marescalchi after resigning. He was one of the best functionaries in Italy; counsellor of the prefecture of Bologna during the sitting of the committee appointed to examine the cases, one by one, of the men arrested by the police and recommended for "domicilio coatto." Said committee in Bologna soon found that most of these unfortunates were as innocent as themselves, and were arrested to satisfy the private vengeance of so-and-so or of the police themselves. Hence the commissioners, magistrates, all, save one doctor, the secretary Condulmer, refused to sentence the innocent, and asked in some cases for further evidence against other accused. On this the counsellor is called up and informed that the questor is furious with the committee for setting free a certain Rubbi and for asking for further evidence against Gabussi, "who in any case is to be sent to *domicilio coatto*." One prefect was removed from Bologna and another sent, to whom Crispi telegraphed his displeasure "at the way in which the committee applied the exceptional laws," and continues: "I have written to the keeper of the seals to call the two magistrates on the committee to order, nor can I refrain from expressing my disapproval of the conduct of the counsellor of the prefecture. He ought to have supported the police through thick and thin, *i. e.*, have voted for the punishment of all of those denounced by the police. Instead of this, by agreeing with the two magistrates, he has been false to his duty." And to punish him for so doing he was removed by telegraph to another seat, with his vice-chief and the secretary Dr. Condulmer. The commissioners were changed, and the condemnations were passed wholesale and in such haste that many of the prisoners found themselves at Port Ercole without knowing of what they were accused or that they were condemned to *domicilio coatto*. Marescalchi sent in his resignation immediately, and has recourse to the Council of State against Crispi for violation of the law and abuse of power. But how many public servants with large families and no private property can afford to obey the dictates of their conscience?

Meanwhile the Socialists are more active than ever in their propaganda. They have presented seventy candidates, declining the alliance with Republicans, Democrats, or Radicals, by which they might carry many colleges, whereas now it is doubtful if they succeed save in a very few; but they say frankly: "We mean to count our forces on the first Sunday at the polls. We shall all vote for the Liberal candidate against the Crispinos." The Pope still maintains his veto, and the old programme of Pio Nono, "neither electors nor elected"; but how many will obey him? Cardinal Hohenlohe, who, at a dinner in his beautiful Villa d'Este at Tivoli, toasted the future candidates who should support Crispi, has been summoned to the Vatican by his Holiness, and, after a severe reprimand, requested to absent himself from Rome for a month, *i. e.*, till the elections are over; and the delinquent has betaken himself to Montefalco. The *Osservatore Romano* publishes a letter from the president of the Catholic congresses and committees to all the members of the regional diocesan and parochial committees, enjoining strict obedience to the Pope's decree.

"This time the abstinence should be total, full, and free, not only in virtue of absolute and unconditional obedience to the Pontiff, who will never admit the right of any one save himself to rule in Rome, but also to prove that it is vain to hope for the participation of Italian Catholics in the public life of their country until justice has been ren-

dered to the Holy Father—the justice that he demands. And if this, our policy of abstention in political elections, should convince those in whose hands are the destinies of our fatherland of the necessity of coming to a real understanding with the Supreme Pontiff, it will show that ours is not useless inertia, but one of the most efficacious modes of action."

The president promises to make known the number of abstentionists.

The only political manifesto yet published is Rudini's letter to his electors—a dry, heavy, but remarkable document, which would require a whole number of the *Nation* to examine and criticise. It is divided into two parts: the first expounds the reforms necessary to remedy the administrative, judicial, and economical abuses of which all complain in Italy. "Without these reforms," he writes, "I do not believe that we can for long preserve the fundamental laws of the state. Unless the nation is convinced that it can obtain a government founded on justice and morality, all governments will forfeit their *raison d'être* and all powers of resistance." To-day Italy, depressed, cares less for representative institutions than in the days gone by. Rudini, like all Sicilians, and now the Lombards, has always leaned towards the utmost decentralization, to local government, and there is no doubt but that the intense centralization which makes the Government arbiter, nay despot, in every branch of human affairs has contributed more than aught else to the present state of corruption and anarchy. Rudini proposes in reality the old regional system desired by Minghetti—each region to have at its head a lieutenant-governor. As a Conservative, he would have all associations bound to lay their status and number of members before the authorities; would restrict the suffrage still more than has just been done. Here the Radicals will separate from him should he return to power. What is certain is, that as long as the Government interferes, by bribery and corruption, in the elections, and allows the Government candidates to promise in its name all sorts of favors and prizes to individual electors and to communes, the wheels of state can never run fairly and smoothly; and unless immorality and peculation are punished in high places, it is useless to expect decency and honesty in the multitude.

Crispi has *posed* his candidature in about twenty colleges, and at the grand banquet which it is said will be offered to him at the baths of Caracalla he will deliver his "great speech." In all their old colleges the ministers will follow his example. The one discourse eagerly expected is that of Sonnino, who has never lied in his financial statements, never pretended that two and two make five, or that the outgo and income of the state is balanced; but he is a very Philistine in laying the taxes on the poorest classes, and all are anxious now to know whether they are to be mulcted still further. The programme of the Piedmontese opposition is one long protest against all the sins of commission and omission of the present Government, the arbitrary closure, the prolonged suspension of parliamentary debates, the royal edicts, the imposition of taxes without the consent of Parliament. They maintain that without radical economies in every branch of the administration, *even in the army and navy*, the country can never be redeemed. As for Eritrea, though they do not ask for total abandonment, they do protest against expansion; and as the manifesto is signed by the ex-Minister of the Navy, Brin, with seventeen other Deputies, it has a certain value of its own. Numerous colleges have invited Zanardelli to stand, but he has answered all, that, as he has ever disapproved of double elections, he cannot accede to the requests, but remains with only one string to his bow in his old and faithful college of Iseo.

J. W. M.

BARRAS'S MEMOIRS.—I.*

PARIS, May 22, 1895.

"HABENT sua fata libelli" is especially applicable to Memoirs. Strange is the history of many of them; the precautions taken by the writer often turn against his intentions. It happens, for instance, that the Memoirs of Barras, which are a violent pamphlet and diatribe against the Emperor Napoleon and all his family, are now published, a long time after they were written, by a man who is an ardent Bonapartist, viz., M. George Duruy, son of the historian Duruy, who was a minister of public instruction under Napoleon III. The elder Duruy was no ordinary man; he may be said to have brought about a revolution in the French University by using in his books the documents and methods of the new historical school. He was a strong liberal, and was called to the post of minister of public instruction by Napoleon III. at a time when the Second Empire was at war with the bishops of the Senate. His son, the editor of the Memoirs of Barras, has acquired some reputation in the literary and journalistic world.

Barras made his will on April 30, 1827. He said in it: "I give and leave to M. Rousselin de Saint-Albin an edition of 'Anacharsis' and my geographical maps. I wish besides that my papers and memoirs, deposited with one of my friends, should be given to him that he may edit the memoirs, as time has not allowed me to do so." Feeling himself very ill on the morning of January 29, 1829, he said to his godchild, M. Paul Grand, that he feared much lest his papers should be seized after his death, as there was among them a correspondence between himself and King Louis XVIII. He advised him to hide them, and died on the same day, at eleven o'clock P. M. M. Grand, with a servant, filled two trunks with the papers and had them taken in the night to the house of M. de Saint-Albin. The next day a search was made by a justice of the peace, and everything was put under seal. Madame de Barras instituted, on this occasion, a lawsuit, which was really of no consequence, as all the important papers were already in the hands of M. de Saint-Albin.

What were these papers, and what were these unfinished memoirs? M. Duruy explains at length; he tells us that Barras wrote long notes at various times on the events in which he had taken a part; these notes were materials for his future memoirs, some parts of which had afterwards received an almost definitive form. Sometimes two or three versions of the same event were made. Barras's wish was that his friends should make a whole of all these materials and give to his memoirs the best literary form; he desired that M. de Saint-Albin should with M. Paul Grand classify the papers (which were as many as 15,000), and do the final editing of the memoirs. M. Duruy (and I must agree with him) prefers the original editing of Barras to the more finished and literary editing of Saint-Albin, who conceived his work after the literary taste of a period which was too fond of rhetorical amplifications. However, Saint-Albin was faithful everywhere to the thought of Barras; he did not alter the texts; he simply clothed them in what he considered a decent and suitable style.

It would be tedious to give an account of the quarrels between Saint-Albin, Mme. de Barras, and M. Paul Grand on the subject of the Memoirs; it is enough to say that an agreement finally took place between the contending parties, and the Memoirs became in 1834 the exclusive property of M. de Saint-Albin. Why did he not then publish them? It was because his legal adviser told him, after having read them, that there was in them "un nid de procès correctionnels"—a fountain of libel suits. St.-Albin was unwilling to make any changes or suppressions in the work which he had received in trust, and he decided to keep the Memoirs in his portfolio. He died in 1847, and his children were also unwilling to publish the Memoirs. The elder, M. Hortensius de Saint-Albin, was, under the Second Empire, a Councillor in the Court of Appeal in Paris. He died in 1877. His brother, M. Philippe Saint-Albin, who became possessor of the Memoirs, was for a long time librarian of the Empress Eugénie; I knew him as a colleague in a society of bibliophiles—the most pacific, the gentlest of men. The idea of publishing a work which was a bitter satire on Napoleon and his family could never have entered his mind; he left the manuscript at his death to his sister, Madame Achille Jubinal, the widow of a Bonapartist Deputy of the Second Empire. M. Duruy entered by marriage the Jubinal family, and thus came into possession of the famous Memoirs. M. Duruy has thought it necessary to add very lengthy prefaces to the two volumes which have now appeared. He takes great pains, as a critic, to attenuate the historical importance of Barras's accusations against Napoleon. He oscillates constantly between two positions, that of editor of Barras and that of an admirer of Napoleon. He does not count sufficiently on the intelligence of the reader, who is perfectly capable of making allowance for the passions of Barras, who is well known to history as a profligate, cruel, perverse, and contemptible man. He was, at the same time, a man of intelligence, resolution, and courage, as he showed at different times in the terrible period of the Terror.

Barras was born on June 30, 1755, at Fox-Amphoux, in the department of the Var. The antiquity of the Barras, said a proverb of the country, equalled that of the rocks of Provence. His uncle, Melchior de Barras, Vice-Admiral, commanded a French squadron during the American war of Independence. He was one of the signers of the capitulation of Cornwallis. The Terrorist of 1893 likes to say that "the Blacas, the Pontevès, the Castellane, pretended to be our relations." He entered as cadet in the regiment of Languedoc. The history of his first expeditions, at Pondicherry, at the Île de France, is interesting enough, but more than one reader will leave it unread and turn at once to the chapters which herald the great Revolution. We find him in Paris, with little resources, living at the expense of an old aunt, and already in very bad company, a friend of the famous Madame de Lamotte of the "necklace," an associate of the Cardinal de Rohan. To do Barras justice, he says that it has been proved to him "that Marie Antoinette was not only innocent, but an entire stranger to this *tripotage* in which odious swindlers, as guilty as murderers, with unexampled audacity, thought to involve her name and person. I confess that my life as a young man generally not as particular in his relations as he should have been, threw me into

* 'Memoirs of Barras, Member of the Directorate.' Volumes I. and II. Harper & Bros.

the society of the woman Lamotte. I was not enough on my guard; I could not imagine how much perversity there was in her."

Barras was appointed administrator of the Var, and afterwards a member of the Convention. He threw himself from the first day into the current of the Revolution. The Convention ordered a levy of 300,000 men, and Barras was sent with Fréron to the Alps, where he had to organize resistance in the departments of the Hautes and Basses-Alpes. The important city of Toulon had been given over to the enemy, and the siege of Toulon became a necessity. It was during this siege that Barras heard of the execution of the Duke of Orleans (November 6, 1793). It is curious to see in what terms he speaks of him:

"I had sometimes met the Prince before and during the Revolution, and I always found him a man of simple manners, loving liberty like a private citizen, and without any personal ambition. It is possible that some of his friends entertained it for him or for themselves; he never was their accomplice; and it is in this sense that people could say that he was the least Orleanist of the Orleans faction. The execution of a beneficent prince, popular and quite inoffensive in politics, lacked even a pretext on the part of those who committed this crime deliberately and for their pleasure. It was one of the most delirious acts of the Revolution."

We note this judgment, without forgetting that the Duke of Orleans, by voting for the death of Louis XVI., did not allow history to pity him.

Let us return to the siege of Toulon. Barras needed an officer capable of placing a battery well; he found a very young one. "Satisfied," he records, "with a report he made to me, I said to him, 'I thank you, Captain.' He answered, very respectfully: 'I beg your pardon, I am only a lieutenant.' 'You are captain,' said I, 'as you deserve and I have the right to appoint you.' This was the first interview I had with Bonaparte." It is notorious that Bonaparte conceived the plan for retaking Toulon without making a regular siege from the land side; he made it impossible, by placing a battery on a certain cape, for the English fleet to remain in port, and when the English had retired, Toulon was easily captured. Barras takes great pains in his memoirs to minimize the part taken by Bonaparte and to magnify his own. He calls Bonaparte "mon petit protégé," and assumes a great superiority over him. "We are," he says, "generally disposed to a certain kindness, even to a certain admiration, for the man who in a frail body shows more strength than nature seems to have given him." He found in Bonaparte a certain likeness to Marat. "I saw a good deal of the latter on the benches of the Convention and even previously." The portraits of young Bonaparte and of Marat do not show the smallest likeness, and it is almost incredible that Barras should have discovered any.

The siege of Toulon was a great triumph for the republican army: after the operations of this siege, Barras returned to Paris. The Terror was at its height, and Robespierre had become a sort of Dictator. Barras was not without some uneasiness; he had been accused of many corrupt practices while he was in the south of France, and the "incorruptible" Robespierre was not lenient—his will was supreme in the Executive Committee of Public Safety:

"I had already," says Barras, "been two days in Paris, quite dumbfounded by what was going on, putting questions to everybody which received but evasive answers, when I seemed to wake up on hearing that my arrival was known to the members of the Committee of Public Safety, and that they were surprised that I had not yet brought my accounts and paid my respects to them. I went in consequence to the committee; Robespierre, Billaud, Carnot, Barère, Prieur de la Côte d'Or, Robert Lindet, were in session. I imagined that I had a right to find in their attitude the expression of some satisfaction. . . . The members of the Committee, seeing me come in, remained sitting and mute, their eyes fixed on their portfolios."

In the Convention, Barras received the felicitations of the assembly; we see in this contrast the germ of the division which culminated in the famous revolution of the Ninth Thermidor. "Robespierre had attained to a true Dictatorship by his reputation for incorruptibility and, so to speak, immobility; he had never varied in language, in manners, or in dress. He was always powdered, though powder was proscribed, atrabilious, sad, just as he had presented himself to the States-General." Barras thought it necessary to pay a visit to Robespierre, in the little house which he inhabited in the Rue Saint-Honoré. He dared not go alone, and was accompanied by Fréron. They were very coldly received; Robespierre finished his toilet before them, and hardly opened his mouth. Soon afterwards Danton was arrested and executed. On his way to the guillotine he passed before the house of Robespierre. He rose a moment on the bench to which he was tied, and, with his powerful voice, screamed, "You will follow us soon." After the sacrifice of Danton and the Dantonists, the remaining members of the Convention lived in perpetual fear. The real power was in the Executive Committees, and in the Club of the Jacobins, where Robespierre was omnipotent. Barras, feeling himself despised by Robespierre, tried, at the risk of his life, to form in the Convention the nucleus of an opposition to Robespierre and the Committees. He always wore arms. The first nucleus of the Thermidorians was composed of only seven members. We shall see now how the drama of Thermidor developed itself, and what a prominent part Barras took in it.

Correspondence.

WASHINGTON'S ANCESTRY.

To the Editor of The Nation:

Sir: A close examination of the records of Westmoreland and Northumberland Counties, Va., made several months ago, has possessed me of facts which may be of interest to some of your readers. The will of Col. John Washington, the immigrant, speaks of a second wife, but it has been supposed that this wife (name unknown) preceded Anne Pope. I am satisfied that the first wife of Col. Washington was Anne Pope, and that the second wife was Anne, widow of Walter Brodhurst. But, more than that, he had a third wife whose existence has never been dreamed of—a widow, Frances, daughter of Col. Thomas Gerrard, formerly of the Council of Maryland.

Now for the proof. From the records it appears that Walter Brodhurst died between January 26 and February 12, 1659, respectively the dates of making and proving his will, and that Anne Pope was certainly wife of Washington previous to May 11, 1659, when she received a gift from her father, Col. Nathaniel Pope, under the name of "Anne Pope, *alias* Washington." But that she was not Walter Brodhurst's widow is shown by the record of a suit, September 20, 1659, in which this lady appears as "Anne, the relict and widow of Walter Brodhurst." Ten days later Washington wrote to the Governor of Maryland that "all the company and gossips were invited to see his young son baptized," which could not have been over eight months after the death of Walter Brodhurst. The son was baptized during the marriage with Anne Pope, and it must be remembered that when Washington came to Virginia in 1656, aged about twenty-five, he stayed at the house of Col. Nathaniel Pope, where, perhaps, his affections ripened for her, and a marriage shortly afterwards ensued.

But in 1670 appears this entry, under a statement of accounts:

"We whose names are here underneath subscribed according to order of Westm^{r}land Court bearing date the 28th of Septemb^{r} 1670, having ꝑused the Gen^{ll} & ꝑticular Accounts Exhibited unto us by Lt. Coll. John Washington who married Anne the relict of M^{r} Henry Brett late of y^{e} County Deced, wee have examined y^{e} whole Inventory & Debts of y^{e} said Henry Brett And we Doe finde that M^{rs} Anne Brett als Washington hath paid beyond assetts the sum of sixteen thousand three hundred twentie nine pounds of tobacco & caske [etc.] as witness our hands this 3^{d} of 9b^{r} 1670. John Ashton, William Horton. 9th of 9b^{br} 1670, This Report with y^{e} account annexed to it was Recorded."

In another place, under date of May 31, 1671, Mr. Samuel Brett of Plymouth, merchant, empowers certain persons to execute a discharge to "Lt Coll Washington who Intermarried with M^{rs} Ann Brett y^{e} Relict & administratrix of Henry Brett of Plymouth merchant deceased."

An inspection of the will of Col. Washington, as published in the *New England Historical and Genealogical Register*, dated September 21, 1675, and proved January 10, 1677, clearly shows that the wife Anne therein mentioned was not the mother of the three children named Lawrence, John, and Anne, but the dead wife mentioned. Now who was the Anne Washington of the will? No other than Anne, the widow of Walter Brodhurst, who in the interval since his death had picked up Mr. Henry Brett, who, like most of the leading Virginia merchants, had business in both countries. This is shown by a letter of Col. Chester to Mr. Brock, which contains a copy of an old document in the Diocesan registry at Lichfield, dated April 12, 1678, evidencing that Walter Brodhurst, her son, "was granted administration of the goods of Anne Washington, alias Brodhurst, late of Washington parish, in y^{e} County of Westm^{r}land, in y^{e} countrey of Virginia."

Now in Westmoreland there is a marriage contract between Col. John Washington and Frances Appleton, widow of Capt. John Appleton (*née* Frances Gerrard), dated May 10, 1676, showing that Mrs. Anne Washington, the second, must have died previous to that date.

The will of Henry Brett was probably recorded in England, and its discovery might lead to some further facts. But I would refer such of your readers as would like a view of the documents upon which the statement above is compiled to the forthcoming July number of the *William and Mary College Quarterly Historical Magazine*.

In the letter to Mr. Brock, kindly furnished me, Col. Chester states that "one of his maxims is that there is nothing impossible in genealogy." And the narrative above seems to point that way. What right had John Washington, the ancestor of the Father of his Country, to worry the genealogists in the manner he has done—marry two Annes and

then, surreptitiously, as it were, slip in a third wife between the date and proof of his will?

LYON G. TYLER.

WILLIAMSBURG, VA., May 27, 1895.

A GRIEVANCE.

TO THE EDITOR OF THE NATION:

SIR: I have read with pleasure the favorable notice of the first two parts of my Assyrian-English-German Dictionary in the *Nation* of April 18, 1895, and I beg to say that I have seen thus far nothing but favorable reviews of my book, with one single exception. To this latter I wish to call, in the name of justice, your readers' attention.

Two years ago a young Assyriologist and managing editor of the American *Journal of Semitic Languages* offered himself to me as co-editor of my Dictionary. The offer had to be declined, for reasons apparent to every Assyriologist. Therewith the matter rested for the time being. When, in the early half of September, 1894, the first part of my Dictionary appeared, I noticed at once that, owing to the fact of having read but one proof of the greater part of it, many of my corrections had been executed either not at all or wrongly, and, also, that I had overlooked errors which could not easily be detected in a first proof of so intricate a material as my Dictionary, containing, on every page, hundreds of abbreviations and references, and being, on the whole, pioneer work. At a great financial loss I cancelled the issue at once, and notice was sent by my publishers to all journals that had already received review copies, requesting them to please postpone reviews until the appearance of the revised issue. To this the editors of all those journals agreed with the one exception referred to above. I had personally asked the editors of this journal to postpone review of part i., stating that the original issue had been withdrawn, and the managing editor assured me that no respectable journal would notice this first issue, knowing that a revise was forthcoming. Of course, I relied upon the promise of this gentleman.

The revise of part i. appeared in the early days of January last, and a copy was promptly sent to the editors. Last week—that is, more than four months later—there was published in this *Journal of Semitic Languages* a review not of the revise of part i.—which, by the way, is not noticed at all—but of the original issue, which had been cancelled immediately upon its publication, and notice of which fact had been sent to all journals. The review is ostensibly written by another Assyriologist, who, as my successor in a Western institution, took this opportunity to prove to the outside world his great scientific superiority. Assyriologists, of course, will see at once the cause for this most cold-blooded attack, but the general reader of this Semitic journal, unaware of the facts stated above, will easily be misled. Both editor and reviewer, by the way, are Christian ministers.—Yours respectfully,

W. MUSS-ARNOLT.

CHICAGO, ILL., May 27, 1895.

JURY EXPERIMENTS.

TO THE EDITOR OF THE NATION:

SIR: The provision in the proposed Constitution of Utah for trials by juries of less than twelve, and for the finding of verdicts by a less number than the whole, is not entirely novel. The present Constitution of Louisiana, adopted in 1879, provides, "in cases where the penalty is not necessarily imprisonment at hard labor or death, the General Assembly may provide for the trial thereof by a jury less than twelve in number"; in civil cases the number of jurors is twelve, but the General Assembly "may provide that a verdict be rendered by the concurrence of a less number than the whole." To carry out these constitutional provisions the Legislature of 1880 passed two acts—in the one, providing that, "for the trial of all criminal cases where the penalty is not necessarily imprisonment at hard labor or death, said trial shall be before a jury composed of five persons; *provided*, that the accused may waive trial by jury and be tried by the court"; the other act of 1880 provides that in civil cases a verdict may be found by nine jurors.—Very respectfully,

ROBERT H. MARX.

NEW ORLEANS, May 29, 1895.

Notes.

A VOLUME of essays by Prof. Edward Dowden, 'New Studies in Literature,' and a translation, fully illustrated, of Dr. Crestos Tsountas's 'The Mycenæan Civilization' are in the press of Houghton, Mifflin & Co.

A photographically illustrated 'Atlas of Fertilisation and Karyokinesis,' by Prof. Edward B. Wilson and Dr. Edward Leaming, is announced by Macmillan & Co., together with 'The Modern Reader's Bible,' "a series of books from the Sacred Scriptures presented in modern literary form," edited by Prof. Richard G. Moulton, of the University of Chicago.

Brentano's will market here the forthcoming (London) '*Times* Atlas,' to be completed in fifteen weekly parts.

Renan's touching and beautiful memorial of his sister, 'Ma Sœur Henriette,' has hitherto been known rather by its reputation than from actual knowledge. Some parts of it have been given to readers by one periodical or another, but the book itself has been very difficult to obtain. Only ninety-nine copies of it were printed, and these were given away to intimate friends and have been objects of pious care. On the few occasions when a copy has figured at a book-sale it has brought four or five hundred francs. A new edition of the volume will be published during the present month with illustrations by M. Ary Renan.

M. Paul Mariéton has in press a new work on the literary history of the Midi entitled 'Histoire d'une Renaissance'—the genesis of the Félibrige. It comprehends the epoch just previous to the Félibrige properly so called, and treats of its great forerunners, La Bellaudière, Saboly, Goudelin, the Abbé Favié, as well as such immediate predecessors as Jasmin and Roumanille. The book closes with the appearance of 'Mireille' in 1854. M. Mariéton is a militant *félibre*, and has already appeared as the author of 'Terre Provençale.'

M. Régnier, sometime a well-known actor, who had played Molière in connection with the chief artists of the century, had the design of annotating, for the use of players, all the works of that great writer. But he died before he had accomplished his task. He left complete no more than his annotations upon "Tartufe," which are now just appearing. The play is preceded by a detailed analysis of each of its characters, and many indications are given of stage traditions of the great actors who have played these rôles, of stage settings, and the like. The volume is entitled 'Le Molière des Comédiens,' and has been edited by Mme. Henriette Régnier, a daughter of the author, and by M. Legouvé.

In 'Der Anekdotenschatz Bacon-Shakspere's,' Edwin Bormann, the Leipzig author-publisher, follows up his 'Shakspere-Geheimniss' with the same scholarly air and capital sense of book-making, but with the same futility. He now passes from Bacon's philosophical works to his 'Apophthegmes New and Old,' and selectively shows how they hark back to "Shakspere's" plays, and so confirm the theory of a single personality and authorship. Where the resemblance in phraseology is close, Mr. Bormann sees Bacon's fondness for analogies; where it is remote and casual, his fondness for antitheses. The following is a fair sample: (Bacon) "Nero was wont to say of his master Seneca, that his stile was like mortar of sand without lime"; ("Midsummer Night's Dream," v. i.) "Would you desire lime and hair to speak better?" Mr. Bormann announces an English translation of his earlier work, 'The Shakspere Secret,' by Harry Brett, to appear early in October.

Brentano's sends us Gustav A. Seyler's 'Illustrirtes Handbuch der Ex-Libris-Kunde' (Berlin: J. A. Stargardt), an agreeable little side-pocket introduction to the fad of the hour, illustrated copiously and with taste, and furnished with lists of Ex-Libris societies, literature, periodicals, collections; designers and engravers of book-plates, etc. With German system Herr Seyler sets forth the various modes of indicating the ownership of a book, in their historical development; and it is well to remember that wood-engraving preceded copper, and may still assert its supremacy if rightly executed. We are taught how to describe a book-plate as to right and left, its dimensions, etc., and what are the conventional engraver's lines in heraldic representation. Our scruples are silenced as to robbing books of their plates, and the mode of despoiling with lukewarm water or alcohol is revealed. Finally, we are shown the different ways in which collections can be arranged.

The various addresses which the Apostolic Delegate, Archbishop Satolli, has delivered in this country, have been collected and published by John Murphy & Co., Baltimore, under the title, 'Loyalty to Church and State.'

Two valuable compilations of laws relating to the "labor question" are before us. The smaller and more practical (published by Macmillan) is by the well-known writer upon trade-unions, George Howell, M. P., and is nominally a new edition of his 'Handy-Book of the Labor Laws,' which appeared in 1876. But there has been so much important legislation since then, and so many decisions have been made by the courts upon the numerous statutes affecting employers and workmen, that this work consists to a large extent of new matter. The aim of the author is to furnish workmen with a manual of their statutory rights and privileges, and of rules and forms to be observed in maintaining them. The book is very well adapted for its purpose, and is interesting as showing the progress made during the last thirty years in removing legal disabilities from workmen and transferring them, to some extent, to their employers.

Much more comprehensive is the 'Lois Sociales' of MM. Joseph Chailley-Bert and Arthur Fontaine (Paris: Léon Chailley). This is nothing less than a digest of the laws of France bearing upon the social condition of its inhabitants. It includes not only the laws now in force, but many that have been repealed, and is, of course, a bulky volume. The method employed is to classify the laws ac-

cording to their subject, and when so classified to present them in chronological order. The great rubrics are: Labor, Providence, Property, and Protection and Assistance. Under the head of Labor we have first a chapter upon the individual, and then a chapter upon associations. The individual is considered with reference to the contract for work, the search for work, holidays and limitations of labor, wages and means of subsistence, credit, controversies, etc. The same systematic method is followed throughout; both chronological and analytical indexes are provided; and, as the start is made from the declaration of the rights of man in 1789 and the abolition of the guilds in 1791, the student is enabled to review the social history of the century to great advantage.

Mrs. Custer's 'Tenting on the Plains,' which we reviewed on its publication by C. L. Webster & Co. in 1888, reappears from the press of the Harpers in the more convenient form of a post-octavo, unaltered except by the omission of a biographical sketch of Gen. Custer and of three chapters of letters, chiefly his. This charming record of a life that can never be reproduced bears reperusal well, and the reader of the army novel whose plot requires intrigue and detraction should enjoy this ingenuous story of real life, unmarred by gossip or the appearance of evil. Mrs. Custer has the happy faculty of painting life with no more shadows, and those only nature's own, than nature requires to bring out the tones; and one may take these frank sketches as almost photographic reproductions of experience in bayou, plain, and cantonment. Her home and her heart are open to the world, but the world can learn from them only lessons of affectionate devotion. It is hardly fair to Kansas to reproduce (p. 221), with the title "Kansas in 1866 and Kansas to-day," a map that was probably true as drawn when the book was written, without explaining that "to-day" has receded nearly a decade. And Texas might object to the maps (p. 19) of "Texas in 1866 and 1886," as implying that there has been no advance in the last nine years. Grasshoppers, drought, and Populism are not the only products of either State; and, despite the plagues of gods and men, the prairie world does not stand still. There was a rumor that Mrs. Custer would cast into shape for print army tales beyond her personal experience; that she was gathering material, if not for a romance, at least for a collection of incidents that might or might not have a common thread. That venture would be a new one, but the demand that led to this reprint should encourage her to consider the project. She has made so many friends through her inartificial books that she may be sure of readers to welcome a fresh one, even on different lines.

For forty years we have witnessed experiments in intercollegiate magazines, and not one has gained a permanent footing or demonstrated its excuse for being, from Joseph Cook's down. We now have the *Bachelor of Arts*, published at 15 Wall Street, under the editorship of John Seymour Wood. Twenty-five colleges furnish forth a formidable "Advisory Board." The form we cannot think well chosen, being slab-sided as if for the pocket. Besides the contributed articles, there are regular "Comments on University News," edited by Edward S. Martin, to which it seems appropriate to give a humorous cast; and an "Athletic Department," edited by Walter Camp. Book notices bring up the rear, and are unsigned. We reserve further comment. We have found most interesting the unfinished article, "An American Collegian at Oxford," by John Corbin, and Mrs. Mabel Loomis Todd's excerpts from Emily Dickinson's prose and verse.

England is such an old, variously settled, and long-undisturbed country that it is especially rich in archæological interests. Among these are Deneholes, concerning which there is an interesting illustrated article in the April number of the *Reliquary* (London: Bemrose). The origin of these curious shafts and chambers sunk in the chalk formation (more especially in the valley of the Thames) is still shrouded in mystery. No reasonable theory has been put forward as to their origin and use. They date back possibly to the period of the Roman occupation of Britain. Camden, in the first English edition of his 'Britannia,' published in 1610, furnishes a rude illustration, and remarks, in connection with Tilbury fort: "Neere unto this place, there bee certaine holes, in the rising of a chalky hill, sunke into the ground tenne fathoms deepe, the mouth whereof is but narrowe, . . . but within they are large and spacious." The Essex Field Club has done good work in excavating and exploring those indicated by Camden, situated within a mile and a half of Grays, which is but an hour's railroad journey from London. It is well to add that without previous arrangement there are no means of descending or exploring.

The latest number of Petermann's *Mitteilungen* contains a summary of the newest hydrographic researches in the Baltic Sea, and a report from Dr. Sven Hedin of his recent exploration of the little Kara-kul lake in the Pamir. It derives its name, "Black Lake," from the fact that, on account of the wind, its surface is rarely covered with snow. The ice, as well as the water, is extraordinarily clear, and the weeds on the bottom at a depth of seventy feet can be plainly seen. The Kirghiz say that "the stars sparkle in it at night as in the heavens themselves." Dr. Karl Dove treats of the water-supply of German southwest Africa.

A recent number of the Danish *Geografiske Tids-skrift* contains an account of an expedition that was to leave Copenhagen early in May for the purpose of investigating the shores of Greenland. A liberal appropriation has been made by the *Rigsdag*, which will also cover the expense of a second voyage next summer, the climatic conditions limiting the work to four months. Besides the usual crew and officers, the party will consist of three zoölogists, a botanist, and a chemist. As one result of the enterprise, it is hoped that sufficient material will be collected to insure the publication of the 'Conspectus Faunæ Groenlandicæ,' now in preparation. Attention will be directed chiefly towards Davis Strait and Baffin's Bay.

On or before May 1, 1896, essays of original research in competition for a prize of $200 must be sent in anonymously to the President of Brown University. The themes are (1) a critical comparison of the claims of Rhode Island and Maryland respectively to precedence in establishing religious liberty in America; (2) a critical history of the movement towards disestablishment and religious liberty in Connecticut, and (3) Massachusetts. The prize will be awarded at Commencement, 1896. The giver is a friend of the University.

A friend and alumnus of the Chauncy Hall School, Boston, has recently offered seventy-five volumes of Shakspere as prizes to the pupils for memorizing the works of that poet. At least a thousand lines must be committed to entitle one to the first prize. If the experiment proves a success, the prize will be renewed, either at the same school or at others.

A timely addition to the "Old South Leaflets" (Boston) is 'The Monroe Doctrine,' making No. 56. The form is handy, and the appended notes exhaust the subject bibliographically.

—Mr. Humphry Ward, if we may go behind his anonymity, has written from New York a letter to the London *Times* with regard to American museums, which appeared on April 22, and in which some sound conclusions are mingled with mistakes in detail. It is stated that "the galleries owe their origin to the benefaction of some private collector, who leaves his pictures to the town, with money to provide a building." Then comes the remark about the trustees, that they are appointed as "friends of the family"; and although this, like the statement above, is only now and then true, what follows is of general application. These trustees are chosen, Mr. Ward thinks, "because they are prominent citizens, and not because they know anything about art." Moreover, "with a body of this sort the choice of new objects is apt to be of a somewhat nondescript kind. . . . We in Europe have long since discovered that the only way . . . is to appoint a really qualified man as director . . . and to fetter his discretion as little as possible. It is in this way that the National Gallery was raised by Sir Frederic Burton from a second-rate to a first rate position, and it is in this way that the Berlin Gallery, under Dr. Bode, has rapidly become its rival." An American who has watched the museums of his own country would be apt to say that purchase by opportunity has been the rule followed. A collection of porcelains, of engravings, or of ancient glass, a private gallery of old or modern pictures, is offered for sale. For some reason this particular opportunity excites interest; some money is offered towards its purchase provided more can be raised, and the remainder is raised by personal appeal. Other, generally smaller, collections are presented in single gifts. In this way of course the opportunities lost are apt to be fully as important as those improved, and if the complete record of any American museum could be made up, and the might-have-been compared with what is, the reading of it would surprise the more instructed public. Seldom has it been the case that a given work of art or a collection has been purchased deliberately and because it was felt to be the thing most needed. Never, it is safe to say, has an American museum raised any considerable fund and expended it with deliberation in buying as a thoroughly well-informed citizen would buy for himself. The apparent exceptions are those cases in which a definite sum has been set aside for the preliminary purchasing, and that sum put into the hands of a competent expert, as when Mr. Edward Robinson was employed to buy for the Slater Museum at Norwich.

—Mr. Ward calls attention to the Boston Museum of Fine Arts as being fortunate in having experts in charge of two of its departments—Mr. Robinson, above named, for classical antiquities, and, for Japanese art, Messrs. E. F. Fenollosa and E. S. Morse. It is an oversight that the sympathetic and devoted man who fills the place of director should not have been named. Mr. Charles G. Loring is not exactly an archæologist nor an expert in any one branch of fine art, but he is what is more needed in a place like his, a man with a

catholic taste, a hearty and reverential love for the works of art in his charge, and with a wide knowledge and sound judgment as to the field from which other works of art are to be drawn. As regards the New York Metropolitan Museum of Art, the account of its foundation and its singular relations with the city authorities is fairly correct. No very marked error occurs except the mention among the founders of the museum of two gentlemen who had nothing to do with it, and were named probably because they were well-known New Yorkers twenty years ago. The pictures, as a whole, are well characterized, the important ones chosen out for mention with good judgment, and, except that Mr. Ward thinks less of the "large and expensive casts and models" than the committees in charge would approve, the collections other than pictures are also well described. Especially just is the statement that in general the American collector of "Orientals" has gone straight to China and Japan, and has found his treasures "in the houses of the mandarins and the daimios, whose taste has always been different from that of the European collector, and, we may fairly say, purer."

—In the course of an article in the May number of the *Rundschau*, Herman Grimm makes some interesting comments upon the spirit of the age. The paramount value which attaches to the present moment he regards as the most striking characteristic of our time. We are absorbed in the life which we and our contemporaries are living; the past has lost its power to hold us; we are concerned only with what is new and alive, discarding the old and outlived; and the newspaper, as the purveyor of novelty and the universal means of communication between men, has become the chief factor in the machinery of modern civilization. "An irresistible impulse to feel free from the conditions which the past imposes" has seized upon Grimm himself; and the author of the 'Life of Michael Angelo' admits that he is no longer able to interest himself in the study of the past. Others, he says, have confessed to a similar experience. The forms of those elder times are fading; only a few, Christ, Homer, Shakspere, Goethe, still retain their outlines, for these have their being in an "everlasting now." "It is as if we had suddenly been transported into a new existence and had been permitted to take only our handluggage with us." The hatred with which Socialists look upon history, the resentment with which young writers of the Ibsen stamp regard other forms of literature, and the contempt which the secessionists feel for the older schools of painting, are all the products of this spirit. Much laborious burrowing is still going on among the dust-heaps of antiquity, but the faith of the public in the magic power of these things is gone; in Grimm's opinion, antiquarian research leads to nothing but the storing up of the "eternal-fragmentary." What we demand to-day is the new and novel; and we do not ask that it be great and good. The newspapers meet this demand; "they march at the head of our literary progress." These are strange words from that classic pen, and they seem to have been written without resentment or regret. They are the dispassionate statement of what the writer sees going on about him and reacting upon himself. He sees the past behind him wrapped in silence and studded with gravestones, and upon the palace of the Present he would inscribe the words of Bürger:

"Ach, lass sie ruh'n die Todten!"

—The centenary of the Paris École Normale Supérieure furnishes the occasion for the publication, by that institution, of a work which will contain, among other matter, the history of the 'École Normale de l'an III.,' by M. Paul Dupuy, favorably known by previous contributions to the history of that famous school, and notably by his volume entitled, 'L'École Normale (1810-1883): Notice historique, Liste des Élèves par promotions, Travaux littéraires et scientifiques.' M. Dupuy's latest researches have been in the direction of the origin and character of the idea leading to the foundation of the Paris Normal School by the decree of the Convention of the 9th Brumaire, An III. (October 30, 1794), and they will manifestly enrich the history of education with a chapter of more than ordinary interest. The idea of providing an institution for the training of principals and teachers for secondary schools had occupied the University as early as 1645; it had been resumed by the Parlement of Paris in 1761, after the expulsion of the Jesuits, and by the Church in 1780. Through educational reformers like Barletti de Saint-Paul and Bernardin de Saint-Pierre, it had been brought to the notice of the Government of the Revolution. But a far more important and effective impulse came from Alsace, and, through Alsace, from Germany. The account of this predominating influence of Alsace—"the only province of ante-revolutionary France able to furnish ideas and models" for popular instruction—in the history of the foundation of the École Normale is given in the section of M. Dupuy's work now published in advance in the *Revue Internationale de l'Enseignement* for April. Many data, supported by documentary evidence, leave no doubt of the fact which the author seeks to establish. In July, 1793, during the discussion of a plan submitted by Robespierre, the idea and the name of *écoles normales pour former des instituteurs* were put forward. The law by which, in the following year, the Paris École Normale was established, provided that its students should go out and open other normal schools in the departments, just as the École des Armes sent its graduates from the *cours pour les poudres et salpêtres* back into their districts, there to organize manufactures of arms and gunpowder—two applications of the revolutionary method created by the Committee of Public Welfare. "The famous École des Armes was the real prototype of the École Normale."

—Dr. Joseph Edkins of China, the veteran scholar in the comparative philology of the Far East, contributes to the *Japan Mail* of March 30 a valuable paper on "The Origin of the Japanese." He gives the results of a searching study and wide comparison of the words used for numbers. The principle upon which he proceeds is that close resemblances are likely to be accidental, while slight resemblances are likely to be real. Between the Ainos and the Japanese the ten cardinal numbers differ so widely that we are forced to seek for kindred names of number on the Continent. Giving results and omitting details of processes, we find Dr. Edkins identifying the Japanese and Turkish words for one, four, seven, and nine, as of the same root and branch. He sums up his philological argument by concluding that at one time the Japanese were nomads in Siberia, and neighbors to the Turks and Mongols. Only after they reached "Nippon [Hondo]" and Kiushiu did they become acquainted with the Chinese. The sources of the contrariness between the Chinese and the Japanese are to be sought in the choice of a settled agricultural life by the one, and by the other of nomadic freedom. Dr. Edkins thinks it is quite possible to discover where the Japanese lived before they conquered the islands in which they now live. He urges that the scientific and comparative method be applied to the mythology and legends of both insulars and continentals.

—In primeval days, when the Japanese were far away in the north among the Tatar races, they, though remote from China, were sufficiently near the Indo-Germanic peoples to allow of and account for the rather large admixture of words common to the European and Japanese vocabularies. Dr. Edkins, in reasserting this fact, already known to students of the Japanese and the languages allied to or derivative from Sanskrit, refers, of course, to the old terms. A native writer, Mr. S. Fuzita, in *Shinri*, a Tokyo monthly magazine of scientific theology and philosophy, for March, 1895, discusses the modern phases of the subject. In his paper, "The European Elements in the Japanese Vocabulary," he gives a surprisingly large number of exotics which have become thoroughly domesticated. Omitting those words inherited from the sixteenth-century Portuguese and Spanish missionaries, and recently introduced Christian and theological terms, we note the wide range of the borrowing. The Dutch, Russian, and French, in their order, contribute the greater number of the contingent of expressions not taken from the English, which latter furnishes both single words and phrases. Noticeable is the proportion of words beginning with *g*, an initial letter rarely found in pure Japanese vocables; with *l*, a letter, or rather a sign-sound, unknown in the native syllabary; and *p*, which, as a rule, commences only onomatopes. We select a few of the new elements of Japanese conversation and ordinary public discourse: Bucket, butter, baby, beef, cheese, chair, influenza, ink, handkerchief, jam, ginger beer, halt, flag, cabbage, cholera, match, milk, napkin, overcoat, omelette, all right, organ, lemonade, ribbon, sandwich, sausage, cigar, cigarette, seat, stew, curry, soda, soap, soup, tobacco, violin, arch, ice-cream, etc., etc. The tendency to variety in pronunciation and spelling is corrected by the standard *kana* transliteration of the Tokyo newspapers and magazines.

—A century of existence for any institution west of the Alleghenies is a long period, and the University of Tennessee could claim this last year only by overlooking a period of suspended animation in 1808–1820, as we make out from Mr. Edward T. Sanford's interesting historical address just published by the University. The original Blount College was founded in Knoxville in the midst of Indian alarms, as, to compare small things with great, the University of Berlin was founded during Prussia's abasement to Napoleon's conquering arms; but Mr. Sanford does not fail to point out that in a slaveholding society there was no substratum of public schools for the higher education to rest upon. He has a hard task in defending the dealings of the founders and their fellow-squatters with the Indians; but the bad faith by which the college profited in the beginning was avenged by the perfidy that marked the State's execution of its pledge to Congress to endow the college with lands. Blount College, which nearly perished on being made East Tennessee College in 1807, was rescued from the grave by a union with the younger Hampden-Sidney Academy in

1820, under the new name; in 1840 it was magnified into a university, still local; in 1869 the State made it the beneficiary of the Congressional land grant for the founding of an Agricultural College, but with onerous conditions and without a particle of State aid, and even with a mean deduction from the fund of the expenses attending the sale of the scrip, as well as a dishonest failure to preserve inviolate the interest on the fund derived from the proceeds. In fact, Mr. Sanford's address is chiefly valuable as a contribution to the history of a too notorious trait of Southern character in the treatment of solemn public obligations, especially pecuniary. In 1879, the institution became the State University, and, in 1893, following the example of similar foundations, admitted women to its teachings, as Blount College had begun by doing.

COLERIDGE AS A LETTER-WRITER.

Letters of Samuel Taylor Coleridge. Edited by Ernest Hartley Coleridge. 2 vols., with portraits. Boston: Houghton, Mifflin & Co. 1895.

It is not the fault of the editor if these letters are somewhat disappointing, as, for the most part, we must confess they are. There are interesting and touching passages, but they bear a small proportion to the mass, and these two portly volumes are rather materials for a biography than pleasant reading in themselves. Coleridge has no personal worshippers and few philosophical worshippers left to care for the commonplace details of his life. Literary form or grace the letters have none. Considering his indolence, Coleridge seems to have been a most voluminous correspondent, but with the possible exception of the five autobiographical letters addressed to Thomas Poole, none of the letters can have been intended for publication. The character of the writer, however, appears plainly enough, and we once more smile at the comical contrast between the magisterial morality of the philosopher and the pitiable weakness of the man. Coleridge, at all events, understood himself and his own mental history.

"So," he says, referring to his early love of fairy-tales and ghost-stories, "I became a dreamer and acquired an indisposition to all bodily activity; and I was fretful and inordinately passionate; and as I could not play at anything and was slothful, I was despised and hated by the boys; and because I could read and spell and had, I may truly say, a memory and understanding forced into almost unnatural ripeness, I was flattered and wondered at by all the old women."

From his childhood his mind had "been habituated to the Vast," and he "never regarded his senses in any way as the criteria of his belief." He would see armies of ugly spectres rushing upon him, and his good angel keeping them off. The man of whom this boy was the father might well in after-life reply to a lady who had asked him whether he believed in ghosts, "No, madam, I have seen too many of them."

Here is a piece of frank self-portraiture:

"As to me, my face, unless when animated by immediate eloquence, expresses great sloth, and great, indeed, almost idiotic good nature. 'Tis a mere carcass of a face: fat, flabby, and expressive chiefly of inexpression. Yet I am told that my eyes, eyebrows, and forehead are physiognomically good; but of this the deponent knoweth not. As to my shape, 'tis a good shape enough if measured, but my gait is awkward, and the walk of the whole man indicates *indolence capable of energies.* I am, and ever have been, a great reader, and have read almost everything—a library cormorant. I am *deep* in all out-of-the-way books, whether of the monkish times or of the puritanical era. I have read and digested most of the historical writers; but I do not *like* history. Metaphysics and poetry and 'facts of mind'—that is, accounts of all the strange phantasms that ever possessed 'your philosophy'; dreamers, from Thoth the Egyptian to Taylor the English pagan, are my darling studies. In short, I seldom read except to amuse myself, and I am almost always reading. Of useful knowledge, I am a so-so chemist, and I love chemistry. All else is *blank*; but I *will* be (please God) an horticulturist and a farmer. I compose very little, and I absolutely hate composition; and such is my dislike that even a sense of duty is sometimes too weak to overpower it.

"I cannot breathe through my nose. So my mouth, with sensual thick lips, is almost always open. In conversation I am impassioned, and oppose what I deem error with an eagerness which is often mistaken for personal asperity; but I am ever so swallowed up in the *thing* that I perfectly forget my *opponent.*"

We looked with interest for some confirmation of Lamb's picture of the inspired charity boy at Christ's Hospital unfolding to the casual passer through the cloisters, who stood entranced to hear, the mysteries of Jamblichus or Plotinus. But we find none, and that figure must be relegated to the delightful dreamland of Elia. The letters tell us little about Christ's Hospital; they tell us more about Cambridge, where we behold the sage sitting down to dinner in the college hall "in silence except the noise of suction which accompanies his eating," and rising in silence as he sat down. With Cambridge, too, is connected the farcical episode of the enlistment of "Silas Tomkyn Comberbacke" in G Troop of the Fifteenth or King's Regiment of Light Dragoons. The officers seem to have been wonderfully kind to their amazing recruit. They detailed Silas to take care of a sick comrade, thinking that to this his valor and horsemanship were equal, though it would be interesting to know the sick comrade's report of his nurse. Captain Ogle, who was himself well educated, talks to Silas whenever he comes to the stables, and sends him wine when he is sick. Silas has also the luck to find in the pot-house where he is quartered a man, surely not a dragoon, "of the greatest information and the most original genius he ever lit upon," who keeps him awake till three in the morning with ontological disquisitions.

Of the Pantisocratic episode we also get a good deal, and once more laugh at the contrast between the magnificence of the vision and the childish helplessness of the visionary as soon as he essays to take the first step towards practical fulfilment. He records with pleasure that "Lushington and Edwards have declared the system impregnable, supposing the assigned quantum of virtue and genius in the first individuals." We can faintly trace in the letters the progress of the philosopher from necessarianism (going the length of the belief that thought is corporeal) and Pantisocracy to Christianity and Toryism, or at least hearty sympathy with the war against the Revolution. "I have snapped," says the ex-Revolutionist, "my squeaking baby-trumpet of sedition, and the fragments lie scattered in the lumber-room of penitence." In a letter to John Thelwall, who had decried Christianity as a mean religion, there is a long passage in Coleridge's best style to which Christian apologists may refer with advantage.

Meantime Coleridge had to choose his line in life and determine how he was to make his bread. What he would have preferred would be, "like the Indian Vishnu, to float about in an infinite ocean, cradled in the flower of the lotus, and wake once in a million years for a few minutes just to know that he was going to sleep a million years more." He protested against being set to keep a school or write for a newspaper. The man who advised him to do either of these two things "he could not love." Nor, we shrewdly suspect, would either the pupils of the school or the editor of the newspaper have had reason to love that man. To become a Unitarian minister, he finally resolved, was a less evil than starvation. There was no need to starve, at all events when an annuity had been given him by the Wedgwoods, if he could only, like Southey, have buckled down steadily to literary work. He could form elaborate plans for a literary life, but they remained unfinished, like "Christabel" and "Kubla Khan." All his speculations are fine, but the practice never corresponds to the speculation. Here is the programme for dealing with differences of opinion:

"I have laid down for myself two maxims, and, what is more, I am in the habit of regulating myself by them. With regard to others, I never controvert opinions except after some intimacy, and when alone with the person, and at the happy time when we both seem awake to our own fallibility, and then I rather state my reasons than argue against his. In general conversation to find out the opinions common to us, or at least the subjects on which difference of opinion creates no uneasiness, such as novels, poetry, natural scenery, local anecdotes, and (in a serious mood and with serious men) the general evidences of our religion. With regard to myself, it is my habit, on whatever subject I think, to endeavor to discover all the good that has resulted from it, that does result, or that can result. To this I bind down my mind, and, after long meditation in this tract, slowly and gradually make up my opinions on the quantity and nature of the evil. I consider this as the most important rule for the regulation of the intellect and the affections, as the only means of preventing the passions from turning reason into a hired advocate."

Nothing can be more admirable. But presently we have a narrative of an encounter with Godwin:

"I was disgusted at heart with the grossness and vulgar insanocecity of this dim-headed pig of a philosophocide, when, after supper, his ill stars impelled him to renew the contest. I begged him not to goad me, for that I feared my feelings would not long remain in my power. He (to my wonder and indignation) persisted (I had not deciphered the cause), and then, as he well said, I did 'thunder and lighten at him' with a vengeance for more than an hour and a half. Every effort of self-defence only made him more ridiculous. If I had been Truth in person, I could not have spoken more accurately; but it was Truth in a war-chariot, drawn by the three Furies, and the reins had slipped out of the goddess's hands! . . . Yet he did not absolutely give way till that stinging *contrast* which I drew between him as a man, as a writer, and a benefactor of society, and those of whom he had spoken so irreverently. In short, I suspect that I seldom, at any time and for so great a length of time, so continuously displayed so much power, and do hope and trust that never did I display one-half the scorn and ferocity."

It is true that, before the meeting with Godwin, Mary Lamb had made Coleridge "a glass of punch of most deceitful strength," and that he wrote "an affecting and eloquent" letter as apology next morning.

On the close, darkness descends out of which cries of moral agony are heard.

RECENT ENGLISH POETRY.

Some twenty years ago, in the "greenery-yallery" stage of the Grosvenor Gallery in London, it was visited by wandering Americans as a change from the smug proprieties of the

Academy, though they often sought the latter temple of order again, as a change from the Grosvenor. In the latest English poetry, even in that which comes from the Bodley Head and the very headquarters of the *Yellow Book*, we see a reaction towards the standards of the Academy. It is well known that people sooner grow surfeited of the bizarre than even of the tame; and just now the Bodley Head is plainly disposed to forswear sack for a while, and live cleanly. The temporary outcome is, of course, commonplace. Lord de Tabley's new book, for instance, the second series of 'Poems, Dramatic and Lyrical' (London: Lane), has nothing in it to compare to the "Two Old Kings" of his former volume, and is not only tame in substance, but turgid. He transmutes Shakspere's *Cleopatra*, for instance, into this conventional and made-up creature (p. 8):

"So when proud Egypt in her fleet
Beat up, with canvas all unfurled,
Inflamed with Mœreotic heat,
To wreck the realm and clutch the world:

"Drunk with the wine of prosperous hours,
Insane to hope the wildest good,
She, queenly crowned with lotus-flowers,
Swept silken-sailed across the flood;

"Came with mosquito-nets, and came
With eunuchs, a decrepit band,
While, doting at her apron, tame,
The great triumvir gave command.

"But when she saw her burning ships
And heard the roaring of the fire,
The wanton paled her painted lips
And fled the falcon Cæsar's ire."

Probably there is no better safeguard against bad taste, for poet or common man, than an adequate sense of the ludicrous. In this Lord de Tabley seems deficient. The want seems also shared by Mr. Matthew Hunt, author of 'The King's Daughter, and Other Poems' (Stock), or he would not have risked a verse like this (p. 7):

"Luscious-scented honeysuckle
Straggles o'er the hedge,
Bulrush black and hard to pluck 'll
Hide the water-hen whose chuckle
Comes from out the sedge;
Marigold a loveless luck 'll
Bring to those that falsely pledge."

Mr. Arthur Christopher Benson, more guardedly, places at the head of his 'Lyrics' (Lane) some verses called "A Canticle of Common Things," and adheres manfully to his text. Yet his tone is good, and he gives us the satisfaction of choosing some unfamiliar themes, as water-newts and sky-rockets. This is perhaps the most graceful of his lays (p. 6):

AT TAN-YR-ALLT

Feathery woodlands, falling, dipping,
Down from the height to the river's edge:
Voice of the rivulet, dashing, dripping,
Crevice by crevice, ledge upon ledge;
Lawns high-sloping and sunlit spaces,
Glades that glimmer from crag to plain,
Shy unvisited secret places,
See, I fall at your feet again!

Voice of summer, delaying, coming,
Thrushes piping in bush and brake,
Bees round feathery catkins humming,
Buds that slumber and fear to wake;
Frail anemones, airy, slender,
Stars engendered of wind and dew,
Celandines faithful, violets tender,
Oh, to be worthy to sing of you!

Even this, it must be owned, ends tamely. Mr. Benson, who is an instructor at Eton College, dedicates his volume to Mr. Edmund Gosse. Mr. Gosse himself, who, out of all his various languages and literatures, has never yet extracted one really impressive or haunting poem, gives us in this volume, 'In Russet and Silver' (Chicago: Stone & Kindall), nothing else so felicitous as the title and the binding. Both these are effective; but he translates from the Dutch, the Swedish, and the Spanish, with the usual tame result, and imitates the Elizabethan lyrists and masquers without once catching their note. His meditations on his own advancing years are perhaps as much in earnest as anything he writes, but are scarcely attuned to music (p. 4):

"So, not forgetful of the past,
Nor sulking that it did not last:
Rememb'ring, like a song's lost notes,
The gleaming husks of my wild oats;

"Not, priggish, glorying in a boast
That I have never lov'd nor lost;
Not, puritanic, with a flail
Destroying others' cakes and ale:

"But, with new aims and hopes, prepare
To love earth less and more haunt air:
And be as thankful as I can
To miss the beast that harries man."

Mr. William Watson's new volume, 'Odes and Other Poems' (Macmillan), contains a poem addressed to Mr. Benson as a brother bard. Mr. Watson's muse is one of those painfully checked by publicity; he promised at first a clearer and simpler note than his fellows, and one still detects the flavor of Wordsworth and sometimes of Matthew Arnold. But, like the latter, he is academic; and there is no such stress of culture and of experience as that which forced itself through Arnold's natural restraints. Watson is placid and jejune; he never repels, but he does not kindle.

A placid evenness is what one always expects from the patient literary workman, Mr. Alfred Austin, and his 'Madonna's Child' (Macmillan)—a reprint of the second act of "The Human Tragedy"—forms no exception to his literary record. It contains, however, some pleasing Italian descriptions. The volume of 'Poems,' by John Devenish Hoppus (Bentley), is published by a sister, the well-known novelist Mrs. Alfred Marks, in memory of a brother who died fifteen years ago, a young medical student, to whom she attributes an intense earnestness and mental activity which are not, perhaps, fully represented in these verses. The most imaginative among them is the "Doch-an-Dorrach," or death-song (p. 75), which might well have prefigured his own departing. 'A Book of Words, reprinted in part from *Punch*, by A. A. S., editor and translator of "The Inspector-General" (a Russian comedy), with a few sketches by the Author' (Constable), is one of those laborious English collections of the flattest rhythmic jokes, worthy only of the dance-hall in quality and wholly exhausting to the feeblest American mind. There is plenty of rattling pun and ready rhyming; and yet "the heart misdoubting asks, Can this be joy?" Perhaps as good a joke as any is the transmutation of Whit Monday into Whit-manday—"A Bank-Holiday Impression," followed by dithyrambics which begin as follows (p. 103):

"Starting from my diggings near the Circus, where I keep,
Over an Aerated Bread Shop (which people who ought to know better will persist in calling Areated),
Now this Fourteenth of May, Eighteen-Hundred-and-Ninety-four, having put on my last season's top-hat and my grey striped nether-garments, unmentionable, but in fairly good repair, and not yet frayed at the edges,
(Camerado, whoever you are, I care not, I take you by the button-hole, I chant in your ear this poem of details, I insist on your listening to these personal details, I dig you in the ribs. Libertad for ever!)
Aware of the fact that this is Bank Holiday,
Aware of the fact that the place is chockfull of 'Arries and 'Arriets, two and two, but occasionally ten in a row. . . ."

'Rhymes of Rajputana,' by Col. G. H. Trevor, C. S. I., agent to the Governor-General of Rajputana (Macmillan), is a stately volume of Indian poems and lyrics, with a good deal that is interesting—in the notes. The verses themselves are so much less effective than those drawn from the same sources by Sir Edwin Arnold, or even by Kipling, that they have little positive worth; and there is a constant dipping into so-called Americanisms which would of itself be sufficient to show that their author, whatever else he may be, is clearly not an American. Thus, the following epistle, supposed to be written in 1764 by Raja Gaj Singh of Bikanis (p. 91):

"We little thought my friend our host
Was fooling us with elephant fights
And fountains playing, feasts and sights,
And dancing girls. What riles me most
Is—not the time in waiting lost
To hear if he would send his aid
To guard your fort against the raid
Of those Mahrattas who are round it
And growing much too strong, confound it!"

Much more serious and thoughtful, while also Oriental in spirit, is 'Homeward Songs by the Way,' by A. E. (Portland: Mosher), a little volume reprinted from a Dublin edition. The preface says: "I moved among men and places, and in living I learned the truth at last. I know I am a spirit, and that I went forth in old time from the Self-ancestral to labors yet unaccomplished; but filled ever and again with homesickness I made these songs by the way." The poems have the mystic and sometimes incomprehensible quality that one might expect from such an origin. The best are those which were apparently produced during some stage of being in Hindostan.

'In a Garden, and Other Poems,' by the Rev. H. C. Beeching (London: Lane; New York: Macmillan), is another of the books that may be regarded by the publisher of Beardsley and of Wilde as a propitiation to the demurer public. Some of the poems are, indeed, avowedly religious, and may be the object of derision among the younger swaggerers who fiercely curl their moustaches and defy all that is *bourgeois*, around the approaches to the Bodley Head. The publisher himself seems bound to offer a like atonement to these darker and more heroic spirits, for he has put upon the title-page a strangely funereal and Beardsley-ish approach to Mr. Beeching's otherwise cheerful garden. Nor can the fruits of this horticulture be regarded, in truth, as highly flavored; but the transplantations from the garden of Hellas, in the form of translations, are excellent.

In 'The Mummer, and Other Poems,' by Henry Gaëlyn (London: Stock), the title-poem has strength, but the best thing in the volume is this vigorous sermon on a Shakspere text:

"That land of such dear souls, that dear, dear land" (p. 17):

"O, England, God hath given thee quiet years,
And plenty, and great vantage, and wide sway;
But now dark clouds are closing round thy way,
And all that love thee are beset with fears;
Dreading to see thee humbled and in tears,
To hungry nations fallen an easy prey:
Most lamentable in thy swift decay,
A laughing-stock where once thou hadst no peers.

"Remember all thou holdest in thy hand.
Be vigilant, be strong, spare not thy store,
Nor yet with treacherous calms be thou beguiled.
A foeman's foot upon thy virgin shore
Would stamp thee ever as a thing defiled,
O land of such dear souls, O, dear, dear land!"

It certainly must be counted to the credit of the "Bodley Head" publishers that they have printed, in 'A Little Child's Wreath,' by Elizabeth Rachel Chapman (London: Mathews & Lane; New York: Dodd, Mead & Co.), one of the most exquisite tributes ever paid by a mother's heart to the memory of a child. Mrs. Chapman calls herself "author of a companion to In Memoriam"; but this book is itself an In Memoriam of childhood, giving in a sequence of sonnets some faint reflection of that wonderful range of thought and cadence which made the elder and greater book an era in many sorrowing lives. Rising by varied steps above the personal anguish, she strikes at last a note so high as the following (No. xxxvii, p. 38):

Yea, lonely still and evermore without,
Shamed and forgotten by the weed-grown door,
Standeth the Christ, while rings the battle-shout,
While statesmen wrangle and while madmen roar,

Spurned is the lord of peace, his message spurned
As when his people thorns for solace gave;
As when Servetus or when Cranmer burned,
Or England dared to side against the slave.

Hark, from the savage wilds they go to tame,
Hark, what discordant sounds affront the ear!
His very priests, contending in his name,
Make it a thing of hate and scorn and fear.

Only the child his loving liegeman is,
And lays a timid hand, consoled, in his.

The most refreshing break that occurs, however, among these rather monotonous English voices, is from that Celtic muse which we have before now pointed out as the healthiest and purest source of contemporary British literature. The note, the themes, the very localities which appear in Lionel Johnson's 'Poems' (London: Mathews; Boston: Copeland) afford a relief from much in the recent London tone. The author is, like Ernest Rhys, Welsh-born and English-bred; he boasts himself a "Wykehamist" of Winchester College; he takes pride in 'England's Excellence' as enough for him (p. 33). Yet his talk is of Tara and Inisfail; of Rhual and Clywyd. His lyric verses suggest that fresh cadence brought by Bliss Carman from Canada, and they might sometimes be mistaken for those of the younger poet (p. 17):

"Sea-gulls, wheeling, swooping, crying,
Crying over Maes Garmon's side!
Cold is the wind for your white wings flying;
Cold and dim is our gray spring-tide."

But the English poet is much maturer; he has, moreover, a vast array of friends, to one of whom he inscribes each poem, as becomes a member of the Rhymers' Club; he is a Roman Catholic, and, besides all this, one of the still undiscouraged worshippers of the soiled Parnell. But he is most inspired when he puts into verse the purely Celtic quality, as in this (p. 41):

"TO WEEP IRISH."

(To the Rev. Dr. William Barry.)

Long Irish melancholy of lament,
Voice of the sorrow that is on the sea:
Voice of that ancient mourning music sent
From Rama childless: the world wails in thee!

The sadness of all beauty at the heart,
The appealing of all souls unto the skies,
The longing locked in each man's breast apart,
Weep in the melody of thine old cries.

Mother of tears, sweet mother of sad sighs,
All mourners of the world weep Irish, weep
Ever with thee: while burdened time still flies,
Sorrows reach God through thee, and ask for sleep.

And though thine own unsleeping sorrow yet
Live to the end of burdened time, in pain,
Still sing the song of sorrow, and forget
The sorrow, in the solace, of the strain.

It is pleasing to an American to find that the genius of Hawthorne has also reached this young Celto-Englishman, who writes of our fellow-countryman in this fine manner (p. 43):

HAWTHORNE.

(To Walter Allison Phillips.)

Ten years ago I heard, ten have I loved,
Thine haunting voice borne over the waste sea.
Was it thy melancholy spirit moved
Mine, with those gray dreams that invested thee?
Or was it that thy beauty first reproved
The imperfect fancies that looked fair to me?

Thou hast both secrets, for to thee are known
The fatal sorrows binding life and death;
And thou hast found, on winds of passage blown,
That music which is sorrow's perfect breath;
So, all thy beauty takes a solemn tone,
And art is all thy melancholy saith.

Now, therefore, is thy voice abroad for me
When through dark woodlands murmuring sounds make way:
Thy voice, and voices of the sounding sea,
Stir in the branches, as none other may:
All pensive loneliness is full of thee,
And each mysterious, each autumnal day.

Hesperian soul! Well hadst thou in the West
Thine hermitage and meditative place;
In mild, retiring fields thou wast at rest,
Calmed by old winds, touched with aerial grace:
Fields whence old magic simples filled thy breast,
And unforgotten fragrance balmed thy face.

Reminiscences by Thomas M. Clark, D.D., LL.D., Bishop of Rhode Island. T. Whittaker.

Bishop Clark's autobiography will make its most obvious appeal to those personal friends whose name is always legion where we have a man of his genial temper, a character so unascetic, a disposition so friendly to the pleasant side of life. It will appeal with almost equal emphasis to the ecclesiastics of his church, and to all who are interested in its history. Concerning this, as concerning his personal fortunes and achievements, his tone is as different as possible from that of certain other clerical autobiographers who have recently called attention to their unappreciated worth. We do not get the impression of any remarkable engrossment in either theological or practical affairs, and in the text we fail to find the magnificent ecclesiastic who confronts us in the photographic frontispiece. The tone throughout is rather secular than ecclesiastical, the insistence more on what is simply human and manly than on what is formal and official, the admiration of the writer going out to men less in proportion to their theological soundness or clerical efficiency than in proportion to their warmth of sympathy and their instincts of good-fellowship. The concrete aspects of our American development have for him a peculiar fascination. In one of his chapters he gives a partial list of his lectures on lyceum and other platforms, and the general impression we receive is that of a mind extremely practical. One lecture, "The Living Machine," was delivered 350 times. He once detected an aged clergyman preaching a sermon on old age which had been written sixty years before. It would seem that "The Living Machine" must have run about as long. About 1850, heedless of Hosea Biglow's warning, then of recent date, he wrote a prophetic lecture, "The Next Fifty Years." There are not many prophecies in the Old Testament that have been so literally fulfilled. The palace-car and dining-car are there with our electrical street-lighting and lighthouses, the typewriter, and nominally the phonograph, the anticipation not extending to the details of Edison's machine.

If boastfulness is the distinguishing note of loyal churchmanship, Bishop Clark is not a loyal churchman, for boasting is not in his line. He is at no greater pains to make his church appear without blemish than was Dr. McConnell in his 'History of the American Episcopal Church,' published four or five years ago. He speaks of personal religion as something "of which the Episcopal Church in times gone by had no occasion to boast." Of the ministry as he found it in 1835 he has but feeble praise, and his depreciation of the earlier things is no mere background judiciously painted dark in order to bring out the later things into more forcible relief. His optimistic temper helps him to believe that there has been improvement on the whole, but his attitude towards the ritualistic tendency and the multiplication of guilds and other like appendages of the modern church, is rather that of amused endurance than of cordial acquiescence. This lack of absolute engagement, this absence of any high-and-mighty tone, is the more remarkable because Bishop Clark was not to the Episcopalian manner born, but to the Presbyterian, and for the ministry of the Presbyterian Church he was educated at Princeton. He made but brief trial, however, of the Presbyterian ministry. He says: "My entrance into the Episcopal Church was precipitated by consciousness of my unfitness to express in extemporaneous prayer the sentiments of an intelligent congregation whose Christian experience had in a great many cases been matured before I was born." He is more reticent about the other reasons for his change of base, but we are left to infer that the "new terms of communion in other bodies," anti slavery, total abstinence, and so on, made the Episcopal Church attractive for him in comparison, standing as it did "very much aloof from all forms of organization outside her own borders," "undisturbed by any matters pertaining to secular affairs."

The change in this respect has taken place, for the most part, since the war. There is a sign of this in the chapter on the General Convention which met at Richmond in 1859. There was great difficulty in finding a subject for a Pastoral Letter. "Lotteries, card-playing, dancing, horse-racing, and theatrical performances were suggested; but just how to discriminate in dealing with these evils—if they were evils at all—did not appear. . . . The result was the Church was blessed with no Pastoral that year." Bishop Clark was on the Pastoral Committee, and he thinks that "a gentle suggestion of [his] as to the matter of slavery may have tended to produce this result." The trial of John Brown was proceeding at the time, and we have the testimony of another Episcopalian that not a word concerning that "obscene tumult" was spoken in the convention. Bishop Clark's chapter, "The Late War," is equally silent on the subject of slavery. The word does not occur. But the Bishop was an ardent Unionist and an active member of the Sanitary Commission. Consequently he saw something of Lincoln, but his reminiscences of him are unimportant, excepting possibly his mild anger when the Commission was crowding him more than he liked. "It looks to me as if you would like to run this machine," he said.

Before attaining to the bishopric, Dr. Clark resided in Boston, in Hartford, and in Philadelphia, and he has written much more expansively about his clerical contemporaries in these cities than about his own sayings and doings. The stories are often slight, the details often trivial, but occasionally we get a pleasant touch, a happy characterization. Bishop Griswold had feared for himself that he might suffer from too much dining out, but at the time of this confession he had only been invited out to dine once, and that by a clergyman of his diocese. Such an experience would justify the traditional *nolo episcopari*. The pages on Bishop Eastburn are more interesting because of certain of his limitations which are suggested rather than displayed. How gracious he could be is shown by his inviting one of his clergymen to preach in the morning, contrary to his custom, as the gentleman reminded him. "But this is a very hot day," said the Bishop, "and there will be hardly anybody there, and I think you had better preach." As an example of his "ample and flowing style," we have his paraphrase of "the broad way" of the Gospel as "that vast arena frequented by far the largest numerical majority." King's Chapel is spoken of as having "relapsed into Unitarianism," but we have never understood that it was originally Unitarian. This is not the only time the Bishop nods, as his proof-reader should have told him, at the same time correcting his spelling of Olmsted and Mansel. Delicious is the story of the English lady who profited much more by Bishop Eastburn's discourse than by Dr. Vinton's, because she could not help listening to the latter, "and so she lost the benefit of the discipline which she had

in trying to follow the Bishop." There is an account of the first Pan-Anglican Conference which minimizes the event as much as possible, and in fact a good many of the solemn functions in which the Bishop shared are made to appear in his narrative as if seen through an inverted telescope. Phillips Brooks, on the contrary, appears in his last chapter in the full proportions of his physical height and bulk, and of his corresponding mind and heart. The testimony is that of an intimate friend, but, this chapter being mainly an extract from a memorial discourse, it is less ungirt than the preceding chapters—a difference which is not for the better.

The Annals of a Quiet Valley in the Wordsworth Country. By a Country Parson. Edited by John Watson. London: J. M. Dent & Co.; New York: Macmillan.

THIS is one of the infrequent volumes which fall gently and restfully from the press into the hands of the reader tired with the blare of sensationalism, or fagged by the rush of fresh-made opinion into print. There is not the semblance of a reason why speed should be made to read such a volume, as time is likely to heighten, rather than diminish, its interest. Its author could not for a sane moment be seriously likened to White, or Walton, or Goldsmith, yet there is just a touch of all of them in his pages. If the reader is addicted to moods of reaction, and likes, once in a way, to brood and philosophize upon the past, there is food here for retrospect, and material with which to humor a philosophic fit to the top of its bent.

For this country parson writes of good old ways, in the good old times, among the hardy dalesfolk or "statesmen," the race of northern yeomen who were content to wear out their bodies in toil, and let it be with their brains as Providence and the parson willed. If the parson sat at his wheel and spun the carded wool while he taught school behind the Communion rails in the church, no stanch dalesman thought the less of his pedagogy; nor of his divinity on the Sunday because he eked out his tithes—a penny on the account of each odd lamb, a halfpenny for each odd goose, two eggs for each old hen and duck, also for every person keeping bees a penny, and the like—by tilling his glebe on the week-day, by hiring himself out at the busy times of washing the sheep in the fell becks, of shearing, and of hay-harvesting, or by trudging his eight miles to the market with thirty-two pounds weight of his wool on his muscular shoulders. That such a parson should be a man to lend himself to quaint anecdote, and his parish clerk another of the same humorous ilk, is a natural expectation amply fulfilled here. The carrier, also, as a public servant had naturally a reputation at the mercy of the public tongue. But he belonged to the new order, when innovation in the shape of wheels had reached the dale, after the post-road had passed its foot and doctors given warning of the disorders—"chief among which was apoplexy"—risked by venturing into the wild and whirling vehicles that ran upon it. Until then, pack-horses had served the heavier needs of the valley, and peddlers supplied the women-folk with the few articles of wear that were not the work of their own industrious hands. Now, alas, honest homespun stuffs have gone out of fashion, together with the arts of spinning the hempen or woollen cloth, of knitting or of sewing, and the country girls find service in the provincial towns "genteeler" than work on the hillside farms their forefathers helped to reclaim from the mountains.

Comparative strangers have taken the place of the old fell-folk: "the church, too, has changed, and the parson—everything, in fact, but the illimitable mountains that shape the valley." Even the neatly turned wooden cups and saucers, the inexclusive three-mouthed pewter posset-cups, and the meal bread, have given place in the homesteads to tea-drinking and brittle china, with the delicate wheaten loaf. The homely customs and daily trivialities of the large, smoky firesides contemporaneous with the former, make the staple of the volume that has no other lore besides, except that of the wild and lovely nature of the Lake District. Nevertheless, it is conceivable the reader may feel there is more of wisdom in its pages than in many a volume where the "meddling intellect" has played a larger part. The pleasant illustrations, by Bertha Newcombe, are altogether in keeping with the modest faithfulness of the text.

Britain's Naval Power. By Hamilton Williams, M.A. Macmillan.

THIS story of the British Navy covers the period from the earliest times down to the victory of Trafalgar. The author is instructor in English literature to the naval cadets in training on board the *Britannia* for the naval service of Great Britain. He has been notably successful in compressing in a limited space the salient facts in English naval history, and in his earlier chapters presents much of interest that is little known concerning the early days of the English Navy. This interest is well sustained throughout, and though Mr. Williams is evidently much influenced by the works of Captain Mahan and others, the book is none the less praiseworthy on that account.

An interesting account is given, in the second chapter, of the fleet collected by Richard I., which accompanied him in 1190 to the Crusades—a fleet that sailed in eight separate lines, each line being spaced by a trumpet-call distance from the next, with Richard himself in the eighth line commanding and regulating the whole. Before reaching Palestine a most remarkable vessel of the enemy was encountered—a Turkish dromon carrying "1,500 men, Greek fire in abundance, and 200 most deadly serpents for the destruction of the Christians." Urged by Richard, the crew of his vessel leaped overboard and succeeded in disabling the enemy's rudder so that she could not be steered. Unable to board her, the English galleys formed in line, and, at a given signal, hurled their iron beaks together upon the huge dromon, with the result that she sank at once, carrying down most of her crew and drowning (we are glad to relate) the 200 serpents.

In the third chapter we have well described the battle of Sluys, which occurred in 1340 on the Flemish coast, between the English and French fleets, the latter being at anchor, and consisting of 190 vessels with no less than 35,000 men on board. The usual fate of fleets at anchor was suffered by the French, notwithstanding that they met "the dogged insular persistency" of the English with the usual "brilliant bravery" of their own nation. So crushing was this defeat that tradition relates that no one of the courtiers of the French King was bold enough to break the news to him—a task finally performed by the Court fool. Interesting, also, is the account of the battle of "L'Espagnols-sur-mer," in 1350, with the vivid description of the defence of the *Salle de Roi* and the other naval exploits which gave to Edward the Third the sobriquet of "King of the Sea."

The vicissitudes of the English Navy are related in the succeeding chapters, which are illustrated by a number of quaint old engravings. The story of the Armada is well told, and with sufficient detail to be entertaining, and finally we are brought down to the time of George I. and the battle off Cape Passaro in 1718. The somewhat doubtful episode of Jenkins's ear, said to have occurred during the reign of George II., is related, with an account of the war against the Spaniards in 1739, and Vernon's victory at Porto Bello, on the Isthmus of Panama, and his subsequent failures and disgrace. We reach more solid ground when we accompany Anson on his voyages, wonderful in experience and hardships, and to be commended to the youthful mariners of the present day as instances of what "rounding the Horn" and cruising in the Pacific meant in 1740, when the *Gloucester*, disabled and scurvy-stricken, was a whole month from the day she was sighted from Juan Fernandez in reaching her anchorage at that island.

The French and Spanish wars of the latter part of the last century are treated in the main with correctness, and sufficient prominence is given to the most important events. In the matter of our war for independence, the author, as a rule, does justice to the efforts of the Americans afloat and ashore, the affair at Penobscot being an exception. The three Continental cruisers and thirteen privateers were there overpowered by a much stronger force of regular men-of-war, which included a line-of-battle ship, under Sir George Collier. Faulty, too, is the description of the loss of the *Royal George* at Spithead in 1782. A moment's warning was certainly given, as has been pointed out in these columns, to the officers on duty, and the capsizing was owing partly to neglect and want of care as well as to the wind and increasing sea of the roadstead.

The last three chapters are devoted to the wars with the French republic and the French empire, glorious to the navy of Great Britain, and from which she emerged as the great sea-power of the world. The author is happy in his account of these wars. Perhaps a proper appreciation is wanting of the disorganized and demoralized condition of the French Navy that resulted from the French Revolution—a condition to which the French Army rapidly adjusted itself. Englishmen, we suspect, do not, as they should, read the lucid writings of Jurien de la Gravière upon these wars. They acknowledge, however, the individual bravery generally shown by the French, and the losses of English vessels of war were so few and far between that there is no temptation to resort to the hair-splitting so prevalent in discussing the tonnage, weight of guns and shot, nativity of crew, etc., of the frigates and sloops that fought actions in our own war with Great Britain in 1812. The author is mistaken, we think, as to Nelson's idea being to go straight ahead for Copenhagen by the quickest route. His suggestion (see Nelson's Despatches, vol. iv., p. 355) was that the Russian fleet should be attacked first at Revel and destroyed before the English fleet was weakened by the attack upon Copenhagen. Fell the trunk first, he said, and the branches go with it.

Churches and Castles of Mediæval France. By Walter Cranston Larned. Charles Scribner's Sons. 1895. Pp. xii, 236. 1895.

THIS book contains 24 of those photographic

prints which are so common nowadays, and which certainly add to the amount and to the good quality of popular knowledge. The views of the west fronts of great French cathedrals, Amiens, Chartres, Bourges, and such châteaux as Chaumont and Chenonceaux, are as important to give as if they were not already well known. Such views as that of the ramparts of Carcassonne, the castle of Falaise, and the apse of Beauvais seen from the south over the tops of the houses, are of much less familiar subjects. All are valuable, not one but what will furnish at once information and artistic pleasure, while many will serve to correct the hasty and ill considered remarks to be found in the text.

Of the text there are twenty-five chapters, the first devoted to "the Historical Monuments of France," and so far valuable that it informs the reader that there are certain buildings which are classed under that title and cared for by the State. The statements contained in this chapter are often inaccurate and misleading, and no mention is made of the Commission des Monuments Historiques nor of the real organization of this branch of the public service. The other chapters are devoted to the different cathedrals, castles, and walled towns, with the usual mixture in the chapters of description and the expression of opinion with anecdotes of travel. Beauvais Cathedral is found "far too high for its length," and therefore "out of proportion," but no mention is made of the fact that only the choir and transepts stand for the cathedral, as the nave was never built. The aqueduct-bridge which spans the river Gard, a building with absolutely no decorative or artistic purpose whatever, is gravely instanced as a contrast to the beautiful temple at Nîmes, which, by the way, our author takes to be "Greek." It is stated that it is not in temples, *e. g.*, in the Maison Carrée, under consideration, "that the chief glory of Roman architecture was to be found," and we are taken to the Pont du Gard for what was its chief glory from this point of view: its mere bigness and solidity. It is odd, by the way, that such enthusiasts as our author never stop to inquire whether, in engineering matters, the moderns are not fairly skilled rivals of the ancients. A few miles distant from the Pont du Gard is the larger structure which carries the aqueduct to Marseilles, the bridge of Roquefavour; and no Roman bridge that we know of compares with the Maintenon aqueduct, nor surpasses half-a-dozen other modern structures that might be named. The beauty and the importance of Roman architecture were not in these objects of mere utility.

The book makes no pretence to exact knowledge or to critical discrimination; the brief prefatory note is perfectly explicit as to that and is pleasantly frank. Neither in the note, however, nor in the pages of the book is there any reason offered or implied for the making of such a book. They exist by scores already —books by travellers who find cathedrals impressive, ruined castles romantic, and buildings where famous people have lived, useful texts for their historical reminiscences. It would be difficult without using terms more severe than the occasion warrants to express the remoteness from just and adequate criticism of most of the remarks upon important works of art with which this book is filled.

A Manual for the Study of Insects. By John Henry Comstock, Professor of Entomology in Cornell University and in Leland Stanford Junior University, and Anna Botsford Comstock, Member of the Society of American Wood-Engravers. Ithaca, N. Y.: Comstock Publishing Co. 1895. Large 8vo, pp. 701; 6 plates, 797 figures.

THE publication of this volume is the completion of a work which has been in preparation for at least a decade of years—a portion of it having appeared in 1888, under the title of 'An Introduction to Entomology.' The original plan has meantime undergone some modification, and the authors believe that in its present form the Manual will more fully meet the wants of teachers and students. There has long been a demand for an elementary work that should present the study of insects in a systematic manner, with so much classification as would permit the habits and names of the more important groups, if not of individual species, to be readily ascertained, and the study successfully prosecuted both in its scientific aspect and in its practical application. Such has been the aim in the preparation of the present Manual, and, so far as can be judged from the somewhat limited examination we have given it, it has been attained. Prof. Comstock is a successful instructor in Cornell University. For several years he has been engaged in working out an entirely new system of classification in the Lepidoptera, which, so far as given to the public, had already been accepted by many of our leading entomologists; it has been more fully elaborated in the present volume, in which, also, has been introduced a uniform system of nomenclature in the several orders of insects (particularly in regard to the wing-veins), the want of which has hitherto been a great annoyance to the student in general entomology, in passing from one order to another.

Perhaps the best feature of the Manual is the analytical keys, by the aid of which insects may be readily referred to the respective orders, and, with no great amount of study, to their several families. Beyond this the limits of a single volume would not permit the tables to be carried. Of course, means by which the student could refer an insect to its genus and to its particular species, such as we have in our botanical manuals, is a great desideratum, but wholly impracticable at present. The cost of such a work would not admit of its preparation, nor of its remunerative sale; its magnitude would forbid its use in the classroom. The briefest descriptions available for recognition of the species so far as now known would necessitate a score or more of volumes of the size of the present one. But from the more than 800 figures contained in the Manual, most of which, it is understood, have been engraved on wood by the associate author with the skill and fidelity only to be attained by the zealous entomologist after years of devoted labor, the merest tyro will easily be able to name many of the specimens in his collection, especially in the Lepidoptera, to which more than 200 pages are assigned. Thirty or more of our butterflies are beautifully figured and their principal features given, and many other species succinctly characterized. In recognition of the growing demand of the day, many of the species mentioned are discussed in their economic aspect.

In the division of the insects into orders, a larger number has been designated than by Brauer or Packard or any other writer. Nineteen orders are recognized, no less than nine of which were originally embraced in the Neuroptera. Several of these contain but a single family each and embrace but a few insects, and it is questionable whether their structural differences are sufficiently marked to call for their assignment into groups of ordinal value. There are many who would prefer a more simple classification not departing quite so far from the old seven orders; for it is evident that if ordinal grouping is to be carried to the point where the true relationship and line of descent of the groups shall be fully shown, it may be continued indefinitely without ever reaching a stage that will be entirely satisfactory. The erection of new orders certainly does not necessarily imply progress, for no two systematists will agree on what they shall embrace or what name they shall bear. The student is perplexed by this constant suggestion of change, and, in despair, falls back upon the simple and convenient seven-order system of Linnæus (amended by Olivier in withdrawing Aptera and adding Orthoptera), which had been quite generally adopted by our naturalists fifty years ago and is not yet obsolete, especially if we add the two orders of Pseudoneuroptera and Thysanura. In their own justification the authors of the Manual state: "It seems to us easier for the student to learn the characters of a large number of well-defined groups than it is to learn those of a smaller number of vaguely defined groups."

The chapter on "Insects and their Near Relatives," briefly reviewing the animals made up of a series of rings or segments on some of which jointed legs occur, will be found useful and important, as showing the true place of insects in the animal kingdom. In the following chapter, which treats of the Hexapoda, their metamorphoses and external anatomy are ably and comprehensively explained and illustrated. Finally, students will appreciate the indication, in parenthesis, of the syllables and accent of each scientific name introduced. Partial accentuated lists had previously been given in several of the families, but nothing nearly so full as this.

Furth in Field: A Volume of Essays on the Life, Language, and Literature of Old Scotland. By Hugh Haliburton. London: T. Fisher Unwin; New York: Putnams.

MR. HALIBURTON'S essays cover four groups of subjects, but they are so short and so superficial in treatment as to suggest the suspicion that they are merely a collection of newspaper articles. The most important and original is the series which describes the scenery of Roxburgshire around Ednam, the birthplace of the poet Thomson, and Southdean (Soudan), his father's parish, where he spent all the most impressionable years of his life. Our author traces effectively the influence of the natural beauties of his home on, and the direction it gave to, the poetical faculties of the author of the 'Seasons.' Short as these articles are, they contain frequent repetitions—evidence of very careless reëditing.

Another series proves, what very few deny, that Burns was well read in poetry, and that he borrowed more often unconsciously, through the inevitable process of assimilation which works in every retentive mind, than consciously, as our author would have us believe, from the sources of his reading.

What might have been the most interesting of the essays are those which are handled least thoroughly, namely, descriptions of the rural customs, vanishing from the Scottish Lowlands, such as the festival of "The Bear Barrel," held during the barley harvest; "The Foy," or feast given to former fellow-servants and apprentices by one leaving, or by the mas-

ter when the apprentice had served his full term; "Hogmanay," or the New Year's Eve frolic, devoted by the whole population to drinking and to "thigging" or begging and "guising" or masquerading, by not only the very poor but the well to-do, whom custom allowed without loss of self-respect to thus bemean themselves; "Hansel Monday," the first Monday of the "New Year," the Scottish day of gift-giving and gift-getting; St. Valentine's and All Fool's Day.

The author, like most antiquaries, traces many of these curious customs to the survival of heathen practices permitted by the Church —it would probably be more correct to say encouraged by the Church. In apostolic times the policy, to use a modern phrase, of the organizers of the early Church was evidently to permit the widest latitude in unessentials to their converts, and not to discourage adherents by opposing their innocent habits. The Roman Catholic Church has always followed and even extended the principle in its missionary work among barbarous and semi-barbarous peoples, by appealing strongly to the senses and encouraging amusements not canonically immoral. It was only last year that a Mystery Play was performed in British Columbia. It is possible that the custom of guising at Hogmanay may have been derived from the Jews; but more probably a common origin is to be found in a universal instinct. The Jewish custom of "guising" at the feast of Purim is carried even further than the Hogmanay practised in Scotland; for, among the Jews, boys and girls disguise themselves in clothes of the opposite sex. As contributions to these interesting subjects the few pages of Haliburton's book are important; unfortunately, however, they are too few.

BOOKS OF THE WEEK.

Armelani, Francesco. Ellero o Guyot? Studio Critico-Sociale. Pitigliano: Osvaldo Paggi.
Benson, E. F. The Judgment Books. $1.
Bra, Dr. M. La Thérapeutique des Tissus. Méthode Brown-Séquard. Paris: J. Rothschild.
Burns's Cotter's Saturday Night, etc. Boston: Houghton, Mifflin & Co. 15 cents.
Caldwell, J. E. Songs of the Pines. Toronto: William Briggs.
Clark, Andrew. Addenda to the Life and Times of Anthony Wood. Vol. IV. Oxford: Clarendon Press; New York: Macmillan.
Clark, Rev. G. H. Oliver Cromwell. Harpers. $1.25.
Cook, Prof. A. S. Exercises in Old English. Boston: Ginn & Co. 40 cents.
Deutsch, Emanuel. The Talmud. Philadelphia: Jewish Publication Society.
Ebers, Georg. In the Fire of the Forge. 2 vols. Appletons.
Frye, A. E. Complete Geography. Boston: Ginn & Co. $1.55.
Galt, John. Annals of the Parish, and the Ayrshire Legatees. Macmillan. $1.25.
Glouvet, Jules de. France, 1418—1429. [Bibliothèque de Romans Historiques.] Paris: A. Colin & Cie.
Hardy, Thomas. Far from the Madding Crowd. Harpers. $1.50.
Henderson, W. J. Afloat with the Flag. Harpers. $1.25.
Hittell, J. S. The Spirit of the Papacy. San Francisco: J. S. Hittell.
Hunt, James. A Home and Work for Every Man; and an Invincible British Empire. London: Simpkin, Marshall, Hamilton, Kent & Co.
Lee, Dr. E. J. Lee of Virginia. 1642—1892. Biographical and Genealogical Sketches of the Descendants of Col. Richard Lee. Philadelphia: The Author. $10.
Luffmann, C. B. A Vagabond in Spain. Scribners. $2.50.
Macray, W. D. A Register of the Members of St. Mary Magdalen College. Vol. I. Oxford: University Press; New York: Macmillan.
Marchmont, A. W. Parson Thring's Secret. Cassell. $1.00.
Markham, C. R. Major James Rennell and the Rise of Modern English Geography. Macmillan. $1.25.
Mitchell, Dr. S. W. Philip Vernon. Century Co. $1.
Morley, Prof. Henry, and Griffin, Prof. W. H. English Writers. Vol. XI. Shakspere and his Time. Cassell. $1.50.
Moore, George. Celibates. Macmillan. $1.50.
North, Sir Thomas. Plutarch's Lives. [Tudor Translations.] Vols. I. and II. London: David Nutt.
Powell, J. W. Canyons of the Colorado. Meadville, Pa.; Flood & Vincent. $10.
Prévost, Marcel. Notre Campagne. Paris: Lemerre; New York: Meyer Bros. & Co.
Putnam, Prof. Daniel. A Manual of Pedagogics. Silver, Burdett & Co. $1.50.
Robinson, Rev. E. G. Christian Evidences. Silver, Burdett & Co. $1.25.
Rollins, Alice W. Aphorisms for the Year. 2d ed. J. A. Thulman. 50 cents.
Sangster, Mrs. Margaret E. Little Knights and Ladies: Verses for Young People. Harpers. $1.25.
Scott, Sir W. Waverley. 2 vols. London: Archibald Constable & Co.
Searle, G. M. Plain Facts for Fair Minds. Catholic Book Exchange. 50 cents.
Sergeant, Adeline. Dr. Endicott's Experiment. Cassell. 50 cents.
Seyler, Gustav A. Illustrirtes Handbuch der Ex-Libris-Kunde. Berlin: J. A. Staargardt; New York: Brentanos.
Smalley, G. W. Studies of Men. Harpers. $2.50.
Southworth, Mrs. Vivia. M. J. Ivers & Co. 25 cents.
Spenser's Faerie Queene. Part VI. Illustrated by Walter Crane. London: George Allen; New York: Macmillan. $3.
Stephens, W. W. The Life and Writings of Turgot. Longmans, Green & Co. $4.50.
Stockton, F. R. The Adventures of Captain Horn. Scribners. $1.50.
Story-Maskelyne, Prof. N. Crystallography: A Treatise on the Morphology of Crystals. Oxford: Clarendon Press; New York: Macmillan. $3.50.
Sullivan, J. W. Tenement Tales of New York. Henry Holt & Co. 75 cents.
The Countess Bettina: The History of an Innocent Scandal. Putnams. 50 cents.
The Wee Widow's Cruise in Quiet Waters. Cassell. 25 cents.
The Yellow Book. Vol. V. London: John Lane; Boston: Copeland & Day.
Thirty Years' Work in the Holy Land. London: A. P. Watt; New York: Macmillan. $1.50.
Tolstoi, Count Leo. Master and Man. F. T. Neely. 50 cents.
Walker, T. A. A Manual of Public International Law. Cambridge: University Press: New York: Macmillan. $2.50.
Wordsworth's Ode on Intimations of Immortality, etc. Boston: Houghton, Mifflin & Co. 15 cents.

JUST PUBLISHED.

MACDOUGAL'S EXPERIMENTAL PLANT PHYSIOLOGY.

On the basis of Oels' "Pflanzenphysiologische Versuche." By D. T. MACDOUGAL. University of Minnesota. vi+88 pp. 8vo, $1.00; postage 10 cents.

112 Elementary Experiments with living plants, not too difficult, perhaps, for high-school pupils who have already studied botany. The necessary theoretical discussions are included. It treats of Absorption of Liquid Nutriment, Sap Movements in Plants, Absorption of Gases, Respiration, and other forms of Metabolism, Irritability, and Growth.

HENRY HOLT & CO., N. Y.

AN IMMEDIATE SUCCESS.

FRANK R. STOCKTON'S NEW NOVEL

The Adventures of Captain Horn.

One Volume. 12mo. $1.50.

AN ENTIRELY NEW STORY BY MR. STOCKTON, TREATING OF ROMANTIC ADVENTURE, AND PUBLISHED COMPLETE IN BOOK FORM, WITHOUT PREVIOUS SERIAL ISSUE.

NEW YORK, THURSDAY, JUNE 13, 1895.

The Week.

THE silver convention held at Springfield, Ill., on Wednesday week is now called the Altgeld convention. The one which it is proposed to hold not later than August, of a national character, might well bear the same name if it should be held, but it will not be held under the auspices of the Democratic national committee. So Chairman Harrity says in a telegram published by the *World*. He says that he does not intend to call the committee together until the usual time, and that, in his opinion, a convention held in advance of the regular period would be harmful to business interests and prejudicial to the welfare of the Democratic party. Several other members of the national committee have communicated to the *World* their views, showing that there is not the least chance of holding such a convention under the auspices of the Democratic party. If it is held under any other auspices, it will merely signify the departure of the Populist Democrats to the place where they belong. They will join the party that supported Weaver for President in 1892. They can now nominate Bland, or Bryan, or Altgeld, but their following will be small. The rank and file of the party will support very wild measures and very wild men so long as they are branded Democratic, not when they wear a different name.

What tough work we have still before us in currency matters is well shown by an interview reported in the *Tribune* of Saturday with Capt. Howell, editor of the Atlanta *Constitution*, an influential paper printed in one of the leading commercial cities of the South. He says the South is "worked up" to an extraordinary degree in favor of silver, and he thinks the idea is not going to die out. He himself is in favor of "arranging a money system to suit ourselves, without recognizing foreign powers in the arrangement." Why is this? Why do we shut out foreign powers? The answer is easy. Because, "when we have a money system that is in conformity with that of all Europe and the rest of the world, whenever there is a panic in any place in the world, we feel the effect of it." "There is no use in denying," he adds, "that, during the period in the history of the country when silver was most largely used, from 1860 to 1875, was the most prosperous time we have ever known." His remedy for panics, you see, is quite simple, and we are glad he has come on with it so soon; but why did he not come sooner? He makes no provision in this scheme, however, for our foreign trade, amounting in all to about $2,000,000,000 annually. In what kind of currency should this be carried on? Or does the Captain propose to drop it wholly, and just let us sell these things to each other?

Capt. Howell's account of the currency of silver and accompanying prosperity between 1860 and 1875 satisfies us that 1860 was the year of his birth, and that his earliest financial ideas were derived from Uncle Remus. It has long been known that the South was short of collateral. In fact, one of the Southern financiers in Congress declared seven years ago that it was rather collateral than currency which the South needed. Capt. Howell admits this, and says that this is the cause of the high rate of interest at the South. The rate is now 10 or 12 per cent. Increase the currency, the Captain thinks, and down would go the rate. But why should one lend money to a man who has no collateral, at a low rate of interest, because there is an abundance of money in the country? The question with a money-lender must always be, not how much money there is per capita scattered around the State, but how much per capita the man has got who wants to borrow. "I have no collateral, Colonel, and want a loan mighty bad, but there is so much money in the country to-day I should not think you would need much security," is an address to a bank president which would, we have no doubt, make any bank in the South ring with laughter. It would be discouraging to find the editor of a leading newspaper in such an infantile state of mind regarding the principles of finance, if it did not prove that he was personally prosperous and never wanted a discount.

Postmaster-General Wilson delivered the commencement address at the University of Mississippi last week, and among other things said: "I long to see the South again in national leadership." Unfortunately it is only in very rare cases, like Mr. Wilson's, that the South for many years has contributed to the national councils men worthy to be followed throughout the country. The senatorships from that part of the country are largely filled by old fogies who do not even stick to what was good in their ante-bellum Democracy, but are given over to every sort of financial folly. The Southern vote in each branch of Congress was practically solid for the income tax, and both of the Southern Democrats on the Supreme bench voted to hold it constitutional. "Sound money" and "strict construction" have alike lost their hold upon Southern men, and they "wobble" around at the mercy of any gust of popular feeling. Until the South escapes from such a morass, the rest of the country will not be likely to accept its leadership in anything.

The Republicans are not to escape entirely the embarrassment of a decision on the silver question this summer. They have been enjoying the confusion into which the Democrats have been thrown by the "snap" convention in Illinois so much that they have overlooked the approaching convention of the National League of Republican Clubs at Cleveland. This convention will be attended by delegations from Colorado, Montana, and the other mining States which are bent upon securing the strongest sort of a silver declaration. Senator Dubois of Idaho says that it will be hardly worth while for the Republicans in his part of the country to go into a campaign next year unless the national convention declares for free coinage, and he proposes to tell this truth to the League of Republican Clubs, with the hope of securing something from them. It is, of course, impossible that the silverites should have their way in the Cleveland convention, but there is some danger that their threats may lead to the adoption of a compromising deliverance. At any rate, there is at present enough to occupy Republicans in "bracing up" the delegations from the sound-money States.

Since the spring season began, the price of wheat has advanced 25 to 30 cents per bushel. It is generally agreed that the speculators had the chief hand in this advance, and that, in fact, the recovery has been largely due to reviving confidence in the stability of our currency. For capital may be invested in grain as well as in stocks, a leading motive in both cases being the confidence that if the grain itself, or the contract for its future delivery, be laid aside for a month or two, it may be resold then at higher prices. We wish to call attention to one phenomenon connected with this movement. Not a breath has been heard, during at least four months, from the advocates of the "anti-option" law. Yet nobody can have forgotten the urgent plea of these philanthropists a year or two ago. Speculation in grain and cotton "futures," we were then informed, must be prohibited by law, unless the farmer is to be absolutely ruined. Why? Because speculators always force lower prices, make an artificial market, and cut the ground from under the farmers' feet. And certainly the successful produce speculators did sell during at least two years, and prices did fall. But here, all at once, is half the floating capital of Chicago and New York scrambling to bid up and accumulate grain contracts, with equally strong speculators bidding up and accumulating cotton. Still more wonderful, the men who are selling "fu-

tures" and checking the market's upward movement are the farmers with plenty of growing wheat and cotton.

Platt's address to the Republicans of this State is an ingenuous and engaging appeal to them to look upon him as the only genuine reformer that they have among them at present. The wicked newspapers have lied so about him and his late Legislature that he finds it necessary to take the people into his confidence, and, with the assistance of the truthful and virtuous Charley Hackett, tell them the exact facts in the case. This is what he says in the address. What he said to Charley in private probably was: "These confounded Mugwumps and anti-Platt Republicans have been telling the people such ugly things about our doings at Albany that we must lie a little to set the public mind right in the matter, or there will be disaster at the polls in November." So the two composed the address, and it is a powerful document. We have space only for a single one of its more obtrusive falsehoods. Speaking of the new ballot law, Platt and Hackett call attention to "the amendments to the corrupt-practices act extending its provisions to party primaries and conventions," but make no mention of the fact that every attempt to amend that act in such a way as to stop the corrupt use of money in nominations and elections was fairly hooted down in the Assembly. The amendments cited by them are perfectly useless, or they would never have been permitted to pass.

Mr. Elihu Root's opinion on the "constitutional point" raised by Mr. Aldridge, State Superintendent of Public Works, leaves so little of the point that even Aldridge and his "owner," Platt, must see that it would be a sheer waste of money to go into court upon it. There is nothing for Aldridge to do now except to obey the law and have all the places in his department filled in accordance with civil-service regulations. Undoubtedly had he thought that he would be obliged to administer the office in this way, he would never have accepted it. He went into it as a spoilsman, hoping to use it as a machine for the benefit of Platt politics. When the Governor consented to appoint him, in spite of the protests of reformers, Aldridge jumped to the conclusion that the Governor would stand by him through thick and thin, that he shared his own contempt for reformers, and would uphold him in all his plans for "working the office for all it was worth." He did not suspect for a moment that the Governor, after appointing so notorious a spoilsman to office, would be so hard-hearted as to remove all the spoils of the office from his control. He accordingly snapped his fingers at the law, tried in one way and another to bulldoze or cajole the Civil-Service Commission, got bills through the Legislature enormously increasing the patronage of the office, and awaited in confidence the cordial support of the Governor for his course. To his astonishment, the Governor took sides with the reformers by vetoing his patronage bills, and joined with the Civil-Service Commission in compelling him to obey the civil-service law. What is left for Aldridge now? Nothing but cursing and communion with Platt.

The interesting announcement is made that Prof. Collin, who acted as "legal adviser" for Governors Hill and Flower, has resigned from the Law Department of Cornell University and has opened a law office in this city in partnership with Blue-Eyed Billy Sheehan, late of Buffalo, under the firm name of Sheehan & Collin. It is added that Sheehan is a Democrat and Collin is a Republican, but by whatever name they call their politics, they have long dealt in the same kind of law. While Hill was Governor and was fighting ballot reform, Collin supplied him with the kind of "law" he wanted in order to base his opposition on "constitutional grourds." When Flower was Governor and wanted to veto the appropriation for the Lexow investigation, Collin furnished him with the "law" for that action. Later, when Flower wished to deny the right of the present Legislature to meet under the new Constitution, Collin gave him a lot of "law" for so doing, and came in person to this city with it, reading it with much pride to an assemblage of our leading lawyers, but disowning it when he saw what extremely short work they made of it. He and Sheehan have worked together harmoniously in political law for many years, and they may work with equal harmony in private law, but they will not be able to back up their views with the power of the State Government. We congratulate Cornell University on getting rid of Collin. Whatever else may be said of his kind of law, it is clearly not a kind which should be infused into the minds of ingenuous youth.

The late Pennsylvania Legislature was one of the worst the State has had for many years. It became notorious for the openness with which it waited for the orders of Boss Quay before taking action on any measure of importance, and the obsequiousness with which it obeyed those orders. Public sentiment was repeatedly set at defiance in the most flagrant manner, and both the boss and his tools seemed to exult in opposing public feeling. Even measures which had no partisanship about them, like the bill for the retirement of judges upon a pension at seventy, could make no headway if Quay for any reason came out against them. As a means of showing his power, apparently, the boss had Quay County established. The only wonder is that he did not change the name of the Legislature to agree with the facts. There is at present great indignation against Quay among Republicans. But we doubt if it worries him much. The indignation will not hurt him unless it can be kept alive and potent till members of the next Legislature are to be nominated. That will be a year hence, and before that time the probability is that most of the present "kickers" will have forgotten all about it, and Quay will run the caucuses as usual.

The most surprising feature of the session of the Massachusetts Legislature which has just adjourned was the development of Gov. Greenhalge as a man of independence and force. We do not recall any other case precisely like it. There have been plenty of instances where men who had no previous political record have shown unexpected firmness in executive positions. But Greenhalge had been long in politics, he had been a member of Congress, and he had served as Governor one year without ever varying from the lines of the strictest partisanship. Indeed, he used to sneer at Mugwumps for their alleged assumption of superiority, and would have resented the notion that a Governor should set himself up as knowing more than a Legislature which his party controlled. Yet during the session just closed he vetoed no fewer than sixteen bills, among them several of great public and partisan interest. Beginning with a refusal of his approval to the first bill that reached him proposing an increase of salary, on the broad ground that this is no time for such measures, he blocked a great number of grabs which their promoters had expected to log-roll through. By his vetoes of the Woburn and Holyoke State police-commission bills, he checked the dangerous tendency towards centralization and the decline of local spirit. Finally, by his message returning without his approval the soldiers'-exemption bill, he did his best to save the civil-service system and the reputation of the veteran from the harm which a combination of the spoilsmen and the Grand Army machine was bent upon inflicting.

Judge Holmes of the Supreme Court of Massachusetts has given a decision on the question of the right of strikers to exert "persuasion, advice, and social pressure" to prevent men taking their places, which will excite a good deal of comment. He admits that "it is well settled that deliberately and in combination to interfere with a man's business to his pecuniary damage, by persuading others to have nothing to do with him, is actionable (Walker vs. Cronin, 107 Mass. 555)." But he holds that this applies only to interference for pure mischief or for harm's sake. Interference for a good purpose, such as to compel a man to accept the strikers' schedule of wages, would be justi-

fiable, in his opinion, though he admits that "the weight of judicial opinion is the other way." The trouble with this decision is that it recognizes the doctrine out of which all that is mischievous in strikes arises, and which, pushed to extremes, would be destructive of industrial freedom. We mean the doctrine that persons who have once been employed by a particular man or corporation have the right to remain in the service as long as they please on their own terms, and to employ any means short of violence to attain this end. It is only on the theory that they have a vested interest in the places they have left, that strikers are morally or legally justified in trying to prevent other men from filling them by either "persuasion, advice, or social pressure," or patrolling.

If we applied this doctrine to any other contract—the hiring of a house, for instance, or the employment of a domestic servant—its absurdity would become at once apparent. If a tenant whose offer of rent had been rejected by the landlord were to collect a crowd in front of the house to dissuade other tenants from renting it, or if a butler were to distribute handbills denouncing his late employer's service, and organize patrols to keep would-be successors away, everybody would cry shame, and the police would interfere. But a factory-owner, whose credit, and maybe his bread, are dependent on his success in managing his business in his own way, would find, under Judge Holmes's decision, that he had entered into a compulsory partnership with a number of men whom he disliked and wished to be rid of, but who had the power of fixing his "schedules of wages." Moreover, Judge Holmes appears, in defining intimidation, to overlook the state of mind of the persons intimidated. A course of conduct which frightens people and limits their freedom of control through fear, whether it consists in hooting, jeering, threatening, or "persuading" with a big stick, is surely, or ought to be, unlawful, whatever the motives of those pursuing it. Any agency which prevents me from doing what I should like to do, and could do legally, is an abridgment of my freedom.

Many of the Southern States of late years have held their State elections at some other period of the year than the time for choosing members of Congress and Presidential electors. This system was adopted in order to secure immunity from the federal election laws, the national authorities having no right to interfere with any election in which no national official was chosen. Now that these laws have been repealed, the States will doubtless consolidate their elections, thus saving a very considerable expense. Florida takes the lead. The Constitution makes the State election now come in October. The Legislature has submitted to the people an amendment, which will doubtless be ratified, changing the time to the day of the election of federal officials in November.

Much of the Cuban war news with which we are favored from day to day is open to the suspicion implied in the old Spanish proverb, *Luengas vias, luengas mentiras*—lies are whoppers in proportion to the distance from which they come. Still, there seems little doubt that expeditionary forces from this country are landing from time to time in Cuba, though doubtless not in such overwhelming numbers and possessed of such overwhelming valor as the correspondents would have us believe. This is a business upon which our State Department should keep a watchful eye. A country that has taken such high ground on the duty of neutrals, and made England smart for negligence, cannot afford to be negligent itself. Of course, it is difficult, if not impossible, the nearness of Cuba to the Florida coast being considered, to prevent straggling filibusters from slipping across. Nor can the sale of munitions of war be prevented. But anything like a regularly organized force, especially anything like a ship fitted out for fighting, should not be allowed to get away from her shores by a nation that has made the *Alabama* case a precedent in international law. We know of no complaints that the Spanish Government has made on this score, nor of any cause for such complaints. The reason for putting a lawyer like Mr. Olney at the head of the State Department is that all these questions should be treated dispassionately as matters of law, not of sentiment. We have no doubt that our obligations towards the friendly government of Spain will be as scrupulously discharged by Secretary Olney as they were by the late Mr. Gresham.

Meanwhile, there can be little doubt that the rebellion, far from being almost put down, is spreading and becoming more formidable. Capt.-Gen. Campos has had to call for more troops and money. He is finding his task almost as difficult as Lord Howe found his in this country, and not altogether dissimilar. The insurgents cannot stand against regular soldiers, but in that very fact lies the mischief. The rebels will not be caught in the open for a pitched battle, to put their fortunes to the touch at one stroke, but run off into the interior fastnesses, whence they emerge in sporadic bands of guerillas to tire the Spaniards out with marching up and down to overtake an ever-fleeing enemy. Every week that passes makes them surer of themselves and more audacious, while all the time they are drilling and organizing and getting better fitted to meet the troops of the line on equal terms. It was these tactics that drew out the former rebellion through ten years, and they seem now to be in successful operation again. The outlook is a gloomy one for both Spain and Cuba. Spain is ready to spend her last dollar to retain the island, but her last dollar is nearly enough in sight to make any great prolongation of the contest equivalent to bankruptcy. The "ever-faithful isle," meantime, is ravaged, its industries flattened to the earth, and the best prospect before it is that of a huge debt and crushing taxation, whether the rebels win or lose.

At the Lord Mayor's banquet on May 22, Sir William Harcourt made some sensible observations on the passion for piling up public expenditure. He justly said that it had now become "an international epidemic." In all countries which have a public finance at all, finance ministers have to struggle desperately to make both ends meet, if they are at the mercy of the Legislature, or, if they are in a responsible government, have to refuse mercilessly a whole line of appropriations asked for by the representatives of the people. Of all things in the world, as Sir William said, the easiest to invent is some fresh mode of expenditure, and everybody will vote for it with enthusiasm. Concurrently, however, the hardest thing to invent is a new tax against which everybody will not vote with high and stern indignation. The case was well put by a French minister the other day, when he affirmed that "no finances in the world can bear the strain of a policy at once military, naval, colonial, and philanthropic." The combination is indeed formidable, and here, too, the greatest of these is charity. We can support an army and navy, we can pay for the ordinary business of government, but when it comes to voting every man a competence, to making a bad business a good one, to bolstering up prices and giving every man a good profit and plenty of cheap money—above all, when it comes to insuring every worker employment at high wages and short hours—then the bottom of the inexhaustible public treasury is reached in a twinkling. Philanthropic public finance is only another way of saying public bankruptcy.

That so many inexhaustible public treasuries are already exhausted is a disagreeable surprise to Socialists, tacit or avowed, and excites them to anger. Our eloquent old friend M. Jaurès was tremendously outraged in the French Chamber the other day when the Finance Minister opposed some of his schemes to promote popular virtue and happiness by means of public appropriations. The Minister coldly said that there was no money in the treasury, but M. Jaurès passionately asked what of that, and threateningly wanted to know if he was going to oppose "the law of democratic evolution." That this law is to drain the treasury there can be little doubt, but some other law has got to be devised to fill it up again, and toward such a law democracy does not seem to evolve,

"SAFE AND PROPER BIMETALLISM."

THE change in Mr. W. C. Whitney's views about money, as announced in the press on Monday, is extremely gratifying. His first deliverance on his arrival here ten days ago was intensely bimetallic, and it was bimetallic, too, not offhand, or at first blush, but after "having given a great deal of attention to the subject." But he was not for lonely bimetallism, or for bimetallism by divine ordinance, or for bimetallism as "justice to silver." He was for "international bimetallism," or a "safe and proper bimetallism," created by "the co-operation of other nations and commercial peoples." When were we to have this? "Within two or three years" sure. "Germany has declared in favor of it; England will soon follow." The "strongest and most enlightened English statesmen," including the "brainy Balfour," are "in favor of it." Those who remember that the first attempts at international bimetallism through "conference" began seventeen years ago, and that the safe and proper bimetallists were then far more confident of the coöperation of England than they are now, have smiled over these earlier convictions of Mr. Whitney. We are not surprised that a little greater familiarity with the subject has apparently caused him to abandon or greatly modify them. He is now for "sound money." Not a word does he say about bimetallism of any description. "If the silver-men should carry the next Democratic convention, it would split the party in two." And he adds:

> "You see, prominent men all through the West have been preaching for the past fifteen years that the free coinage of silver was all that was necessary to make things boom. They have maintained that by establishing a ratio between the two metals of 15½ or 16 to 1, this country could solve the financial problem for the entire world, and that other nations would have to follow. These people have become so thoroughly saturated with this kind of talk that it will take some time and much work to counteract its influence. There are a good many sound-money men in the West and South; and the Memphis convention, I think, has helped the cause along.
>
> "We had this same experience in another form after the panic of '73, when greenbacks were regarded as a panacea for all the ills of the country, and that spread throughout the whole country, and both parties were obliged to take some sort of a stand on the matter, but finally the good sense of the people asserted itself, and we haven't heard much of greenbackism since. I think the people will eventually treat this question just the same as they did the greenback question. They want sound money now just as much as they did then."

This is common sense, and it is the opinion of New York. Mr. Whitney's bimetallic gospel is as much out of place here to-day as abolitionism would have been at the South before the war. Proper or improper, people will have none of it, and they are prepared to be as "unjust to silver" as may be necessary to take care of their credit and their business.

We will now make a few plain statements about this international balderdash. Sir William Harcourt stated boldly the other day, what every man of sense knows to be true, that neither the present Government nor any Government that may come after in England will ever give the smallest countenance to any attempt to displace the gold sovereign from its present position as the national standard of value. Mr. Chamberlain is as emphatic on this point as Harcourt. There is not a man in the party who does not know well that the Conservatives dare not go to the polls with any silver or bimetallic nonsense in their heads. Asking the great English business world to change its standard of value on the demand of a lot of foreign bullion speculators, is like asking them to give up India or the Rock of Gibraltar. Mr. Balfour is dabbling in the idea, but Mr. Balfour is not a business man, nor an economist, nor a man known in any sense in the world of finance. He is an acute dialectician in the metaphysical field, but he has no more head for questions of currency or finance than some very able men have for mathematics. We doubt if a single English business man of weight, even of the bimetallic persuasion, pays much attention to what he says on this topic. The rock on which the huge superstructure of English commerce—the greatest the world has ever seen—rests is stability, stability of currency, stability of taxes, stability of policy. Consequently the idea of trying experiments in currency in combination with foreigners has never taken strong hold of the national mind. Were it put seriously to a representative body of Englishmen whether they would go into partnership with Russia, Spain, Portugal, Italy, Greece, Mexico, Ecuador, and the rest of the financial ragtag and bobtail, in trying to create, without any necessity of their own, an artificial standard of value, we believe the author of the proposal would have to run like a "welsher" on the Epsom Downs. In truth, the idea is so preposterous to any one familiar with the tone of English thought on this class of questions that the expectation of any support from England for the bimetallic craze, we make bold to say, discredits the intelligence of any man who holds it. Were the Conservatives to go to the country with any such scheme, the Liberals would come back to power, with Harcourt at their head, with a very great majority, which would last as long as the bimetallic craze made itself visible in politics.

The secret of the queer tales about the progress of bimetallism in England which travellers like Mr. Whitney bring back, is that of late years they see a great deal of the impoverished landholding class, who, like the "debtor class" everywhere, are in favor of anything that will raise prices. "Cheap money" is money in which mortgages could be paid off, in which grain would rule high, and rents come back to their own level, and settlements be made easy. The same class fondled the protective idea for nearly a whole generation after the rest of the nation had buried it. When, therefore, they get hold of a wandering American, they fill him full of bimetallism, and he comes back and tells us the game is up, and that silver is going to be redeemed. It was they who threatened us so long with "fair trade," meaning some kind of return to duties on food, but the British business world has no more notion of allowing the pound sterling to be tampered with than of putting ten shillings a quarter on wheat. And we may depend upon it, when the work of raising values by international agreement is once begun, it will not stop at silver. Everything will be raised by treaty, and nobody will ever see another poor day.

MEDIÆVAL METHODS.

IN the recent legislation which gives the veterans of our thirty years (ago) war priority over all other male citizens of Massachusetts in the strife for office, the great and General Court of that progressive commonwealth has reverted to mediæval methods in an astonishing manner. A thousand years or so ago, any subject of King Rodolph or King Edred, who was charged with invading his neighbors' rights by force or fraud, might clear himself by taking a solemn oath that he did no such thing; and he was then expected to produce as many friends as possible, who attended him to court and gave affirmative testimony that he never did it. If friends were not forthcoming, he had to fall back on the Almighty, who would maintain his servant's innocence in two ways, by the combat or by the ordeal, such as walking barefoot over hot ploughshares, a method never resorted to except by such as were short of devoted friends. These ways of testifying to one's probity or good conduct have been thought barbarous and obsolete. But the Massachusetts Legislature virtually revives them.

There is in this country a tremendous pressure for Government appointments. The good things of the public are sought for eagerly, passionately, rapaciously, by a crowd of office-seekers, who have as a class acquired a very bad repute and are greatly distrusted. In order to wipe out this reproach, the very worst of the crew, on whom the long-suffering public has long had its eye as plunderers and defrauders, have always been able to produce an army of backers, devoted comrades, the true mediæval compurgators, ready to make affidavit that Jake or Barney was one of our best citizens. But the suspicious public at last "got the snuff into its nose," as the Neapolitan says, and determined to put the office-seeker through an ordeal by making him walk the hot ploughshares of an examination, believing that they would prove cold and harmless to one whose character and training fitted him for the work. But your Massachusetts veteran has no intention of thus establishing his fitness by the judgment of heaven, demonstrated in his own person. He much pre-

fers to take solemn oath that he is no rapacious office-seeker, that he is really competent, and to bring two friends, true feudal compurgators, to assert (not swear; *he* takes all the oaths required) that they believe him to be exactly the man for the place. No ordeal for him; compurgation, if you please. And why not the third plan? Why not the combat? Certainly; that he went through thirty years ago—as if Front de Boeuf, accused of roasting Isaac of York in 1194, should swear he helped the Christians in Palestine about 1160. This is mediævalism made easy. In fact, there is a more recent precedent. Readers of Sir Walter Scott will remember one Sir William Scott of Deloraine, whose habit it was, like others of his clan, notably the poet's own ancestor, to make incursions into England, drive off cattle by the score, burn down any buildings inconveniently situated for his purpose, and kill any Cumbrians who foolishly resisted. For these amiable traits the warden marched an army into Teviotdale, and said to Lady Buccleuch:

> "We claim from thee William of Deloraine,
> That he may suffer march-treason pain,"

and then recapitulated the above exploits. Her reply, thoroughly approved by all the clan Scott, was that

> "—either William of Deloraine
> Will cleanse him by oath of march-treason stain;
> Or else he will the combat take
> 'Gainst Musgrave for his honor's sake."

And so he did, and, by sending Richard Musgrave after his brother, proved that he had never raided his estate at all.

There has been an organized raid upon the Treasury and public service of the Union and the States. The noblest principles of our institutions, the noblest heroes of our history, have had their sacred names abused to provide greedy and incompetent men with positions which belong by every right to such, and such only, as are proved to be fit for them. The ancient commonwealth of Massachusetts has taken the lead in establishing such a method of proof; she encourages every citizen to pass an ordeal, strict but honorable and useful, before he shall be appointed to her offices. In the administration of this system she has been most generous and thoughtful to the soldiers of the civil war; and now her Legislature, which has ruled her continuously for over 250 years, allows any one of a would-be military aristocracy, exactly like the moss-troopers of Branksome and Lochmaben, to swear themselves into any employment they fancy—"cleanse them by oath of march-treason stain." If told that that is no true evidence of competency, even when backed by admiring and complacent friends, if told that the old system of appointment by self-assertion and endorsement has been abolished, they will resort to the ordeal by battle, "the combat for their honor's sake"—only it must be a combat of thirty years ago. Truly, American institutions are getting strangely modified, and the stars and stripes assuming the character of a border baron's bearings.

THE GAINS OF THE NEW YORK ELECTION.

The names of the new city magistrates have been announced, and the selections are eminently satisfactory, so that we shall by July 1 have a police bench worthy of our civilization. This puts us in a position, for the first time, to make a deliberate examination of the gains of the reform movement, and it must be confessed that, in spite of the efforts of the Legislature to minimize them, in spite of the failure of several important bills, the position of the city has been greatly improved. It will be remembered that the three grossest abuses of the Tammany régime were the police bench, the police, and the street-cleaning. Through the police justices, and the police acting in concert with them, "the organization" was able to exercise almost despotic rule over the poorer classes. These classes really held their liberty and property at the mercy of the police justice and the captain of the precinct, and paid taxes to them above and beyond those legally due to the city and the State. The criminals and law-breakers, particularly, paid heavily for liberty to pursue their several vocations, and at Presidential elections the Democratic party was compelled to purchase the aid of large hordes of jail-birds with honors and rewards originally meant for respectable citizens. In fact, government by "pull" almost completely supplanted the government of the laws in one of the leading cities of Christendom. There was little more trace of Western jurisprudence in the lower walks of New York life than in Damascus or Jiddah.

Now this has been changed—we will not say permanently changed, because, with regard to the police, we have not yet secured the legislation necessary for permanence; but the police bench has been cleared of the unspeakables who have, we will not say sat upon it, but infested it. The poor will hereafter get justice and law from respectable men. The poor foreigners in particular will get new ideas of American morality and law. The "pantata" will vanish from the list of American functionaries. We do not believe any church has returned thanks during the last ten years for a greater blessing, or one more important to the moral and social life of the city.

The failure to secure the reforms in the police organization which the Lexow committee's investigation pointed out as necessary, was a bitter disappointment. The Mayor's acceptance of the bipartisan bill was a heavy blow and great discouragement, but mainly, let us say, because it excited apprehension of future indifference on his part to the opinions of those who elected him, and because it was likely to encourage Tammany and the Plattites in their resistance to all reform. But it is often, and not unnaturally, forgotten that nearly all the changes in the police organization which we fought for and hoped to secure, were suggested by the public belief that the Police Commissioners would generally be rascals. It is only on this theory that the reformers proposed to take away from them the selection of their own men. In no police force in the world is this privilege denied them. Many other provisions of our reformatory police legislation are intended in like manner to guard against the possibility of a succession of corrupt Commissioners. But we have got from Mayor Strong a Police Commission which commands public confidence, which is apparently bent on purifying the force, and which may be relied on to administer it with a single eye to the public interest. The defeat of the reformatory legislation is, accordingly, for the moment not a serious calamity. We have got everything, or nearly everything, it would have given us except security as to the remoter future.

The street-cleaning reform has been so much discussed of late that we need say but little about its political aspects. But of its social and sanitary and moral aspects too much cannot be said. It is, in fact, as regards the moral elevation of the poor of the city, the complement of the reform of the police bench. Such justices as Paddy Divver and Tom Grady were the natural rulers of a population which dwelt in Tom Brennan's filth, and whose streets were nightly filled with the wagons of lewdness and theft. Churches and schools would labor in vain among people whose physical surroundings were so odious. In securing the services of a man like Waring, who cared nothing for "pulls," and was capable of cleaning the streets in the manner prescribed by law, Mayor Strong has, therefore, conferred on us an inestimable boon. We do not believe the educating influence on the masses of a pure bench and clean streets during the next three years can be overrated. Having seen good city government even for three years, people will not accept any other. So that, for the first time in our recollection, we think it may be safely said that those who go off to the seaside or the mountains may do so in confidence that no ground will be lost during the season in which so much enthusiasm has hitherto died out, and so many high hopes have come to naught.

THE NOVELIST ON HIS TRAVELS.

The English press has shown a great deal of eagerness to get Daudet's opinions of London, since his recent visit to that city. All his interviews in the French papers relating to his experiences and impressions across the Channel have been promptly telegraphed to England, reproduced at full length, and made the subject of much wise comment. Daudet was greatly struck by "the silence of London"—which was his rather neat

way of saying that the roar of the city was so great and continuous that nobody tried to talk, and that business was transacted, so far as possible, by dumb show. He was also delighted to meet Dickens's characters in the flesh. On every hand he recognized them—the Cheeryble Brothers doing their famous benevolent act, as the variety programmes say, Uriah Heep writhing with suppressed villany, and so on. This naturally brought great joy to many hearts in England that had grieved over the irreverent charge that Dickens was a caricaturist, and that his personages never were, on sea or land. If a famous and keen-eyed Frenchman saw them on every London street-corner, the scoffers had better hold their peace.

The exaggerated importance attached to these impressions of a hurried traveller, who happened to be a noted writer of fiction, is characteristic of a journalistic and gossip-loving age. We have come insensibly to believe that a man famous for any kind of achievement must have valuable opinions on all classes of subjects. Hence the habit of reporters of gravely knocking up at midnight all sorts of specialists to ask them what they think about something they know nothing of whatever. If he is a specialist, that is enough; his opinion about anything must be of special importance. If he is a great writer, whose works about the things he knows are read by thousands, then thousands must be anxious to read his views on things of which he is profoundly ignorant.

But there seems to be an additional and particular reason why famous novelists have become the especial prey of the interviewer. This is the age of realistic fiction. Its masters excel in minute and accurate observation, and who then so likely as they to seize and state exactly the salient and typical facts of any country or civilization, however alien to them? On no other theory can we account for all the interest taken in Daudet's ideas of London, Bourget's impressions of America, and Zola's account of Rome. At last the mirror was to be held up. At last the trained and analytical eye of the realistic novelist was to see what the foreign philosopher had missed, what the statesman on his travels had overlooked, and what, it must be said to be too often the case, the most intelligent natives had never dreamed of.

If the results have not come up to expectations, it is only what might have been expected, only what a closer eye on the nature and methods of realistic fiction should have prepared one to anticipate. The greatest triumphs of realism have to do with mere externals. You verify those, and then you think that all the other details are equally literal transcripts of the truth. The novelist tells you that his hero stepped moodily upon the Third Avenue cable cars at Twenty-third Street and got off with a relieved air at the Post-Office, and when you come upon such life-like bits, so manifestly capable of verification, you are at once ready to believe all that the author tells you of the secret springs of action and the inevitable development of character. But it does not take a very wide experience of either novels or life to teach one that the internal does not always correspond to the external; that it is much easier to make mistakes about. Yet it is only the most external of external things that the foreign observer can see in his rapid flight, and the most his friends can hope for is that he may not make too many unconscionable blunders even about those.

Some recent tests of realistic fiction are a little discouraging to the devotees of that cult. A French abbé, M. Paul Lallemand, has lately published a little study on "The Priest in the Modern Novel." He examines one figure after another among the priests to be found in the most famous and most realistic novels, only to have to wonder again and again at "such ignorance and misunderstanding of the priestly life." To Feuillet and Bourget he gives qualified praise for their priestly personages, but Coppée and Halévy and Duruy excite his ridicule, while of Zola he says that he may succeed in the not very formidable task of describing a priest's dress and gait, but that "the heart of a priest is a sealed book to him." The realism of Mr. James Whitcomb Riley has in a like manner been brought into grave doubt. His Indiana dialect is vouched for by Mr. Howells as accurate beyond compare, but Mr. Maurice Thompson, who is himself a Hoosier, says that it is all an ideal thing of Riley's own fancy, having no resemblance to anything in the heaven above or on the earth beneath of actual Indiana.

All things considered, we doubt if the travelling novelist will just yet wrest the crown from Arthur Young, De Tocqueville, or Mr. Bryce. Their methods are plodding and uninspired, but somehow they do the business. The first-named "wise and honest traveller," as John Morley calls him, spoke lightly of those books on Europe which had been written by observers "whirled along in post-chaises." What would he have thought of our modern cannon-ball-express travellers, producing books as fast as they ride? For Young, three years on horseback and on foot in every corner of France was not too much time to spend in preparing to write of French agriculture. De Tocqueville explored our penitentiaries and prisons for two years before thinking of putting pen to paper. Mr. Bryce has doubtless been in labors more abundant than either. In rapidity, in inspiration, in *réclame*, the travelling novelist far outstrips any of them; yet Arthur Young's book has been a classic in France for more than a hundred years, while De Tocqueville and Bryce will be read in America as long as anything is read.

PINCKNEY'S DRAFT OF A CONSTITUTION.

BROOKLYN, June 10, 1895.

THE references in the briefs of both sides in the income-tax argument to Charles Pinckney's draft of a Constitution, as well as the evident authority given that document in the decision read by Chief-Justice Fuller, only accentuate the importance of preventing, if possible, its further use as historical or legal evidence. As early as 1836 Madison called attention to the fact that the paper was an evident fabrication, yet constitutional writers have continued to quote it with a persistency and frequency most extraordinary.

The history of this paper begins with May 29, 1787, on which day the *Journal* records Pinckney as submitting it to the Convention in a speech, and its reference to a committee. That is the first and last mention of it in the official proceedings of the Convention, and, for some unexplained reason, neither Madison, Yates, nor King gave the slightest abstract of the plan or speech, nor recorded any subsequent mention of the plan in their notes of the debates. Indeed, so little attention was paid to it that a copy was not even retained among the papers of the Convention, and, in consequence of this, when John Quincy Adams edited the *Journal* of the Convention in 1818, he applied to Pinckney for a copy of the paper, and received from him an outline of a Constitution, which he printed without question, and which has since masqueraded as the one Pinckney submitted to the Convention. Fortunately, the same vanity which induced Pinckney to foist a false plan on the public, in the hope of thereby proving that much of the Federal Constitution was derived from him, had in 1787 led him to print privately the speech he made in introducing his plan of government, and by comparing this speech of 1787 with the pseudo-draft of 1818 we learn how much credibility is to be given to the latter.

The speech indicates that Pinckney proposed a division into legislative, executive, and judicial, as in the draft. In the election of the legislative, however, which was to be proportioned to population, we at once find a striking contradiction. In the draft the lower house was to be chosen "every —— year by the people." In the speech he states that it was to be chosen for four years, and, singularly enough, makes no mention of how it was to be elected, but from a contemporary letter we can draw an inference, for in 1789 Pinckney wrote: "Are you not, to use a full expression, abundantly convinced that the theoretical nonsense of an election of the members of Congress by the people in the first instance is clearly and practically wrong, . . . and that the Legislatures are the only proper judges of who ought to be elected?" The Senate was to be elected by the lower house "upon proportional principles . . . which, though rotative, will give that body a sufficient degree of stability and independence. The districts into which the Union are to be divided will be so apportioned as to give each its due weight, and the Senate calculated in this, as it ought to be in every Government, to represent the wealth of the nation." To these two branches Pinckney added what he terms "a council of revision, consisting of their executive and principal officers of government," and further on in the speech, in defining the duties of the executive, he somewhat elaborates his idea by adding that the President "will have a right to consider the principals of each Department"

("Home, Foreign, War, Treasury, and Admiralty") "as his council, and to require their advice and assistance whenever the duties of his office shall render it necessary. By this means our Government will possess what it has always wanted but never yet had, a cabinet council." The draft contains not a word concerning this council, which, so far as I know, is the first suggestion of the body unrecognized by the Constitution, but since so familiar a feature of our Government.

To follow the sequence of the speech, in preference to the draft, Pinckney elected the President septennially, without limit upon his reëligibility, adding, "I shall have no objection to elect him for a longer term," while the draft sets no term of office. He was to be removable by impeachment, but by what power is not mentioned, thus again departing from the draft, in which impeachment was to be instituted by the lower house and adjudicated by the Supreme Court. As another variation from the draft, no provision is made for a substitute in case of the death of the President. Apparently he was given no power of appointment, and, more curious still, there is nothing to show by whom he was elective, though a reference to his similarity to the President of Congress suggests that he was to be named, as was that officer, by Congress.

The fourth article, as summarized in the speech, gave to the national Government alone the right of granting citizenship, and decreed the delivery of fugitives from justice "exactly upon the principles of the fourth article of the present Confederation," except that the demand of the executive of a State for "any fugitive, criminal offender shall be complied with," thus extending this clause to cover fugitive slaves. The fifth article, Pinckney tells us, was "founded on the same principles as the sixth of the Confederation," and the absolute difference of these two clauses from the clauses in the pseudo-draft indicates how entirely different they are not merely in principle, but in construction.

But the most extraordinary and radical difference occurs in the next or sixth article. In the words of the speech, this was "intended to give the United States in Congress not only a revision of the Legislative acts of each State, but a negative upon all such as shall appear to them improper." In favor of this clause Pinckney said:

"I apprehend the true intention of the States in uniting is to have a firm national Government, capable of effectually executing its acts and dispensing its benefits and protection. In it alone can be vested those powers and prerogatives which more particularly distinguish a sovereign State. The members which compose the superintending Government are to be considered merely as parts of a great whole, and only suffered to retain the powers necessary to the administration of their State Systems. The idea which has been so long and falsely entertained of each being a sovereign State must be given up; for it is absurd to suppose there can be more than one sovereignty within a Government. The States should retain nothing more than that mere local legislation which, as districts of a general Government, they can exercise more to the benefit of their particular inhabitants than if it was vested in the Supreme Council; but in every foreign concern, as well as in those internal regulations which, respecting the whole, ought to be uniform and national, the States must not be suffered to interfere. No act of the Federal Government in pursuance of its constitutional powers ought by any means to be within the control of the State legislatures; if it is, experience warrants me in asserting, they will assuredly interfere and defeat its operation. . . . Whatever views we may have of the importance or retained sovereignty of the States, be assured they are visionary and unfounded, and that their true interests consist in concentering, as much as possible, the force and resources of the union in one superintending Government, where alone they can be exercised with effect. . . . If it was possible completely to draw the distinguishing line, so as to reserve to the States the legislative rights they ought to retain, and prevent their exceeding them, I should not object, but it will be found exceedingly difficult; for, as I have already observed, leave them only a right to pass an act, without revision or control, and they will certainly abuse it. The only mode I can think of, for qualifying it, is to vest a power somewhere, in each State, capable of giving their acts a limited operation, until the sense of Congress can be known."

The seventh article proposed "to invest a number of exclusive privileges delegated by the present Confederation," to which was added, "an unqualified power of raising troops," . . . "of regulating the trade of the union, and of levying imposts and duties," but with a limit on the "percentage of the impost." This section also contained "a provision for empowering Congress to levy taxes upon the States, agreeable to the rule now in use, an enumeration of the white inhabitants and three-fifths of other descriptions," the context making still more plain that Pinckney intended no "direct" tax on the people or property, but the old system of assessing quotas on each State. This shows the absolute falsity of the much quoted section of the draft dealing with direct taxes.

The eighth article, Pinckney tells us, "only varies so far from the present [*i. e.*, of the Confederation] as to permit Congress drawing a revenue from the post-office."

The ninth article, "respecting the appointment of federal courts for deciding territorial controversy between different States, is the same with that in the Confederation."

The tenth article "gives Congress a right to institute all such offices as are necessary for managing the concerns of the union," and for erecting federal courts.

Then follows a hiatus in the enumeration of the clauses. The sixteenth article provides for a revision of the Constitution by consent of a given number of legislatures, and the wording suggests that Pinckney intended that the new Government should be referred to Congress and to the State legislatures, thus contradicting the draft, which referred it to conventions of the people, though, in summing up the defects of the Articles of Confederation, Pinckney distinctly referred to the fact that the faults of that Government were largely due to the fact that it had "nothing more, strictly speaking, than a legislative authority, and might be said in some measure to be under the control of the State legislatures." The number required to amend was such as would comprise a majority of the people as well as a majority of the States. Furthermore, on all important questions in Congress, Pinckney required the assent of two-thirds of both houses.

The seventeenth article is specially interesting because of the omission of its clauses from the Constitution as adopted, and their almost immediate enactment in the first eleven amendments. It provided for "the privilege of the Writ of Habeas Corpus, the trial by Jury in all cases, criminal as well as civil, the Freedom of the Press, and the prevention of Religious Tests as qualification to Offices of trust or emolument."

Such were the main outlines of Pinckney's propositions, but a number of minor points which he comments upon, without referring to their position in his plan, are worth noting. He gives to Congress the exclusive right of "coining money," and clearly meant to prevent issues of paper money, for he declares that all payments to the national treasury should be in "actual money"—a radical distinction from the draft, which gives Congress the power "to emit bills of credit." He also gives to the Federal power "the exclusive right of establishing regulations for the Government of the Militia." Another clause permits the admission of new States, and what is perhaps more striking is the addition of an article "authorizing the United States, upon petition from the majority of the citizens of any State, or convention authorized for that purpose, and of the Legislature of the State to which they wish to be annexed, or of the States among which they are willing to be divided, to consent to such junction or division." Other clauses gave Congress power to select a capital, to establish a national university, and to grant patents and copyrights.

Not the least curious difference in the two papers, as the slightest examination shows, was that the true plan submitted by Pinckney, though designed to be a sovereign Government, was really nothing more than a redrafting of the Articles of Confederation, and thus differed radically in form as well as in matter from the pseudo-draft and from the Constitution as adopted. Yet it is an interesting document, as revealing the probable source from which many details of our national compact were drawn; and since no authentic copy is extant, this rare pamphlet, which outlines so much of it, should be far better known, while the fabricated draft, instead of being quoted by our Supreme Court, should be relegated to the repository of historical lies.

Paul Leicester Ford.

THE SALONS.

Paris, May, 1895.

The visit to the Salons explains why, lately, French writers on art in search of a sensation have been compelled to cross the Channel and discover Pre-Raphaelitism. In Paris there is no new fad, no new movement; there is not even the once inevitable picture of the year to serve as text upon which to hang an article. Judged from the exhibition standard, which makes novelty, extravagance, or eccentricity the measure of success, both collections this year are unusually dull and insignificant. Nor from the standpoint of art are they to be much more favorably commended. Without question, genuinely good work is in the minority, and what little there is has found its way chiefly to the Champ-de-Mars.

To go direct from the Royal Academy and the New Gallery to the Salons is to be struck with the immense amount of ability and energy everywhere displayed in the French shows. In England, only too often, the man who is most prolific has never mastered the elementary principles of his trade; while he who does know how to paint is so lacking in vitality that two or three sketches represent his year's labors. Among Salon exhibitors, however, genius for industry and technical ability go hand in hand. It is all the more irritating, therefore, to find the results obtained so tinctured with commonplace, so wholly without distinction. This is the immediate impression received upon entering the first large gallery at the Champs-Élysées. Opposite the main doorway, in presumably the place of honor, hangs a gigantic painting of the siege of Toulouse in 1218, by M. J. P. Laurens. There is no doubt of the research, the knowledge, the industry revealed; but to

what purpose, since there is not a suggestion of beautiful color, of beautiful form, of beautiful composition? The arrangement of the wall, and scaffolding, and workmen is so prosaic as to suggest the camera, and yet, necessarily, it has not even the value of photographic accuracy. And so it is with M. Gervais's canvas, which claims generous wall-space in the same gallery—it is learned, it is scholarly, it is well painted; but it is nothing more than a good, straightforward, life-size study of a model, christened "Maria de Padilla," as an excuse for the nude figure and the southern background—the Alhambra this time—in which it is set. And so one might go on through the list, now wondering why M. Detaille, in painting the Prince of Wales, should have been so engrossed in getting a good likeness as to forget his picture; now amazed at the effrontery of M. Béroud in calling a shameless and vulgar display of upholstery and naked women a "Symphonie en rouge et or"; and constantly deploring the opportunities wasted, for many of these big canvases are designed for definite ends, and will eventually disfigure the public buildings they should have decorated.

Matters, in this respect, are somewhat mended at the Champ-de-Mars. Here, though not one of the large paintings shown may be an unqualified success, several are not without interest. Max Klinger, the German mystic, attracts by the power and individuality in his conception of such well-worn themes as the Crucifixion and the Judgment of Paris, even while he repels by a curious hardness in the treatment, an indifference to beauty, an absence of all atmosphere, so that his figures seem to jump violently from out their pictorial environment, and, in the case of the Judgment of Paris, by the frankly hideous architectural device which he has seen fit to give it as frame. M. Lhermitte astonishes by the realism of his rendering of "Les Halles," a realism vying with that of M. Zola's written description; but a sacrifice of actual truths to decorative needs would have better adapted it to the walls of the Hôtel de Ville for which it is intended. M. Roll charms by the gay sunlight and graceful nude women in his "Joies de Vivre," but his design, with its mul titude of motives, is unpleasantly wanting in unity and repose.

When all is said, however, it was really M. Puvis de Chavannes's decoration for the Boston Public Library which interested me the most, in the first place because it is M. de Chavannes who painted it, in the second, because of the building which it is ultimately destined to adorn. No one in America has as yet done so much in the cause of mural decoration as the directors of the Library in question. The work already completed by Mr. Sargent and Mr. Abbey is necessarily, to a certain extent, experimental. But the Frenchman is a past master in the art of decoration, and remembering Amiens and Rouen one has waited eagerly to see his design. I must confess that, where it now hangs, it is not altogether satisfactory. The light streams pitilessly upon it, when, no doubt, its illumination in the Library will be much more sober and severe. For subject it represents the Muses hailing the Genius of Light. The figures, white-robed, bearing lyres and roses, ascend from pale slopes overlooking a brilliant blue sea; and the blue of the water breaks somewhat violently the quiet harmony of pale grays and greens, while the draperies seem so many detached white surfaces. But in a more subdued light, in its appropriate architectural setting, no doubt present abruptness will disappear, and the now violent blue and whites will be found to tell most effectively. There will be no wasted detail, as one feels may be the case in Mr. Abbey's Holy Grail series; there will be no unexpected mingling of decorative and realistic methods as in Mr. Sargent's ceiling. It remains but for Mr. Whistler to complete his design to make the Boston Library as important in modern America as the Vatican was in the Rome of the Renaissance.

These large canvases assert themselves by mere force of size. But good work will not let itself be quite overpowered by brutal vulgarity or meretricious banality, and often the pictures which are least ambitious in dimensions are most conspicuous in effect. In the old Salon the simple landscapes of Pointelin, now a broad sweep of gray moorland, now a quiet mountain pool, or the dignified conventions of Harpignies and Français, attract the eye to them at once. Row upon row of the student *machines*, bidding for notice, are forgotten for the reticent "Bathers" of Fantin-Latour; for the well known "Salon de Madame Récamier," by Orchardson, fine, though the Parisian protests against the English character of the faces; for the portrait of an old woman by Henner; for the portrait of a Dutch family by Mr. MacEwen, who has never done anything better than this simple group of father, mother, and child sitting peacefully in a room whose beauty depends, not upon studio properties, but upon the sympathetic study of light and atmosphere.

It is the same in the new Salon, where aggressive experiments and problems in paint lose by the comparison with the suave restraint of Cazin in his landscapes; with the genuinely beautiful color of Alfred Stevens in his marines, and in those wonderful little figures, as lovely in detail as the women of Terburg; with the rhythmical lines and suggestion of mystery in Carrière's "Théâtre Populaire," as individual and poetic an impression of the interior of a theatre as any painter has yet given. It is the ballet-dancer on the stage who has charmed M. Degas with the poetry of movement and color; but in the audience M. Carrière has sought his motive in the unconscious posing of men and women at a moment of emotional excitement, in the subtle effects of light and shadow seen through the thick atmosphere of the play-house. M. Carrière's return, after his absence of last year, is all the more welcome since this spring Mr. Whistler sends nothing, and M. Raffaëlli and M. Boldini are also unrepresented. Nor does M. Jean Béraud contribute the usual sensations, M. Carolus-Duran the usual portraits, while M. Besnard, in his studies of southern light, seems all too determined to startle; on the other hand, M. Aman-Jean seems to be devoting himself less to mysticism and more entirely to portraiture (though as a beautiful arrangement of a peacock and a girl in golden-flowered gown explains, at no sacrifice of the decorative conventions and the refinement of color always felt to be such a charm in his pictures).

The Glasgow school makes a strikingly strong showing; Mr. Lavery, Mr. Guthrie, and Mr. Walton sending portraits which appear no less distinguished in Paris than they did at home. M. Gandara's presentment of Madame Sara Bernhardt has, naturally, attracted much attention, though in her long white satin gown she might pass for but a re-echo of the tall, white-robed Princess of a year ago—a fact of which M. Gandara may be conscious, for, in proof that his undoubted ability is not restricted to the painting of satin, he hangs on either side curious little still-life studies; a skinned rabbit yielding a pleasant note of color. Mr. Alexander is also once more to the fore, but his new portraits tend somewhat too much to the eccentric. There is one in particular, of a woman in voluminous blue skirts, out-spreading as if over-exaggerated crinoline or blown about by a small hurricane, in which he seems to be challenging astonishment. It is clever, no doubt, but it lacks the repose and dignity which hitherto have characterized his canvases. His small sketches are more successful, because less extravagant in pose and arrangement.

Frenchmen are just now threatening to rebel against the continued prominence of foreigners in their exhibitions. This would be foolish, indeed, for it is chiefly the international scope of the Salons which has been the secret of their accepted importance. True, the strangers are many, but so they have been almost since there were Salons in which to exhibit. The American contingent has ever been large, and I do not think its members are now more excessive than in past years. Again, at the old Salon, besides the pictures of Mr. MacEwen, you may see the careful studies of cattle by Mr. Bisbing, the Eastern subjects of Mr. Bridgman, and the accustomed contributions of Mr. Picknell, Mr. Boggs, Mr. Ridgway Knight, Mr. Pearce, Mr. Walter Gay. Again, at the new Salon, Mr. Alexander Harrison has his marines, one or two bordering upon the grotesque in the figures introduced; Mr. Dannat offers new variation of his old theme of Spanish women and blue shadows, though he seems about to desert it for the painting of portraits, where his aggressive mannerisms could not so well be countenanced; and Mr. Rolshoven shows portraits that are not without vigor, though they might, to their advantage, gain in refinement. Mr. Humphreys Johnston is unusually strong, and if the "Domino Rose," the most striking of his six canvases, savors still of the experimental, it is a triumph of skill in the treatment of an extremely difficult color. Mr. Melchers remains faithful to the record of costume to which he so frequently is willing to sacrifice his picture, but he has improved vastly in his painting of flesh. Instead of distributing impartially the same rather leathery skin to each and all of the people in his pictures, he now respects the differences presented by sex and age and individuals, and there is an excellent family group of peasants to mark his progress. For the rest, Mrs. MacMonnies contributes two examples of her sound knowledge of the requirements and limitations of purely decorative painting, and Mr. Tiffany shows himself supreme among the designers of stained glass. It is to be regretted that Mr. La Farge did not prefer to exhibit more of his beautiful glass and fewer of the Japanese sketches and pictures for which a special gallery has been set apart. These do not show him at his best when, as Parisians unfortunately do not know quite so well as New Yorkers, he is a decorative artist of rare distinction.

Among the sculptors, Americans have also distinguished themselves—not at the Champ-de-Mars, where there is little to note save the collection, in a separate gallery, of Carriès's life-work, the tomb by M. Bartholomé, portions of which have been exhibited in previous Salons, and a couple of busts by M. Rodin. But at the Champ Élysées, Mr. Frank Duveneck makes his first appearance as a sculptor, and has achieved an immediate and very striking success. His design cannot rival M. Bartholomé's

in elaboration, for it is simplicity itself, but it expresses even more perfectly the serenity and majesty of death. There is both genuine feeling and masterly modelling in the figure of the woman who lies outstretched upon the simple low tomb, her hands folded, a palm branch to one side, resting gently on the flowing draperies. Mr. Duveneck has never revealed so fine a sense of beauty in his painting. Mr. MacMonnies's model for the statue of Shakspere, later to grace the National Library in Washington, promises impressiveness, though the figure is not so accomplished as the delightfully modelled head. Of the many Joans of Arc which the year has brought forth, M. Dubois's is by far the most satisfactory, though, as an equestrian statue, it cannot but invite comparison with Frémiet's masterpiece in the Place des Pyramides, and suffer in consequence. Nothing else in the large court is so noteworthy, save the bas-reliefs by M. Falguière.

In both Salons, especially in the Champ-de-Mars, more than the accustomed space is reserved for decorative work—the *objets d'art* of the Catalogue. In both, in the black-and-white sections, the prints are much more remarkable than the original drawings. At the Champs-Élysées M. Baude and M. Leveillé, Mr. Cole and Mr. Wolf carry off the honors among the wood-engravers; M. Dillon and M. Fantin-Latour, M. Roedel and M. Willette among the lithographers. At the Champ-de-Mars there is less rubbish, and the proportion of good work is larger. M. Florian shows marvellous wood-engravings after M. Renouard's pencil sketches. M. Valloton, M. Jeanniot, and M. Lepère amuse by their original and vigorous wood-cuts. M. Lunois and M. Auriol have made vast strides in advance in the printing of lithographs in color. And Max Klinger is now included among the etchers. N. N.

Correspondence.

RECTIFICATIONS.

To the Editor of The Nation:

Sir: In the review of Lord De Tabley's poems in your number of yesterday, his picture of Cleopatra is justly described in no complimentary terms. But your reviewer seems not to be aware that the noble writer was not thinking of Shakspere at all, but "transmuting" directly from Horace, whose wild and joyous rush of denunciation in the thirty-seventh ode of his first book assumes the curiously stiff and labored step of Lord De Tabley's quatrains.

The review of Bishop Clark's 'Reminiscences' leads me to point out the recurrence in his pages of one never-ending blunder of American writers. The Bishop speaks of Mr. Charles Astor Bristed as distinguished at *Oxford*. One would think that a Bishop of the Protestant Episcopal Church might be aware of the existence of the University of Cambridge—the Alma Mater of the present Archbishop of Canterbury. W. E.

Quincy, Mass., June 7, 1895.

Notes.

A circular recently issued by the Historical Society of Pennsylvania to its members asks contributions or a guarantee to the amount of $2,000 per annum for five years, for the purpose of obtaining a full copy of the Journal of the Board of Trade from the original in the English Public Record Office. "Having worked much in this very series," says the writer of a private letter, "I do not hesitate to assert that they constitute the most important existing collection of manuscripts relating to America during the colonial period. Especially important is the Journal, for it contains the day-to-day proceedings of what was practically the supreme executive of the American colonies, and alone makes possible a clear understanding of many important historical manuscripts that, taken by themselves, are apparently meaningless. Before this body came nearly every person prominent in American history, to argue or give evidence on some subject; the commercial policy of Great Britain, which so largely caused the Revolution, was shaped in it, as was also the action on the western colonies and the sequestration of the western lands, which, carried to its extreme in the Quebec act, was another of the potent causes of our Revolution; and, indeed, its action on American laws, paper money, bounties, and many other subjects is as vital for an understanding of the colonial period, so far as the government of the colonies and their relations with the mother country are concerned, as the federal reports are for an understanding of the United States statutes at large."

Lamson, Wolffe & Co., Boston, will have an American edition of Ferd. Ongania's 'Art of Printing in the Renaissance.'

The Century Co. are about to issue the Life of Sonya Kovalevsky, by the Duchess of Cajanello, together with the great mathematician's recollections of her childhood, translated by Miss Hapgood; also Mrs. Burton Harrison's 'An Errant Wooing.'

'The Ameer Abdur Rahman [of Afghanistan],' by Stephen Wheeler, is the first of Frederick Warne & Co.'s "Public Men of To-Day; An International Series." 'Li Hung Chang,' by Prof. Robert K. Douglas, will come next.

Further announcements by Macmillan & Co. are 'The Climates and Baths of Great Britain'; 'Catholic Socialism,' by Prof. Francesco S. Nitti; a clerical autobiography, 'Fifty Years, or Dead Years and Living Deeds,' by the Rev. Harry Jones; and 'Off the Mill,' a holiday tour of Switzerland, by Canon Browne, of St. Paul's. Publication of Jules Marcou's Life of Agassiz has been postponed till September; and to the autumn will also be relegated John La Farge's lectures on art, and Prof. Edward Channing's 'The United States of America, 1765-1861.'

An interesting title is 'Southern Statesmen of the Old Régime,' by an instructor in the new, Prof. William P. Trent of the University of the South, Sewanee, Tenn. The work will be published by T. Y. Crowell & Co.

Ginn & Co. have nearly ready 'A Short Constitutional History of England,' by Henry St. Clair Feilden, and a 'History of Greece,' by Philip Van Ness Myers.

The second volume of 'Moods: A Journal Intime,' is on the eve of issuing from the Jenson Press, 810 Sansom Street, Philadelphia. Later in the summer, 'Bookplates: An Historical Sketch,' by Charles Dexter Allen, will proceed from the same source. Both works will be printed in the type of Nicolas Jenson, and will be illustrated.

Sir Walter and no end. Two editions of the Waverley Novels have been vying with each other during the past year, and now a more modest but most welcome reprint is begun by Archibald Constable & Co., London. Here the handy size is what first strikes us as admirable, then the scarlet cloth binding with white paper labels; within, the typography is correspondingly captivating, a clear, full-bodied letter filling a page of pleasing proportions. The contents are Scott pure and simple, for it is his favorite (Cadell) edition of 1829-33 that is followed even to the regulation steel frontispiece and title-page vignette by some of the best artists of that period, but without breaking a story in the middle of a volume. The series of course begins with 'Waverley,' and in due time (September 28, 1896) the forty-eight redcoats will all be mustered in.

Prof. Dowden's cautious recommendation of Sir Edward Sullivan's 'Tales from Scott' (Roberts Bros.) is prophetic; they are but bald outlines or syllabi of the great romances, from which the romance is well evaporated.

Another *Blackwood* débutant, John Galt, succeeds Michael Scott, author of 'Tom Cringle's Log,' in the well-chosen series of resuscitated novels which Macmillan is publishing. Of Galt's superabundant productions, 'Annals of the Parish' and 'The Ayrshire Legatees' have been coupled to make a single sample volume, possessing a real historical value for the reign of George the Third. Mr. Alfred Ainger furnishes the introduction.

From D. Appleton & Co. we have, in the "Great Commanders Series," 'General Sheridan,' by Gen. Henry E. Davies. Gen. Davies completed this volume only a little while before his death. It was evidently a labor of love, in which his regard for his commander everywhere shines out. He frankly says that it is a compilation more than a composition, for the basis is necessarily the autobiography of Sheridan, aided by other memoirs of campaigns written by comrades and friends of Davies. The result is a warm eulogy, faithful to the leading historical facts, and earnestly espousing the hero's side whenever a question arises between him and any other. The book thus becomes all the more stimulating for the casual reader, and no harm is done, for students will know where to look for the other side in disputed matters in the campaigns either of the West or of the East. The brilliant and energetic Sheridan had a personality which must always be attractive to a reading public, and Gen. Davies's presentation of it is clear, compact, and eminently readable.

'The Evolution of Industry,' by Henry Dyer (Macmillan), is a labored and tedious essay on the art of extracting the sunbeams of prosperity from the cucumber of paternal legislation. We have discovered nothing original in the book, but it presents the speculations of many writers upon social topics in a clear and systematic manner.

The French are fortunate in having two carefully made year-books of music and the drama; the British have only the insufficient *Era Almanack*. For the second time now Mr. William Archer has gathered together his year's work in dramatic criticism, and the 'Theatrical World of 1894' (London: Walter Scott; New York: Scribners) is even more elaborately prepared than its predecessor. Mr. Archer is easily the best of English dramatic critics, well equipped, possessing broad sympathies, keen insight, and an understanding of the technic of the theatre.

Mr. Archer and Mr. R. W. Lowe have made a selection of Hazlitt's 'Dramatic Essays' (London: Walter Scott; New York: Scribners), which show him at his best. Like Lamb and like Leigh Hunt, Hazlitt is a limner of

histrionic portraits, and the three together restore for us the actors of the beginning of this century, just as Cibber's incomparable 'Apology' restores for us the actors two generations earlier. Mr. Archer contributes an acute and searching analysis of Hazlitt's work.

The fact that the address given before the German Scientific Association at its meeting in Vienna last September, by Prof. Forel of Zurich, already appears in a second edition (Bonn: Emil Strauss) is an indication that it is a paper of more than usual interest. Prof. Forel is well known on account of his researches upon ants and upon hypnotism, among other subjects, and it may be mentioned in passing that he is one of the few Germans who share the Anglo-Saxon belief in the general harmfulness of alcoholic beverages. The title of his paper is 'Gehirn und Seele,' and his view may be characterized as a pantheistic monism. He believes in a universal force of which matter, energy, and consciousness are different manifestations. More interesting than his philosophical views is the general sketch which he gives of the various questions now chiefly occupying the attention of scientific men.

Two Leipzig booksellers, Paul Schulze and Otto Koller, prepared as a "Festschrift" for the celebration of Bismarck's eightieth birthday a neat volume of seventy pages entitled 'Bismarck-Literatur' (Leipzig: Grachlauer), containing a classified list of all German and the most important foreign Bismarckiana that had appeared up to the end of March, 1895, consisting of letters and speeches, occasional discourses, table-talk, "winged words," biographies, characterizations, and criticisms *pro et contra*, works on the Arnim affair and on Bismarck's retirement and its consequences, poems, plays, and humorous and satirical productions. Histories, like Sybel's 'Die Begründung des Deutschen Reiches,' are also included in the list. The voluminous octogenary Bismarck literature that has been published since April 1, will doubtless be considered in a later edition of this interesting bibliography, the practical value of which is greatly enhanced by an excellent index. The retail price of each work is also given.

'Le Homestead aux États-Unis' (Paris: Guillaumin & Cie.) is the title of an elaborate treatise by the French statistician and economist L. Vacher, on the American homestead in its legal, moral, political, economical, and social relations to the community at large, to sailors, soldiers, Indians, and the general development of the industry of the country. The author makes comparison of this institution with the English manor, the German Hofrecht, and the Russian Mir. The lack of an index in such a work is painfully felt.

According to an estimate made by the Swedish Bureau of Statistics, the Swedish language was used at the beginning of this year by about 6,300,000 persons. This is based on the last general census, which showed the following geographical distribution of Swedish-speaking people: in Sweden 4,750,000, Finland 325,000, Norway 38,000, Denmark 34,000, Germany 12,000, the rest of Europe 10,000, America (by which is meant both continents) 770,000, and a scattering of a few thousands in other parts of the world. Of special interest in this report are the figures connected with Finland, which show that, in spite of the Russian encouragement of the native language, Swedish is still spoken by over an eighth of the entire population.

The jubilee of the sailing of Sir John Franklin's Arctic expedition has just been celebrated in London. Mr. Clements Markham gave an interesting sketch of Franklin's life and services, among which was the boarding and capture of a United States gunboat at New Orleans while commanding the boats of H. M. S. *Bedford*. Sir Leopold M'Clintock, who accompanied at least four of the search expeditions, testified to the admirable order and discipline which manifestly had prevailed with Sir John Franklin's crews. He closed by saying that "the generous and sympathetic help of our American kinsmen throughout the whole of the Franklin search marked the beginning of that drawing together of the two great nations which was so striking a feature of the present day, and of which our children might hope to reap the whole fruition."

The English Government has at length been goaded into taking some decided action in regard to slavery in Zanzibar. For years attention has been persistently called to the fact that large numbers of slaves are annually imported from the mainland to the island of Pemba to work in the clove plantations. The jealousy of supervision on the part of the Arab planters has hitherto prevented any official examination of the manner in which they treat their slaves, although the mortality among them is notoriously great. It is apparently almost impossible for a white man to set foot on the island. In a report by Mr. A. Hardinge, the British Consul-General, upon the whole question of slavery in the Protectorate, he suggests a registration of the slave population at present in the islands, the establishment of a coast-guard patrol officered by Englishmen, and a penalty for "raw slave trading" of imprisonment for life. A policy of immediate abolition is deprecated mainly for fear of its disastrous effect on the financial position of the Sultanate.

The Atlas of the State of New York just completed and issued by Julius Bien & Co. will supersede all others till the State itself undertakes one in emulation of New Jersey's example. The great folio opens with an index to places, and the first map is that of the United States, followed by New York on a scale of one inch to twelve miles, and by the several counties on a scale of one inch to two and a half miles. There is, besides, a map of land-grant patents and purchases, labelled in red, on a scale of one inch to fifteen miles. These are not contour maps, but the roads are laid down, and in every way the Atlas is a desirable possession. New York, Brooklyn, Albany, Syracuse, Rochester, and Buffalo are mapped on separate sheets. There are also shaded maps of the State for rainfall, temperature, elevation, and population, besides some graphic statistics. The engraving possesses the excellence of the best work of the house to whose enterprise we owe the Atlas, as well as the more detailed Atlas of the Metropolitan District.

A widespread interest attaches to the third volume of the final report of the State Geologist of New Jersey on 'Water-supply, Water-power, the Flow of Streams, and Attendant Phenomena.' This laborious work has been prepared by Mr. C. C. Vermeule, consulting engineer of the survey, and, as an exhaustive study of the subject for New Jersey, leaves nothing to be desired. The watershed of every significant stream is examined in detail for its flow, ground-flow, evaporation, liability to drought, purity and potability of its water, water-power actually employed and potential. Local flow and low-water gaugings have been compared with those of other streams more or less analogous in other States, and a large array of tables and formulas originally computed by Mr. Vermeule furnish the most valuable basis extant for the calculations of water engineers in any section of the Atlantic coast at least. No other State certainly has been so thoroughly explored in a scientific manner as New Jersey can now boast of being, in the vital matter of water-supply for a rapidly increasing and dense population. Mr. Vermeule's report is accompanied by maps, diagrams, and pictorial illustrations. A list of mills and net horse-power by watersheds and by industries, another of drainage areas, forested areas, and population (in 1880) of stream basins, and one of surface and drainage area of lakes and ponds, complete this indispensable work of reference.

The seventeenth annual report of Mr. W. E. Foster of the Providence Public Library shows a gratifying gain in both the number of volumes in the Library and their use. The slight falling off in the percentage of fiction read and the increase of the works of history issued indicates the development of interest in the more solid departments of literature. This fact is the more noteworthy as there is apparently no age restriction on the use of the Library by the school-children. Some progress has been made towards the obtaining a new building for want of which the work of the Library is seriously crippled. It is with some hesitation that we express a doubt as to the expediency of printing a long list of donors, many of whom give only pamphlets, in some cases apparently mere advertisements.

—Previously begun articles excepted, there is nothing in the June magazines so striking as Thomas A. Janvier's eye-witness account in the *Century* of the festival performances last August of the Comédie-Française in the old Roman theatre at Orange. Government patronage and M. Jules Claretie have together put the final stamp of success on the work of the two societies of the Félibres—the Félibrige and the Cigaliers—in reviving in their own *Midi* a classic form of the drama in the noble building which they have partly restored and partly left in the majesty of its ancient ruin. The fact that the Provençal poets are encouraged by the enthusiasm roused by this presentation of the "Œdipus" and the "Antigone," under the conditions of positive sublimity described by Mr. Janvier, to hope that the Roman theatre of Orange, "again perfect, shall become the home of the highest dramatic art, and a place of periodic pilgrimage, biennial or even annual, for the whole of the art-loving world," has for readers at large an interest which cannot fail to be stimulated by the delightful illustrations and ample data of this article. Aesthetic interest, in this case pleasantly tinctured with a patriotic feeling of possessorship, must likewise be stimulated by the excellently pictured and written description of the new Boston Public Library. Mrs. Van Rensselaer presents the architectural claims of this building, whose series of mural decorations have for months past been the theme of universal comment, and Mr. Lindsay Swift, of the librarian's department, makes the reader acquainted with principles in accordance with which vast collections of books must, to be accessible, move and have their being. An instructive antithesis in points of view is offered by the juxtaposition of Mr. Howells's "Tribulations of a Cheerful Giver" with Josiah Flynt's "Two Tramps in England." The latter writer as usual, after having temporarily identified himself with the class he is studying, makes a literal transcript of its qualities, and confines his conclusions re-

garding it within the briefest limits—in this instance to the single sentence, "The professional beggar should be shut up indefinitely." If this consummation should ever be accomplished, there would be no further opportunity for Mr. Howells's graceful whimsies of emotion and logic on the subject of almsgiving. In Mr. Howells's view, the giver is, as a matter of course, he who easily drops the dole of a coin into an outstretched palm; in the more strenuous view of the new charity the only giving humanely permissible is of time, pains, and personal service. Both fiction and verse in this number of the magazine are more than ordinarily good, while in the account of the discovery of Glacier Bay, by John Muir, may be found the several attractions that belong to a narrative of adventure and peril, personally recorded, and imbued with the spirit of national extension in the best sense of the word.

—The same and other kindred merits are also to be found in the one article which this month scores a marked success in *Harper's*. In his description of the hand-to-hand encounter with the Indians from which he and a remainder of his scouts narrowly escaped with their lives, Gen. Forsyth gives his readers a sensation as nearly that of listening to a *viva-voce* narrative as the printed page ever vouchsafes to the fascinated attention; the frontier fight of a quarter of a century ago becomes vividly present, as its survivor rehearses its mingled picturesqueness and horrors, while doing a soldier's justice to his comrades by name, no less than to the warrior, Roman Nose, whose requiem he writes. Otherwise, although Mr. Lang dallies a while with the subject of his national game of golf, and President Low touches upon the pregnant question of combinations among workingmen and combinations among capitalists, the composition of the number is such as inevitably to call up the suggestion that readers must read, even when writers have little or nothing to write.

—The sum total of the current *Scribner's* amounts, as far as finished papers go, to not much more than another version of the same sad though indisputable fact. If the burning subject of bicycling has not been exhausted at the hands of the three illustrators and the four writers who treat it symposium-fashion, it has at least been brought to a point where a temporary lull in discussion will not be ungrateful to readers whose thoughts still incline to more than one line of locomotion. Medical endorsement of the exercise for men and women alike, under restrictions of common sense for both, is supplied by Dr. J. West Roosevelt. In the short story, "A Coöperative Courtship," by Annie S. Winston, interest is kept alive by the fortunate mixture of naturalness and ingenuity that serves, now and again, to give a saving measure of freshness to the purely commonplace. The next number of the magazine will bring to a close Mrs. Humphry Ward's artistic docket of a new female offender.

—In the *Atlantic*, William Sharp's reminiscences of Christina Rossetti will be turned to with eagerness, and will perhaps be laid down with a shade of disappointment in the individuality portrayed. The writer's acquaintance with Miss Rossetti did not begin until she had entered at once upon middle age and upon the sadder, lonelier, and more self-repressed stage of her life. Others who knew her earlier have given a brighter, if less saintly, view of her personality. Mr. Sharp's description, however, of a chance meeting with her, at a house in Bloomsbury, and of the voice and accent of his unknown fellow-visitor, whose "words came away from the mouth and lips as clearly as a trill from a bird," gives as charming an impression of the poetess as her most ardent admirer could wish. Disappointment, again, almost certainly awaits the reader who is accustomed to turn with high expectations to this magazine's educational articles, in the paper by Prof. Corson on "Vocal Culture in its relation to Literary Culture." Of all forms of culture, none is in more pressing need of incentive in our own country than the culture of the voice in any and all of its relations, but this is, unfortunately, a paper not likely to do more than excite an amiable assent to its generalities. For the best of the *Atlantic*, readers must, this month, look among its uncompleted articles.

—Affixed to the fourth volume of the new edition of Poe is a welcome bibliography of the Tales, with notes. The editors quote statements of the author as to the number of tales he had written, and, as they have not been able to find so many, express the opinion that his figures are incorrect. We are not so sure of this. One of his stories, "The Visionary," appeared anonymously in the *Lady's Book* (not then known as *Godey's*) in January, 1834, and was thus, so far as is known, the second in order of publication. The editors make it the sixth, being unaware of its appearance before July, 1835, in the *Southern Literary Messenger*. And although Poe is not known to have acknowledged them, by reprinting or otherwise, we fancy that other tales from his pen are to be found in the *Lady's Book* of this period. They may be unworthy to associate with his later stories, but we think no other person in America could have written "The Maniac's Story" (September, 1833), "The History of a Hat" (August, 1834), "The Duel" (October, 1834), or "The Prima Donna" (December, 1834). Poe is also known to have published articles, never reprinted, in two periodicals of which no copies can be found, while the editors have failed to find the first place of publication of some which have always been included in his works. Thus, they suppose what they call "Mystification (Von Jung)" to have appeared first in 1840, place unknown. They will find it in the *American Monthly* (June, 1837), where it is called "Von Jung, the Mystific." This date makes its place in order of date fifteen instead of twenty-four. "The Angel of the Odd" they guess to have been published after February, 1845, but it was issued in the *Columbian Magazine*, October, 1844. As the editors traced another tale to this magazine for August of that year, it is strange that they overlooked this. "The Sphinx," which they suppose to have appeared in 1849, will be found in *Arthur's Magazine* for January, 1846.

—The series of articles by Téodor de Wyzewa on life and manners in Germany, which appeared some years ago in the *Revue des Deux Mondes*, have now been issued in a volume entitled 'Chez les Allemands, l'Art et les Mœurs' (Paris). It is evidently the author's intention to treat the subject in an unprejudiced manner, but the tendency to draw general conclusions from limited observations often leads him into queer errors. In the eyes of a Frenchman everything that is not Parisian is provincial. Wyzewa looks at Germany from this point of view, and his division of the whole empire into two parts, Berlin and *la province*, is fatal to any proper appreciation of the numerous independent centres of culture outside of the capital. It is impossible that Berlin should ever exercise over Dresden, Leipzig, and Munich the preponderating influence that Paris does over Tours, Mâcon, Lyons, and other French cities. He relates that on one occasion a young lawyer invited a few gentlemen to dinner; his wife, however, did not appear at the table, but ate with the servant in the kitchen. From this instance he infers that German husbands regard their wives as playing the same part socially as beer and tobacco. He seems to imagine that the grisette is as much of an institution in German university towns as in the Latin Quarter, and wonders that the students never speak of her, interpreting this silence as another proof of slight esteem for the fair sex. He expresses his great admiration for the quickness and skill with which all the newest inventions are practically utilized in Berlin, whither, he says, men of other nations must go if they wish to see the actual workings of the most recent achievements of science, industry, and education. He doubts whether any American city is in these respects ahead of the imperial metropolis on the Spree. And yet, with all these advantages, it is a cold, unsympathetic, and unlovable place, made, as it were, in the very image of the Prussian himself, who is thoroughly uncongenial not only to foreigners, but also to natives of other parts of Germany, however much they may appreciate his intelligence and energy of character. Doubtless this view will be endorsed by many persons competent to form an opinion on the subject. On numerous other points Wyzewa's statements, even when they contain a kernel of truth, are altogether too sweeping, and in some cases utterly false.

—Hedwig Bender, whose philosophical writings are well known in Germany, gives, in a late issue of Virchow's "Collection of Popular Scientific Lectures," an interesting account of Luise von François, a writer of novels and short stories who is unfortunately little known in this country, but who well deserved the high reputation which she attained in Germany. Karl Hillebrand pronounced her principal novel, 'Die letzte Reckenburgerin,' to be a "work which stands alone in our literature," and Fritz Reuter loved it so much that he kept it constantly lying on his writing-table. The author herself had rather a melancholy life. For twenty years she was the sole dependence of a blind father and a bed-ridden mother, and her first writings were undertaken for the purpose of adding to the frugal means of support of this afflicted family. Her long confinement in a sick-room ended by making her averse to ordinary social intercourse, but she found much consolation throughout her life in a number of remarkable literary friendships—notably with Konrad Ferdinand Meyer and Marie von Ebner-Eschenbach. It is, by the way, rather remarkable, considering how depressing an effect upon genius the general attitude towards women must have in Germany, that so large a proportion of the best part of current literature is produced by them. Ossip Schubin surpasses most of the novelists who write in German in that *verve* and lightness of touch which the Germans do not always know how to appreciate when it is given to them, and her 'Gloria Victis' is a novel of very great dramatic power. It now appears that Fanny Groeger, whose four short stories, just issued, have created such a rage in Berlin, is, like her, an Austrian of high social position.

PATER'S GREEK STUDIES.

Greek Studies: A Series of Essays by Walter Pater, late Fellow of Brasenose College. Prepared for the Press by Charles L. Shadwell, Fellow of Oriel College. Macmillan. 1895. Pp. ix, 319.

A POSTHUMOUS collection of essays is too often a bundle of chaff to be floated on the flood-tide of a reputation. Mr. Pater left no chaff to be misused by partial friends or designing publishers. Whatever may have been his faults, carelessness (*otiosity*, as he might himself have called it) was not among them. He took nothing in hand, however slight, which he did not make his own by careful thought and conscientious workmanship. He was not content simply with accurate learning and scholarship; he aimed always at presenting his results in a finished and suitable form, as a work of art.

The papers here collected by Mr. Shadwell, though published at long intervals beginning with 1876, have a general unity of purpose and conception. They deal with Greek art and with some special topics in mythology; but they acquire a special charm and value from the author's individual mode of treatment. Amid the shoals of treatises on the myth of Dionysus, for example, Mr. Pater's study has its own distinct and permanent usefulness because, starting with facts and theories that are now the common property of scholars, it arranges them in order and evolves from them an organic whole; it traces out the development of the myth by the aid of an imagination at once poetic and scientific. His method, so subtle and delicate, moving within careful limits, illuminates a subject that is difficult to our modern minds because so far removed from our modern thoughts and ideas. Myth-making is a process not easily comprehended by matter-of-fact people; it is a poetic process, and is best interpreted by one who has some of the poet's gifts. Mr. Pater helps us to follow it in the myth of Dionysus by a wide range of illustrations—a range so wide as to include the cup of Galahad, or Shelley's "Sensitive Plant," or Benozzo Gozzoli's fresco of the Invention of Wine in the Pisan Campo Santo. He suggests in exquisite language the primitive connection between sculpture and mythology.

"Conceive," he says, speaking of the growth of the idea of Dionysus, "the image of an actual person in whom, somehow, all those impressions of the vine and the fruit, as the highest type of the life of the green sap, had become incorporate; all the scents and colors of its flowers and fruit, and something of its curling foliage; the chances of its growth; the enthusiasm, the easy flow of more choice expression, as its juices mount within one; as Wordsworth says,

> "'Beauty born of murmuring sound
> Shall pass into her face'—

so conceive an image into which the beauty, born of the vine, has passed; and you have the idea of Dionysus, as he appears entirely fashioned at last by central Greek poetry and art, and consecrated in the great festivals of the Wine-press and the Flowers."

It was thus that there "grew a series of wondrous personalities, of which the Greek imagination became the dwelling-place; beautiful, perfectly understood human outlines embodying a strange, delightful, lingering sense of clouds and water and sun." These personalities, these "spiritual forms," as Blake calls them, received their supreme embodiment in the drama of Æschylus, and in the Phidian marbles of the Parthenon.

The essay on the "Bacchanals" of Euripides pursues the same theme with the same poetic insight. It gives the best analysis we have yet seen of the probable temper and mixed motives of Euripides in writing his latest drama, as well as of the fantastic combination the play presents of quasi-ethical and moral purpose with picturesque and cruel religious ecstasies and orgies. The orgies of the Voudoo and the ecstasies of a Methodist camp-meeting in the South would serve as a useful modern commentary on the wild and savage rites of the troop of bacchanalian worshippers; but the vulgarity of both would give no hint of those mænad dances and encampments on the high mountain lawns which confer on the "Bacchanals" its choicest inspirations. The spirit of such scenes in a world that has almost vanished from our conceptions is perfectly conveyed in the following description (pp. 53, 54):

"Himself a woman-like god, it was on women and feminine souls that the power of Dionysus mainly fell; and so the Thiasus, also, is almost exclusively formed of women, of those who experience most directly the influence of things which touch thought through the senses—the presence of night, the expectation of morning, the nearness of wild, unsophisticated, natural things—the echoes, the coolness, the noise of frightened creatures as they climbed through the darkness, the sunrise seen from the hill-tops, the disillusion, the bitterness of satiety, the deep slumber which comes with the morning."

From such scenes and customs the imitative arts drew new motives of freedom and energy and freshness; they suggested the graceful languor of the fallen Mænad of Praxiteles, the wind-touched draperies, the rhythm and the postures on many a sarcophagus frieze and Pompeiian wall-painting. The possible connection of such ritual and such mad doings with ethics and morality is maintained by Euripides, apparently with a grave face, and is one of those puzzles which seem rooted in the perennial illogicality of the human intellect, bound fast in the chains of human emotion and associations. Religion, in its earliest forms, and ethics, have at least this in common, that both are rooted in custom and immemorial usage, and hence their sanctions become entangled and confused. The murderous issue of the "Bacchanals" is not, after all, so far removed in spirit from the butchery of an Hypatia; and each might well give rise to the indignant line of Lucretius:

> "Tantum religio potuit suadere malorum."

It is a far easier task to trace the ethical purport and associations in the myth of Demeter and Persephone, for we have the less doubtful warrant of the poets from Pindar down and the testimony of grave prose-writers as to the lessons of the Eleusinian mysteries. The history of this development Mr. Pater pursues through those phases which he has usefully defined in the growth of myth—the instinctive, namely, or half-conscious period; the conscious or literary, when the idea passes into the mind and becomes the property of the poets; and the third or ethical phase, when the story of ideal personages lends itself, under the shaping of choicer spirits, to elevated sentiments of sorrow or of awe—when Demeter, for example, becomes "the type of divine grief, and Persephone the goddess of death, yet with a promise of life to come." Such ideals and such sentiments Mr. Pater finds translated and expressed, for these deities especially, in the art of the best period. He sees in Demeter mourning for her lost daughter "our Lady of Sorrows, the Mater Dolorosa of the ancient world"; and in the Eleusinian processions and ritual an anticipation of the mysteries of the Middle Ages and of our modern pilgrimages. If it occurs to any one that such analogies cast a borrowed mediæval color on ancient life and customs, we must remember that the latest matter-of-fact methods of science point to this very mode of investigation and comparison. The mythologists are now beginning to agree that resemblances of myths and fairy-tales over the face of the globe depend quite as much on the kinship of the human mind as on imitation or diffusion. It is an old story that the early Christian Church was hospitable to pagan myths and customs; we know that the Christians of the catacombs fused the legend of Orpheus with their own symbolism, and probably borrowed some pictures of a future world from the same order of ideas. The flowers of Easter Sunday are gathered with the same thrill and the same hope that was more vaguely felt ages ago by the Greek rustic when he welcomed in the awakening spring the new birth of Persephone.

The later essays in this volume were the beginning of a series on the history of Greek art, which Mr. Pater should have lived to complete. No English scholar was better qualified by native gifts, by his special studies, and by the graces of his style to sketch an outline of the course of Greek art for laymen, which should be at once learned, sympathetic, and free from technicalities, than the author of the essay on Winckelmann and of the masterly little volume on Plato. It is true that some critics smiled at Mr. Pater's Greek accents (or his printer's), and affected to believe that no good thing could come out of the mouth of one who was guilty of a misquotation. Such critics might indeed enlighten the world on the subject of accentuation and of Platonic syntax. The fact remained that Mr. Pater had lived with his author most of his life; he knew his Plato intimately, was penetrated by his spirit, and had a mission to introduce his thoughts and personality to mankind in general, which did not fall within the province of the philologians. In the matter of Greek art his mission was clearer still. He brought to his task a trained and delicate taste, a breadth and sureness of information, the tokens of which are manifest in these lectures. If they had been finished, we should have gained in them the introduction and the sympathetic guidance of an artist, whereas now we have to depend rather on the manuals of archæologists.

In his introductory sketch of Greek sculpture, Mr. Pater warns us against that cold isolation in which we now view all remains of Greek sculpture—isolation from the concomitant arts, from the architectural group to which, with careful estimate of distance and point of observation, the frieze belonged; isolation, also, from the clear Greek skies and the poetical Greek life. He reminds us that Greek sculpture was far from being exclusively intellectualized or idealistic. "The black and gray world of extant antique that remains to us ranged within the cold walls of our galleries, needs to be translated back into ivory and gold," and to be replaced in its rich and tasteful *milieu* of minor precious works, intaglios, coins, and vases. The Greeks were not in the least aware of Hegel's canon that "sculpture aims at the pure abstract form, and therefore abandons color and painting." On the contrary, they were prone to a sort of "realism," as we call it; they were frankly fond of warmth and color. And so, in spite of Hegel, they were actually capable of tinting the hair and faces of their statues, of coloring their eyes to imitate life, and of adding metal bridles to the horses of the Parthenon frieze. All this we are liable to forget in the galleries; indeed,

we have so few hints of it in the museums that the very statement of the practice still shocks our modern sensibilities.

Mr. Pater had always a horror of pedantry, but his graceful style covers a body of ample and solid learning which dissembles itself as much as possible. A single sentence or a single line sums up *en passant* the gist of some recent elaborate and technical discussion. In writing about the "Harpy Tomb," for example, he corrects in a single line the common notion that the winged birds with human faces are harpies, and prefers to call them sirens. An archæologist might tell us as much; but few archæologists could go on, as Mr. Pater does, to illustrate the symbolism of the little figures, or souls, carried in the sirens' arms, by referring to mediæval reliefs and colored windows in which the soul of Lazarus or of the Virgin Mary is similarly represented. In such matters he shows the precision of the scholar without pedantry, the taste of the artist without technicality.

Another special quality of his criticism is that he sees his subject whole, not from this or that side of the specialist. When he discourses of the Discobolus and the Diadumenus, he cannot forget the public and family life which they proceeded from and illustrated; he cannot forget Pindar's verses, which, in his own century, conferred on the young victors the splendor and immortality which in the next century were sought from the sculptor rather than the poet. The votive statues which were so multiplied in that age of devotion to athleticism, he calls most happily "a countless series of popular illustrations of Pindar's odes." And certainly the gymnastic that was crowned by nothing more vulgar than an Olympian ode or a statue of the Discobolus, must have been a step towards Plato's μουσική—towards the cultivation of a "fair proportion between body and soul." How far this "beau ideal of athletic motion or athletic repose" falls short of the whole conception of Plato's music, Mr. Pater defines with subtle discrimination in a passage that is not without its lesson just now:

> "When he came to his main business with the quoit-player, the wrestler, the runner, Myron did not for a moment forget that they too were animals, young animals, delighting in natural motion, in free course through the yielding air, over uninterrupted space. . . . It is of the essence of the athletic prizeman, involved in the very ideal of the quoit-player, the cricketer, not to give expression to mind in antagonism to, or invasion of, the body, whose healthful balance of functions it may so easily perturb—to disavow that insidious enemy of the fairness of the bodily soul as such."

In reading these last words of an unfinished message we cannot help regretting that the delicate vibrations of such sentences are to be heard no more, that they are to die away with the pathos and beauty of a passing-bell. There are people who detest Mr. Pater's style and who "canna thole him," because his art at times passes over into artifice and preciosity. Yet in an age when all the world is making haste to manufacture "copy," and to sell it at fetching prices, one may pardon the foibles that spring from painstaking. It is true that Mr. Pater liked to play upon his instrument and to draw from it melodies more varied and harmonious than those popular barrel-organ tunes which instructors in rhetoric now grind out so assiduously in company with their pupils. His paragraphs recall the warm, low colors of tapestry, its elaborate patterns wrought with many careful stitches. If at times they give the effect of something overwrought and superfine, we cannot at any rate complain that the stuff is not worth the embroidery. Not to mention his Plato and those essays on the Renaissance which years ago left their mark on æsthetic criticism, and captivated such stylists as Robert Louis Stevenson, the 'Marius' was in some respects a unique conception and achievement. We may call it a pagan 'Pilgrim's Progress'—a true history of the wandering of a human soul, none the less veracious because it was in part an autobiography, the story of a modern spirit moving in an ancient world. The experience it recorded with such delicacy of introspection and observation appealed, from its character and its setting, only to the few; but it was none the less genuine and important as a human document. The setting itself was equally unique in its combination of vivid creative imagination with entirely adequate and scientific learning. Such pictures as the visit of Marius to the temple of Æsculapius, or the sketch of the Dorian training at Laconia, show all the truer and more brilliant when contrasted with the vagueness or pedantry of the ordinary classical novel. Compared with these magic images from Faust's mirror, the Uardas, Ione, and Glaucuses move like the marionettes of a puppet-show. In all this careful work, in the cultivation of these rare gifts of thought and expression, Mr. Pater's weakness as well as his strength lay in a lifelong search for perfection. The search for perfection, in spite of the certainty that it is not to be attained in this world, was the aim of his labors—or, as he himself has said in his own manner, "the maintenance of a kind of candid discontent in the face of the highest achievement."

WALKER'S MAKING OF THE NATION.

The Making of the Nation, 1783-1817. By Francis A. Walker. Scribners. 1895.

THIS book follows works by Prof. Fisher and Prof. Sloane, in a series of four, which is to be completed in one by Prof. Burgess on the sixty years following 1817. From President Walker's position and known ability something valuable was to be expected; yet his pronounced views on the currency question excited a tremor on first opening his pages. It is eminently satisfactory to be able to say that no such visions intervene to injure the tone of this book, in every way worthy of a scholar, a teacher, and a publicist.

Of late more space has been given by historians to the first generation after the adoption of the Constitution, which their precursors had neglected. This manual, which by its size deprecates comparison with the histories of Adams and McMaster, yields to no book yet published for suggestiveness and penetration. The first chapter handles with fresh touches the old themes of the weakness of the Confederation; the load of National and State debt; the striking inferiority of the Congressional delegates at the close of the war to those at its commencement, and the distrust everywhere existing in the minds of the less prosperous part of the population towards the wealthier citizens. President Walker handles Shays's rebellion with a tenderness not surprising in a child of the Connecticut Valley, brought up in the traditions of the old rural Democracy of Massachusetts, that never loved the Boston Federalists and Whigs. His account of the Constitutional Convention is good; but in remarking on Washington's services as chairman, he might have mentioned Nathaniel Gorham, regularly called to the chair when the convention was in committee, the father of western New York, and altogether a more important figure in the country then than our histories generally indicate. Touching the proposition that representation in the Senate should be based on wealth, he asks his reader to "try to imagine any one daring to make such a proposition now." There is no need of the proposition; wealth now sits in the Senate directly, and not by representation.

In discussing the true theory of the States and the Union, Gen. Walker speaks of the extreme views of Jay and Patrick Henry as each worthy of lawyers, while an intermediate view, expressed in the words of Gerry, that "we were neither one nation nor different nations," appears to him more statesmanlike. This idea, that Chief Justice Jay, in Chisholm vs. Georgia, took the national view with too much of the lawyer's temper, is curiously inconsistent with an opinion expressed later on, that Jay was hardly enough of a lawyer for the great place of Chief Justice. It is, however, much easier to call that very great man either too much or not enough of a lawyer, than to refute the argument which President Walker quotes, that the colonies did not form State governments till they had asked and received the advice of the Continental Congress, and that the Independence of the United States was declared when only three had State governments at all. But President Walker decides that there was no real nation made in either 1776, 1783, or 1789; that the making went on for a generation longer, the new Western States being integral factors, and that the nation woke up to find itself really made at Monroe's inauguration in 1817. The formation of the new Constitution, and the tacit abolition of the Confederation, he thinks quite revolutionary, not legitimately growing out of any previous organism; and he is greatly troubled, as many others have been, at what might, could, would, or should have happened if North Carolina and Rhode Island had not ratified. Of course, it is for divine Providence alone to say why Rhode Island has been permitted, ever since 1640, to do things no other community ever did before or ever will want to do again; it is merely her destined way of falling into line, and the only thing is to be patient with her and not worry. Then follows a recapitulation, in a sort of *oratio obliqua*, of the Constitution itself; this seems unnecessary. It is useful in any history to print the Constitution word for word in an appendix, but the present plan too vividly recalls Justice Story's explanations—*i. e.*, literal restatements of the articles, much like the explanations of mathematical tutors in Harvard's elder day.

The ever-thrilling story of the adoption of the Constitution is well retold; and a very interesting fact, generally overlooked, is mentioned, that the old Tories, as a whole, favored the new scheme. It is not brought out clearly that Virginia ratified supposing herself to be the ninth and not the tenth State, and that Hamilton, to whom President Walker is hardly as just as he tries to be, shut his eyes to very tempting prospects, if he had been willing to be a pure New Yorker, and take his State, as he might, out of the Union. Those who declare that the vote of New York is necessary to elect a President should be reminded that at the first Presidential election she cast no electoral votes at all.

The author's tribute to Washington is dignified and just. He brings out the universal admiration he excited among his European contemporaries, and profoundly adds, "It is not American partiality which exalts the name of

Washington." In a brief review of the population and resources of the country in 1789, he indicates in a striking manner that nothing has contributed so much to the development of America as the inborn inventive genius, quoting from an English writer, "The American invents as the Greek carved, as the Venetian painted, as the modern Italian sings." If this is not a wholly new observation, it is here drawn out and illustrated by the President of a great school of mechanics as he has the duty and right to do. In his spirited account of Washington's administration, we are told that the wrath of the ultra-republicans blazed forth at the idea of the President's likeness on the coin, and insisted on an emblematic head of Liberty. Washington's difficulty in securing an efficient Cabinet is well told. That the Cabinet officers obviously considered themselves as occupying an independent position before Congress and the country is clearly made out; and indeed it was not till the removal of the deposits under Jackson that the theory of their absolute subordination to the President was established. President Walker expresses grave doubts if their admission to the floor of Congress would prove as effective a measure as its friends believe. Endeavoring to do justice to the genius of Hamilton, he still indicates a deep distrust of his political probity; but he takes more than one opportunity to speak in strong and deserved eulogy of the high character and priceless service of John Adams, a man who will stand higher in the estimation of his countrymen in exact proportion to the study that is given to his life.

The admission of new States, beginning with Vermont, leads the author into some excellent remarks on our Western sisters; the great help they have lent in the consolidation, or, as he will have it, the making of the nation, accompanied at the same time by many difficult and trying qualities, especially their financial unsoundness, which he regards as merely incident to a crude state of society, and sure to be outgrown. His account of the break-up of the Federalists and establishment of Jeffersonian Democracy is good and temperate; and his review of Jefferson's administration shows only too clearly what Mr Henry Adams's history had made plain before—that President Jefferson's patriotism and probity can undoubtedly be vindicated, but only at the expense of his good sense and judgment. It is truly painful to see many of our Southern members of Congress at this day thinking they offer conclusive proof of the soundness of any views when they find some warrant for them in the writings of Jefferson.

The narrative of the Louisiana Purchase and the constitutional questions it raised, and of the commercial and diplomatic quarrels with England and France, is extremely well done. When the war of 1812 is reached, though we have a correct summary, there is no attempt at any picturesqueness of campaign narratives. This is well. The country has been deluged, and in very late years especially, with pictures of martial strife on land and sea, and these have aided in fanning the rising flame of Jingoism and the Old World notion, worthy of Prussian octogenarians, utterly unworthy of Americans in middle life, that war is a good thing. It is obvious that President Walker has the honorable ambition to be the historian of peace, and he deserves that unstained crown. He is not afraid to vindicate the unselfish patriotism of the Hartford Conveners, while severely criticising some of their proposals and even the existence of the Convention; and he discusses with impartial but lively analysis the treaty of 1814 and the tariff act of 1816.

As is natural in one of President Walker's former occupation, he has much to say of the early censuses of the country, and the significance of the statistics then ascertained; and his book is provided with useful tables, maps, bibliography, and index. Without agreeing with all of his views, and perhaps with those he most cherishes, we cannot hesitate to commend this book as marked by a pure and lively style, a sound but chastened patriotism, and a recognition at once scholarly and practical of that transcendent idea, the "commonwealth of nations."

PREHISTORIC MAN IN NORTH AMERICA.

Vorgeschichte Nordamerikas im Gebiet der Vereinigten Staaten. Von Dr. Emil Schmidt in Leipzig. Braunschweig: Fr. Vieweg & Sohn. 1894. 8vo, pp. 216. Map and illustrations.

THE earliest attempts to estimate the period of the advent of man in America were made by Louis Agassiz from Lake Monroe in Florida, and by the physician Bennett Dowler from the delta of the Mississippi. The course of the Mississippi, however, is too irregular to permit observations made at one point of its delta to prove much for any other portion. As for the fragment of a human pelvis discovered in the clay-beds near Natchez, Miss., these strata of loess were caused by rain-floods, winds, and other atmospheric agencies, and hence can no longer be considered as sedimentary deposits. Dr. C. C. Abbott's investigations of the Trenton gravels are conceded by Dr. Schmidt (p. 27) to put beyond reasonable doubt the existence of diluvial man on the middle Delaware River; but his description of the deposits in which man's handiwork was found is too vague to identify with accuracy the special quaternary formation to which they belong. Gass's elephant pipes and other discoveries Dr. Schmidt refuses to take seriously. The Carson footprints were for a while the subject of fanciful speculation, but are now, in consequence of Prof. Marsh's argumentation, believed to be the tracks of a gigantic sloth. The distance of the two rows of foot prints from each other, or width of track, amounts to eighteen or nineteen inches, precluding the idea that man was in any way concerned in making them, though it would fit the elephant's gait as well as the sloth's. The discovery of the celebrated Calaveras skull in 1866, near Altarville, California, was attended with great doubts as to the remote age claimed for it. This relic was found in volcanic tufa 130 feet below the surface, and hence was certainly not of recent origin. The voluminous report which Prof. Whitney, then director of the State Geological Survey, made on this subject contains all the necessary data as to provenance, nature, and age. The skull bore a hard and solid incrustation of the rock material composing the stratum in which it was found—viz., calcareous tufa, rolling lava-stones, and ferruginous earth, together with fragments of human bones Schmidt is emphatic in asserting the excessive old age of this remarkable find, though he makes no special mention of Whitney's report.

Copper mining in its prehistoric bearing is treated with care and described with minute details by our author, who has visited in person the greatest copper-bearing region in the world, the shores and environs of Lake Superior. It may be said that copper occupies in America the place of bronze in Europe, for it is found in almost every part of the western continent, with more frequency as Lake Superior is approached. Bronze articles are found only in Mexico, Central America, and northern South America. The process of making copper tools properly belongs to the American stone period, for in their manufacture they differ in no wise from stone implements, both having been obtained by hammering, since copper tools are made almost entirely of pure and unmixed metal. Hence a copper period does not properly exist in America; smelting and casting of metals was unknown, nor can certain kinds of relief lines observed on copper implements be explained as junctures of the casting-mould. No American tribe was familiar with the process of soldering, although silver, the ubiquitous metal, would have furnished an excellent means for this process. The opinion of Farquharson, that all American copper implements were intended for ornament only, is controverted by Dr. Schmidt. Collectors and museum curators find it difficult to classify all American copper objects, and they can be named only analogically as chisels, buttons, stars, etc.

Of all the archæological remains on this continent none has excited more profoundly the curiosity of the educated classes than the mounds which exist in all possible forms, but which in no instance include stone walls. A large number of them served as defences against enemies and bear a strong resemblance to the settlements of the historic and modern Indians, which were either palisaded or surrounded with earthworks. In the Iroquois country there are as many annular forts as squares. Ohio is most thickly dotted with mounds and forts, as may be seen on Prof. Cyrus Thomas's map. Thomas makes out eight or nine districts east of the Rocky Mountains which are clearly distinct from each other in their mounds and graves, as the district of the Cherokees, the Shawnees, etc., but this division has been questioned. Flat-topped conical mounds are certainly characteristic of the southern belt of mounds. Buildings and fortifications stood upon their top, and west of the Mississippi they are found north as far as Wisconsin. Effigy mounds are found only in southern Wisconsin, in northern Illinois, in a corner of Iowa, amid plenty of other mounds. Their limit coincides almost exactly with that of the territory formerly held by the Winnebago Indians.

As a general result of mound researches, Dr. Schmidt holds that there never was a *special* race or people of mound-builders; that the mounds were thrown up by different sedentary Indian tribes of the same lineage as the Indians now living; that the plains along the Ohio and Mississippi Rivers were thickly settled by a population living by agriculture, and acquainted with the arts of pottery, weaving, and rough sculpturing of stones. The garden-beds of Wisconsin and Michigan prove an industrious culture of maize and other vegetables, but no monuments of stone architecture can be traced. The extent of the mound-covered region is large, though the Atlantic coast and the higher slopes of the Rocky Mountains contain almost none of these primitive memorials, many of which were simply burial-mounds. The growth of trees may serve in estimating the age of mounds, accumulations near mining-pits, sepulchral tumuli, etc., but is by no means a safe guide. Trees may have been enclosed within mound walls and be much older than these; and again we cannot absolutely depend on the number of rings.

In sketching the migrations and warfare of the Eastern nations, Dr. Schmidt largely upholds the views of Albert Gallatin and Horatio Hale, who tried to discover how much of real history there is in their legends. The Cherokees are evidently a branch of the Huron-Iroquois stock in race and language; they are said to have come from the lower St. Lawrence River, and, after having crossed at Sault Sainte Marie, to have gradually passed into their later seats in the Alleghany Mountains, while constantly fighting the enemies who were attacking them. It is almost certain that their ancestors were the builders of the numerous groups of mounds in Ohio. A deep-seated enmity existed between them and the cognate Iroquois of New York State, which lasted down to the end of the eighteenth century. They are believed to be identical with the legendary Talega or Talligewi, whose contests form a part of the curious, half-rhythmical Delaware record called 'Walam Olum.' Schmidt thinks their name is another form of Tsa'lagi ("Cherokee"), but it is more probably an adjectival form of the Delaware adverb talli, *over yonder*, which would permit us to interpret Talligewi as *those on the other side* of some large river or of the Alleghany range. In regard to the filiation of languages in these tribes, Schmidt adopts in every particular what Hale says, that Huron is the most archaic of the group, and, when the Iroquois was differentiated, the Mohawk and the Tuscarora retained the oldest forms. It is probably more accurate to say that, of the eastern group, Mohawk, Oneida, Cayuga, and Tuscarora are archaic in their phonetics, and that the "most changed" sounds are found in Onondaga and Seneca. From the Mohawks, as the "oldest confederates around the Iroquois council-fire," the other tribes emanated or were derived in the order of their settlement, from east to west, south of Lake Ontario. But their earlier seats must have been north of Lakes Erie and Ontario, and the Tuscaroras of North Carolina are reported to have separated from them when staying on the Oswego River.

"The Algonkin tribes originated south of Hudson's Bay, and from there spread out in various directions. The tribes speaking the more primitive languages phonetically live north of the Lakes and the St. Lawrence River, the Crees standing at the head of them. Of those that have gone south of that line, the Shawnees have retained more archaisms than the Illinois and Delaware Indians."

Suppositions of this kind are not improbable, but they do not account for the position of the New England dialects, nor do they explain the wanderings of the Blackfeet, Cheyennes, and Arapahoes to the Far West, for these tribes speak Algonkin languages also.

The Tutelo people were rediscovered by Hale in 1870 in the Canadian Iroquois reservation of Brantford. He was surprised to find that their sparse remnants were speaking a Siouan and not an Iroquois language. This ethnographic discovery bore abundant fruits, for, though Dr. Schmidt does not mention the fact, the investigators of the Bureau of Ethnology have since followed the hint and discovered that the Saponi of North Carolina, the Catawbas of South Carolina, and the Biloxis of Louisiana are also offshoots of the same distant Siouan stock. This entirely reverses our former ideas as to the migrations of the Siouan nations, and proves that they originally dwelt, like the Iroquois, to the east, and not, as they do now, to the west of the Mississippi River. The Ohio valley may have been their ancient domain.

Many of the Chactaw-Maskoki tribes continue to believe in the legendary story that they migrated into their later domain from Mexico and the countries west of the Mississippi River. But other legends of theirs tell them that their ancestors emerged from mounds, caves, and earth-holes in Mississippi and Alabama, which quite contradicts the first-mentioned belief. We know that populations speaking Chactaw, Creek, and Hitchiti lived in these Gulf States in Hernando de Soto's time (1540), and certainly much earlier. No country west of the Mississippi River can be proved to have been their ancient home, through its geographic names, through history, or anything else. Schmidt is doubtful about any such migration (p. 174).

Dr. Schmidt's work closes with some judicious remarks on the architectural and other remains in the dry regions of the Southwest. The more curious of these are the houses, walls, "palaces," and other structures erected in almost inaccessible places in the cañons or on steep slopes. We congratulate our well-equipped author on escaping the natural pitfalls of one writing of a strange country which he has not extensively traversed.

Life of Adam Smith. By John Rae. Macmillan & Co. 1895.

It is now more than a hundred years since Adam Smith died, and more than a hundred years, too, since Dugald Stewart read his memoir of Smith's life before the Royal Society of Edinburgh, although it was not until 1810 that this memoir was published as a separate work. As Mr. Rae says, it has hitherto remained the fullest account extant of the life of the great economist, but during the interval since its publication there has been a gradual accumulation of letters and reminiscences by and concerning Smith, which, in view of the continued vitality of his influence, deserve preservation. Some unpublished letters and some additional particulars have also been disclosed by Mr. Rae, chiefly through inquiries at Glasgow and Edinburgh; but the total additions to our knowledge are, after all, not very extensive nor very important.

In point of fact, the personality of Smith is unavoidably overshadowed by his achievements. These achievements are the product of scholarship, of reason, and of common sense. Undoubtedly no one—except believers in protection, whom Smith hated with perfect hatred and denounced with positive violence—can read the 'Wealth of Nations' without receiving the impression that the author was a virtuous and amiable man. It is evident, also, that the author was a remarkably sensible and well-informed man. But, like his good friends Hume and Gibbon, Smith was too thoroughgoing a rationalist to be especially interesting. Economists have long cherished the story of his strong language toward Dr. Johnson when that worthy called him a liar; but Mr. Rae throws doubt upon the whole episode, and thus deprives his hero of his only redeeming weakness. So far as we know, Smith never lost his temper upon any other occasion, and never deviated in the slightest degree from the path of rectitude. His character was of the kind to make the task of the eulogist easy, and to enable the epitaph-writer to indulge in the rare luxury of combining truth and praise in the same inscription. Mr. Rae has discovered some faint intimation of a love affair in Smith's earlier years, but his mother seems to have absorbed whatever affection he had to give to the female sex. He devoted himself to her, and as she lived to be ninety, he was not absent from her side many years of his life. His benevolence was extreme, manifested openly when necessary, exercised secretly whenever practicable. His abilities were restrained by his modesty; and after writing one of the most influential books that have ever appeared, he died regretting that he had done so little.

The great achievement of Adam Smith we conceive to have been the preparation of a manual of the art of government. His services to the science of political economy are very great, but it is not upon their account that he is so famous. It is because he was the first to offer to the ministers of parliamentary government a practical system of action. Up to his time, it might almost be said, legislators were without guidance in their task. Statutes were passed in the most haphazard way, and their results were frequently very different from what was expected. But Smith put in the hands of those who were responsible for the course of government a talisman which was sufficient to keep them from serious blundering, if not to lead them to success. Thus his book became the corner-stone of parliamentary statesmanship, and we do not hesitate to say that if it had been accorded in the schools of our country the place which it deserved, we should have avoided many disastrous blunders in the past, and might escape some to which we are doomed in the future. In spite of all the attacks made upon the theory of government which Smith professed, it remains true that no other theory has been reduced to a practical system, and that deviations from his theory continue to result in the very mischiefs that he described.

Mr. Rae does not attempt to give any estimate of Smith's work. He confines himself to tracing his life from year to year with the aid of the rather scanty materials which are available, and he succeeds in making a readable but not a very interesting book. Smith himself, according to Boswell, used to say to his class at Glasgow that there was nothing too frivolous to be learned about a great man, and that, for his own part, he was always glad to know that Milton wore latchets to his shoes and not buckles. Following this maxim, Mr. Rae has very cleverly interspersed narrative with anecdote, and though he is obliged to confess that many of the stories about Smith are apocryphal, he is able to demonstrate the inherent probability of others. Upon the whole, we think that Mr. Rae has performed a difficult task with a good degree of success. He cannot be said to have reanimated his subject, and brought him before us as a living and speaking man. The outlines of the portrait are faint and the colors are dim. But students of economics and of the art of government will be glad to have all the relics of their great teacher collected and arranged with the respectful care shown by Mr. Rae. We must say, however, that we cannot but regard it as an unpardonable omission in a book of this kind that it should contain no portrait of its subject, especially as several are available.

Collected Papers on Some Controverted Questions of Geology. By Joseph Prestwich, D.C.L. (Oxon.), F.R.S., etc. Macmillan & Co. 1895. 8vo, pp. x, 279.

In the first stage of its development the science of geology passed through a period of controversy, during which the causes of the phenomena it is concerned with were debated with an acrimony and an ignorance of the

facts that may be compared to the disputations of the mediæval philosophers. Towards the latter part of the last century the futility of these debates became so evident that the students of the Earth abandoned that method of inquiry, and betook themselves to deciphering the records of the rocks. A hundred years of such labor has resulted in the accumulation of a very great store of well-recorded observations. Incidentally this body of knowledge has, from mere grouping of the details, thrown much light on the series of actions in and on this sphere; but all the while there has been springing up a series of problems which must be discussed in a broad way, and with the expectation that the best solution that can be attained will be supported not by distinct proof, but by the balance of probabilities. Prof. Prestwich has in this volume of collected and extended papers made a very interesting contribution to the debates which are for a while to occupy the attention of geologists. In the six essays thus brought together we find a very fair opening for the controversy over some of the questions which most immediately demand a general theoretical discussion. These are as follows: the uniformity of geological action; the date, duration, and conditions of the glacial period; the age and succession of human races; the cause of volcanic action; the constitution of the earth's crust, and the internal heat of the sphere.

In his first essay, concerning the Position of Geology, the author states his objection to the hypothesis that the rate of geological change has been anything like uniform in the successive ages of the earth. In this he is in accord with the greater number of his scientific associates. Some of them, however, would object to his statement of the matter, for the reason that he does not explicitly recognize the danger, so well shown in the ancient history of geology, which is incurred whenever we begin to imagine another order or rate of action than that which we now behold in the various realms of the earth. Although the world of to-day is perhaps not a perfectly fair sample of the ancient world, it is a better ground for our inquiries than any hypothetical sphere could possibly be. The safe middle way is to start with and hold fast to the presumption that what we see to be now going on in and upon the earth, is a fair sample of the work done in earlier times. When the proof is clear that in any ancient period the processes were other than those we behold, or the rate of action different, then, and not till then, and only to the strict limitations of the need, should we abandon the principle of uniformity which has led geology from a maze of speculation to the firm ground of science.

In his second chapter, on the Glacial Periods and the Antiquity of Man, our author protests against the hypothesis of Dr. Croll which seeks to explain by astronomical causes the climatic conditions that led to the extension of the ice-fields. The protest is general, and is limited to destructive criticism; there is no suggestion of another view and no sufficiently arrayed proof to show that the last glacial period was, as seemed upon evidence not adduced by the author, less ancient than Croll's view requires us to believe. A large part of this essay is taken up with an interesting, but incidental, inquiry as to the length of time it may have required for the continental glaciers to accomplish their extension and retreat. This does not touch on the main points which we need to know, namely, how long the ice-caps were maintained at or near their maximum development. The author repeatedly states his belief that the glacial period was a time of very extreme cold. This view seems distinctly against the probabilities of the case. To bring about another such ice time, we should have to provide for a great increase in the supply of snow; this would require a larger amount of evaporation, in regions near to the glaciated area; moreover, the gain in precipitation would, most likely, be accompanied by a certain augmentation of temperature, in the realm where the fall took place, through the conversion of latent into sensible heat, as the process of condensation went on. The question is very complicated; but whoever will consider the fact that the coldest areas of the world, those in which the soil is locked in frost to the depth of hundreds of feet, are quite without glaciers, will be driven to question the hypothesis that the last ice epoch was due to extreme frigidity.

In the chapter on the Flint Implements of the plateau district of Kent, the author deals with a very puzzling set of facts which have of late interested geologists and archæologists. In the English field, as in the Trenton district of New Jersey, chipped stones, in evident semblance of primitive art-work, plentifully occur in deposits which were probably deposited during the glacial age. It is not easy to account for the introduction of these chipped stones at a later time than that in which the beds themselves were laid down; it is even more difficult to suppose that they were conveyed to their present sites by the ice. Although some of the specimens figured by Dr. Prestwich are clearly the product of art, it is not unlikely that in this, as in other cases, the collections which have been made from glacial deposits are to a certain extent composed of stones naturally fractured. Those who have been close students of drift materials have generally had occasion to remark how the shearing action of glacial motion sometimes leads to a fracturing of pebbles, or even of considerable boulders, in a manner which suggests art-work. This action, for evident reasons, is particularly apt to occur in those varieties of stone which are especially suited for making implements. It is not improbable that the conditions above mentioned have led to some part of the obscurity in which these inquiries have become involved.

In the chapter on the Agency of Water in Volcanic Eruptions, the author sets himself against the modern view that the explosive actions are due to the effect of a superheated water contained in the liquid rock. He contends, with much ingenuity, for the hypothesis that the water which plays so important a part in most outbreaks is derived from the surface, and that it meets the ascending column of lava in the base of the cone. Unfortunately, he does not take into full account the geographical distribution of volcanic vents. Their uniform limitation to the sea-floor, or to the shore-lands neighboring thereto, is a most important fact. This distribution is explicable on the hypothesis that volcanic action is due to the tension of water-vapor brought about by the upward movement of the planes of equal earth-heat in water-bearing rocks. This movement normally occurs beneath the areas of sedimentation, and is apparently sufficient to give rise to the volcanic tensions.

In discussing the Thickness of the Earth's Crust, we do not find that the author has made a notable contribution to the question as to how we are to reconcile the dictum of the physicists concerning the essential rigidity of this sphere with the abundant evidence that the strata warp with the utmost freedom, and that the continents sway up and down in a manner which enforces the idea that the superficial part of the earth rests on a foundation that behaves as if it were molten. The truth is probably to be found in a better conception of the terms fluid and solid. A body may be as rigid as wrought iron, and yet, under sufficiently great stresses, be made to flow. It is not unlikely that the strains which operate in the so-called crust of the earth are great enough to bring about, in materials which are as rigid as our firmest rocks, all the movements required to account for their deformation.

The volume ends with a chapter on underground temperatures, which is an admirable contribution of a very detailed sort to the question as to the rate of increase of heat as we descend below the surface. The list of observations is twice as great as any that has heretofore been given, and the criticism of the data better directed than in the previous essays on the subject. Eliminating the untrustworthy observations, by far the greater part of the list, the author comes to the conclusion that the date of increase may be safely taken at about one degree Fahrenheit for each fifty feet of descent.

Dr. Prestwich's contribution will excellently well serve the purpose which has led to its publication; it will excite controversy in fields where debate is much needed and in which the matter is ready for the argument. The book unhappily lacks an index. There are sundry minor slips, as, for instance, where the name of Baron Sartorius von Waltershausen is twice cited as Wattershausen. According to tradition, this worthy geologist originally bore the name of Schneider; one stage upward was taken by Latinizing the plebeian cognomen; a second, by the addition of the baronial name. If quoted in brief, the name should be Sartorius.

Evolution and Effort, and their Relation to Religion and Politics. By Edmond Kelly, M.A., F.G.S. D. Appleton & Co. 1895.

Mr. Kelly's book is related to so many topics of current interest that, were its treatment of these topics less effective than it is, it would challenge wide attention. His range reminds us of Bishop Berkeley's famous treatise on tar-water, which, beginning with his wonderful specific, ended with an exposition of the Holy Trinity; but he inverts the Bishop's order, and, beginning far away in the mysteries of organic evolution, he ends with the concrete of New York municipal politics—a kind of tar which some have touched incautiously and therewith been defiled. He tells us in his preface that his book was practically completed before the reanimating results of the New York elections of 1893 (meaning 1894). Evidently the preface was completed before the exanimating results of those elections had declared themselves as they have now, when it appears that the rushing stream of our enthusiasm for reform has largely been diverted to turn the private mills that manufacture predetermined spoils.

The main purpose of Mr. Kelly's book is a good one, namely, to encourage us to believe that if we are the bosses' underlings, the fault is not in our stars, but in ourselves—not in the stress of evolution, but in our lack of effort in opposing this. And so it happens that he ranges himself with Huxley in his courageous battle with the universe, as planned in his Romanes Lecture, and against the determinism of Spencer, the social selection of Weismann and Kidd. All this is instructive as showing that what is one man's meat is another's poison. A great many people have found Huxley's doc-

trine of man against the universe exceedingly depressing, but here is one whom it exhilarates, and what he writes of the ideal man is an exact picture of himself: "He appears as a combatant, instinct with vigor and life, defiantly pitting himself against the very forces of Nature to which Spencer tends to regard him as hopelessly subjected." He appears to us to overrate the practical effects resulting from determinism or the opposite conclusion. Mr. Spencer is certainly as little inclined to *laissez faire* as Prof. Huxley in his general attitude towards social wrongs and miseries, while they both uphold the Manchester political economy, and Mr. Kelly, who is on the right side of every practical question, is heartily with them. John Stuart Mill was a very earnest necessarian; but he never bated a jot on this account from his hostility to any concrete evil of his time.

As Mr. Kelly proceeds with his discussion, it becomes more practical. Under the head of "Church and State," he has some very good observations on the disposition of clergymen to "keep out of politics," but we are inclined to think that when he speaks of those with whom "abstention from politics has grown to be a sort of virtue," he is thinking overmuch of a particular church, and more of its past history than of its present status. In view of the courage which political outspokenness requires in a clergyman under the voluntary system, the wonder is, perhaps, that so many stoutly refuse to hold their peace. Mr. Kelly's contention is that, while partisan politics are so divisive that few clergymen can be expected to take part in them, there is a wide field of political interests which can be cultivated by clergymen with the happiest anticipations. This is, indeed, the final outcome of his book, and if the particular forms of organization which he suggests do not commend themselves to his readers, there is much in the spirit of his argument that is deserving of the carefullest consideration.

"Municipal Misgovernment" is the title of a chapter that contains much admirable matter. So far as New York is concerned, the advocacy of separate municipal elections is, of course, a *post-eventum* prophecy, but this point is only one of many. Coming to "The Problem of Pauperism," Mr. Kelly has a good word for indeterminate penal sentences and for the Elmira system, and elaborates a scheme of willing and unwilling pauper colonies which is, perhaps, not too Utopian to be within the bounds of possibility. Such a scheme is manifestly socialistic; but in a chapter dealing with socialism Mr. Kelly manifests a temper very different from that of Bellamy's 'Looking Backward' and Morris's 'News from Nowhere.' He develops the policy of the Fabian Society at full length, and, less expansively, that of the People's party; and, if his comments are more sympathetic than are warranted by the one programme or the other, he is again upon the firmest ground when, with Sir Fitz James Stephen and Prof. D. G. Ritchie, he falls back on the political philosophy of Burke—that every case is to be taken on its own merits. If the socialistic programme is good, and the means proposed for its realization are adequate, and its contingent evils will not outweigh its benefits, the sooner it is realized the better.

A Short Comparative Grammar of English and German, as traced back to their common origin and contrasted with the classical languages. By Victor Henry, Deputy-Professor of Comparative Philology in the University of Paris, etc. Translated by the author. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1894.

THE French edition of this work was published in November, 1893, and the preface to this English edition is dated May 1, 1894. That such a work was needed will be conceded by every scholar, and that it has been well done must be acknowledged by every one who has read it through carefully from beginning to end. The several parts treat successively of sounds, words, declension, and conjugation; and that the study of phonetics is made the basis of the whole is shown by the fact that the first topic occupies fully one-third of the volume, and the bulk of each other division. It is an application of the modern method of the study of comparative grammar to English and German, and, as the author says, "is intended to introduce the comparative method to students who already have some knowledge of both the English and German languages." While the work is ostensibly limited to "the comparative study of modern English and German," the author hopes "that for some students it may also serve as a primer of the earlier languages." Since, in our judgment, it is impossible to apply the comparative method intelligently to English and German without making use of the historical method also—without comparing the forms of Old English and Old High German—we find the author perfectly right in introducing these forms; in fact, the chief criticism that an English student would make of the work is that Old English forms have been sometimes omitted because they were lost in modern English, in cases where they would illustrate further the points discussed. It seems to us, however, a mistake to suppose that a student will gain from this text-book sufficient grammatical knowledge to enable him to translate, with a glossary, "such easy texts as may be found in an elementary chrestomathy of Middle English or Middle High German, of Old English or Old High German, or even of Low German or Gothic." These languages must be learned for themselves, and then the student will be better able to apply to them the comparative method so well delineated by Prof. Henry.

It would require more space than we can afford to criticise this grammar even cursorily from a philological point of view. The author defends in the preface his use of the term "metaphony," but we think it would have been better to use throughout the German term *umlaut*, which has been completely naturalized in English, or the English term "mutation," which Mr. Sweet and Prof. Skeat have been trying to naturalize for this process. So, too, *ablaut* seems better than "gradation" or "apophony." Another minor criticism is that where the terms "voiceless" and "voiced" have been deliberately used, it is not worth while to go back to "hard" and "soft"; the use of terms should be consistent. On p. 10 (1006) is a misprint for (1016); so, p. 34, is O. E. *lygen* for *lyge;* on p. 37, note, (Saxonic) and (Anglic) should exchange places; p. 87, O. E. *scyffan* stands for *scyppan*, better *scieppan*. On p. 174 the patronymic use of *-ing*, so common in the A.-S. Chronicle, is overlooked. P. 200, "Shake-speare" was parodied as "shake-scene" only by Greene in his well-known reference, hence "sometimes" is out of place. P. 268, "in them days" is scarcely "a trace of the old dative"; it is simply illiterate. P. 294, while the past participle *rode* was in use in the last century, it is now obsolete. P. 300, second note, *thresh* is not merely "a rural form," but is better English than *thrash*, which is now colloquial. Pp. 357-8, some O. E. forms, from which modern forms survive, are omitted, as O. E. *wiste*, Biblical *wist;* O. E. *witan*, legal formula *to wit;* O. E. *gewiss*, M. E. *iwis*, modern *I wis*, from mistaken analogy. P. 361, O. E. *āhte*, ought, is classed by grammarians (cf. Sievers) as "Type A," from its present *āh*, and so should not be entered as "unclassed"; O. E. pres. *ah* =owe, is omitted. P. 368, the modern distinction in the use of *shall* and *will* as auxiliaries is not noticed.

All told, we have found very little to suggest by way of correction, and can commend most heartily this excellent work to all *Fachgenossen*. The author himself says (pp. 375-6): "For practical purposes these scientific results may have but little value. . . . But the scientific mind, which likes to penetrate into the reason of things, will derive both profit and pleasure from being able to trace in the history and evolution of a language the reasons for its most minute and often apparently contradictory rules."

Catherine II. et la Révolution Française. Par Ch. de Larivière. 8vo, pp. xxxiii, 391. Paris: W. Le Soudier; New York: Brentano's. 1895.

THIS is the first of four volumes that are to appear successively on Catherine the Great, based upon her correspondence—a mass of letters in course of publication by the Imperial Russian Historical Society. The first volumes of this collection were issued a little more than twenty years ago, and the earliest letters of Catherine's were written on her accession to the throne in 1762, so that the wish she expressed to Grimm that her "pancartes" should not be made known to the world for at least a hundred years was exactly granted. That M. de Larivière is fully competent to deal with this material is vouched for by M. Alfred Rambaud (and there could be no better endorser), who assures the reader that "the book is based on the most complete and the most accurate information. No document of any importance, whether published in Russia or in France, has escaped the observation of the author; Russian collections almost inaccessible to the French public have been laid under contribution; and, finally, the author has sought in our own archives the solution of problems that no printed work could throw light upon."

"Fortunate the historian," exclaimed Voltaire, "who shall write a century hence the history of Catherine II.!" M. de Larivière does not present himself as that personage. His work is not a history of "Catherine *le Grand*," as she liked to be styled, but studies of her as the ruler of Russia, as a woman (or man) of letters, and in the other relations of her life where again she was both woman and man. The present volume treats of the attitude Catherine maintained during the great Revolutionary crisis. The friend of the Encyclopædists became the irreconcilable opponent of the Revolution. A "liberal" in 1767, she was in 1789 an extreme "réactionnaire." In one part of her life she was governed by opinions entirely different from those that possessed her afterwards, and it has been our author's object to show the stages of this curious evolution. He especially notes the judgments she expressed regarding the French Revolution, and points out the manner in which she combated it, even when her action is the most obscure. The Czarina could not be blind to the *universal* character of the Revolution,

to the fact that, as M. Albert Sorel has said, it menaced all established powers, and invited all nations to revolt and freedom. During the revolutionary period, selfishness and rapacity were dominant in Europe, and nowhere more so than in the brain of that sovereign who was most successful in exciting discord among her neighbors and benefiting herself by their jealousies. Towards the end of her life she said one day to Choiseul-Gouffier: "I have sailed my little boat as well as I could." She sailed it extremely well, and it was not so small a boat either, for more than once it carried the destinies of Europe. But never was there a more striking instance of the power of the winds of Fate, for, to quote M. Sorel again, "if no one contributed more than Catherine to form the coalition against republican France, no one contributed more to dissolve it, and thus, involuntarily and unwittingly, she rendered an immense service to that Revolution she execrated and whose ruin she longed for."

The acts of the Empress define her character, but in her letters may be found the "why" of her acts. The matters that occupied her thoughts are constantly noted in her correspondence, carefully and often sincerely, and with a quality of imagination in the expression flowing directly from that vital force that made her conquests of every kind so numerous, and which, guided by a rare strength of will and still rarer personal energy, enabled her to give unrivalled brilliancy to the position she occupied, and to raise the Slav power to undreamed-of heights.

Poets on Poets. By Mrs. Richard Strachey. London: Kegan Paul; New York: Scribner.

"An English poet," wrote Butler, with his usual wit—

> "An English poet should be tried by his peers,
> And not by pedants and philosophers."

The verdicts of juries thus constituted are what Mrs. Richard Strachey has undertaken to record in her 'Poets on Poets.' She has done her work well. It is impossible to open her charming volume at random without hitting upon verses that one will care to read. Most of the best-known passages in which English poets judge their fellows are included, and not a few besides that only students are familiar with. There are all varieties of expression—elegy, compliment, flattery, calm appreciation, rhapsody, satire; but the prevailing tone is commendatory. Indeed, if the book has a fault, it is perhaps this of protesting too much. Not that the poets have always been good-natured; it is rather Mrs. Strachey's good nature that has produced this harmony. She intentionally omits personal satire—"whatever is concerned with the man alone and not the writer." This is probably a wise principle of exclusion, but we doubt if it is always wisely applied. Pope's portrait of Atticus, for instance, is excluded on this ground, though surely it concerns itself with the writer as well as with the man. There is more reason for leaving out Churchill's sketch of Dr. Johnson as Pomposo. We sadly miss Dryden's Elegy on Oldham. No doubt this was omitted as being praise of the man rather than criticism of his poetry, but the critical significance of the piece is clear enough. Drayton's "Epistle to Henry Reynolds" is, we are glad to see, printed without abridgment. Many persons who are not ill-read will owe to Mrs. Strachey their first acquaintance with this delightful poem.

BOOKS OF THE WEEK.

Allen, Ethan. Washington; or the Revolution. A Drama. F. T. Neely.
Bruce, M. W. Alaska, its History and Resources. Seattle: Lowman & Hanford.
Clodd, Edward. The Story of "Primitive" Man. Appletons. 40 cents.
D'Arcy, Ella. Monochromes. London: John Lane; Boston: Roberts Bros. $1.
Harland, Henry. Gray Roses. London: John Lane; Boston: Roberts Bros. $1.
MacColl, Rev. Malcolm. England's Responsibility towards Armenia. Longmans, Green & Co. 75 cents.
Marshall, Luther. Thomas Boobig. Boston: Lee & Shepard. $1.50.
Needell, Mrs. J. H. The Vengeance of James Vansittart. Appletons.
Oliphant, Mrs. Two Strangers. R. F. Fenno & Co.
Phillpotts, Eden. A Deal with the Devil. F. Warne & Co. $1.

JUST PUBLISHED:

JOHNSON'S RASSELAS.

Edited by Oliver Farrar Emerson, Assistant Professor in Cornell. (*English Readings.*) Lvi+179 pp. 16mo, cloth, 70c. *net;* boards, 40c. *net.*

The text is based on that of the first edition, from which there have been considerable, though unauthorized, changes in subsequent editions. The Introduction treats of the circumstances of the writing of 'Rasselas,' of the sources of the story of the Happy Valley, of the character and interpretation of the work, and of Johnson's style. The notes explain allusions and trace sources of Johnson's materials.

BOSWELL'S LIFE OF JOHNSON.

Relieved from passages of obsolete interest. $1.50. *This is the edition used at Yale.*

JOHNSON'S CHIEF LIVES OF THE POETS

(Milton, Dryden, Swift, Addison, Pope, and Gray). Edited by Matthew Arnold. $1.25 *net.*

MACAULAY AND CARLYLE: ESSAYS ON SAMUEL JOHNSON.

Edited by Wm. Strunk, Instructor in Cornell. (*English Readings.*) Bds., 40c. *net.*

Postage 10% additional on net books.

HENRY HOLT & CO., N. Y.

Yale Mixture.

A GENTLEMAN'S SMOKE.

You won't know the luxury of Pipe-Smoking until you use Yale Mixture.

A two-oz. trial package, postpaid, for 25 cents.

OF

St. Mary Magdalen College,

OXFORD,

FROM THE FOUNDATION OF THE COLLEGE.

New Series.

Vol. I. Fellows, to the Year 1520.

By William Dunn Macray, M.A., F.S.A., *Fellow Rector of Ducklington*, Oxon.

Demy 8vo, cloth, $2.25 net.

*** This volume is the first of a series in continuation of that which was edited by the Rev J. R. Bloxam, D.D., and which was published in the years 1853-1881, in seven volumes Dr Bloxam's work comprises the record of the Choristers, Clerks, Chaplains, Organists, Schoolmasters and Ushers, and Demies. The new series, based upon his collection, will comprise (in probably four volumes) the record of Fellows and Presidents, to be followed, it is hoped, hereafter, by a continuation of the earlier volumes and a register of the non-foundation members.

Extracts from the College Registers' and Bursars' accounts are prefixed, an Index of the names of the Fellows, and a General Index is added.

MACMILLAN & CO., 66 Fifth Ave., N.Y.

BIMETALISM.

By Henry Dunning MacLeod, M.A., of Trinity College, Cambridge, and the Inner Temple.

Second Edition. 8vo, $1.75.

Persons interested in the silver question may read Mr. MacLeod's work with profit. It contains a fair statement of the issues, and discusses them with great intelligence and clearness.

Sold by all Booksellers. Sent, postpaid, by

LONGMANS, GREEN, & CO.,

PUBLISHERS,

69 Cornhill, Boston.

CRANE (Stephen). The Black Riders, and Other Lines.

Five hundred copies, small octavo, printed throughout in capitals, $1.00. With fifty additional copies printed in green ink on Japan paper, $3.00.

The weird black orchid springing on the cover of the booklet in which "The Black Riders" are presented to the world is not more singular or more fantastic than the symbolism which runs through it.—*Milwaukee Sentinel.*

If this be poetry, heaven defend us from the poets! The book is presented in a way that suggests the intensely obnoxious Beardsley style.—*Newark Daily Advertiser.*

Just Published.

SAVAGE (Philip Henry). First Poems and Fragments. Five hundred copies, octavo, $1.25. Fifty copies on handmade paper, $3.00.

CRAIGIE (Christopher). An Old Man's Romance. A Novel. Octavo, cloth, $1.25.

Copeland and Day.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by Park & Tilford, New York, and all wine merchants. Send for price list.

The Nation.

NEW YORK, THURSDAY, JUNE 20, 1895.

The Week.

It is an old commercial maxim that the condition of the iron industry is the most faithful index to general trade conditions. That industry is always, therefore, worth especial study. It will be recalled that in April, when many staple products were advancing rapidly in value, some doubts were suggested as to the permanency of the business revival, and the slowness of iron and steel to share in the recovery was used as an argument. These great staples certainly did fail in that month to reflect in full the movement of better promise. There was some advance in prices, but this was due to a partly speculative move by which the largest Pennsylvania producer, having a full supply of finished material on hand, marked up prices and wages simultaneously in order to force a profitable margin for the stored-up iron. It was, however, said by careful observers at the time that, whether the move was speculative or not, its success in "pegging" prices proved that normal conditions justified it. And this judgment is verified by the event. A really violent advance in prices began with the second week in May. Since then the further recovery has been so rapid that Bessemer pig-iron a week ago sold $2.20 a ton above the January minimum, an advance of 22½ per cent. Steel billets, the other index of the trade, advanced meantime, as compared with March quotations, $3.25, or 22 per cent.

That this advance is no longer a matter of simple speculation, and, least of all, a result of "cornering," is proved by the record of stocks of manufactured iron. During the month of May, when prices were rising with greatest rapidity, the stock of manufactured iron on hand at the leading furnaces actually decreased 95,597 tons, or more than 12 per cent. The *Iron Age* remarks further that this legitimate demand has hardly as yet been swelled at all by the greatest customers of the iron trade—the railways. That a really heavy inquiry from this source is near at hand, is evident to all observers of the transportation industry. Railway gross earnings are showing an increase of from 6 to 8 per cent. over 1894, and if the returns of companies in the depleted "corn belt" are excluded from the reckoning, the percentage gain becomes much larger. Weekly returns show this improvement to be continuous, and when the increase has reached the point of safety, it may be taken as certain that very large expenditures will be made for material to improve the physical condition of the roads. The Pennsylvania system has already set the example; others will soon follow; and the result will appear in all branches of industrial production. This forecast justifies the comment of the *Iron Age* that "the gain in value [of iron] thus far has merely been the gradual opening of the bow when released from tension. Wages have improved, together with prices, but until we are again back in an even line with conditions as they existed at the time of the panic, we are surely justified in both hoping for and expecting a further enhancement of values."

The Memphis monetary convention No. 2 was called for the express purpose of counteracting Memphis convention No. 1. How has it gone to work to do it? The earlier convention set out to demonstrate the fact that the solid business men of the South were for honest money. It was made up of delegates from chambers of commerce and boards of trade, bankers, merchants, and manufacturers. They maintained, by speeches and resolutions, that the Harrises, the Blands, the Turpies, the Stewarts, and the general run of Populist hangers-on did not fairly represent the business sense of even their own section. In this lay the value and encouragement of the gathering, and its effect was so marked both in this country and in Europe that the silver-men became alarmed and set about getting up a counter-demonstration. But all they have done is to prove the exact truth of what the business men of the South had affirmed. The charge was that only a collection of old Bourbon Senators and political men-of-all-work and Populist adventurers could be found to advocate free coinage of silver, and to refute it there is devised a grand round-up of these very political nondescripts. The country will not be very much impressed by the great discovery that Harris, and Bryan, and Sibley, and their tools and victims stand just where they did before. Yet that is all that their convention really proves.

Politically, the Memphis convention ran away from its own issue. It would not declare for a separate silver party. Torn by the struggle between devotion to silver and devotion to the offices, it gave in to the latter. Some of the bolder spirits were for cutting loose from the old parties and nominating each other for the Presidency; but so many cries of "God forbid!" arose from the office-holders and would-be office-holders present that the resolutions had to dodge the whole thing. This practically serves notice on the managers of either party that the tremendous silver bolt will never "materialize." The Memphis conveners are silver's own true lovers, but they are intenser lovers of party regularity and consequent eligibility to office. So if the national platforms of their respective parties do not meet their views, their views can be altered to meet the platforms. As it is flatly inconceivable that either party will be found next June deliberately splitting itself in two as the best way to carry the Presidential election, the failure of the Memphis convention to display the courage of its own lack of convictions is tantamount to a guarantee that there will be no Silver party pure and simple. Thus its total political effect is but to mark another stage in the ebbing of the silver madness. Some of the delegates themselves could not help betraying their consciousness that the fight was going against them. The gold-bugs, said one, might think the silver craze was about over, but they would find that they were very much mistaken. When men talk like that, the next thing is collapse and surrender.

The tide is now everywhere setting strongly against the free-coinage movement. The results of the Democratic primaries in Kentucky assure the defeat of Senator Blackburn in his efforts to commit the State convention to the "16 to 1" idea. As Kentucky was supposed to be hopelessly given over to the silverites six weeks ago, the change of sentiment thus demonstrated is most striking and significant. Ohio is another State where the Democrats have gone half crazy over silver, but are now recovering their senses. Young Thurman has been loudly boasting that Franklin County, which contains Columbus, would send to the approaching State convention a solid free-coinage delegation; but when the caucuses were held, the sound-money men carried everything before them, and the indications are now hopeful that a rational plank will be adopted. Another sign of the dwindling enthusiasm for silver is found in the failure of the Bimetallic League in Kansas to gather the expected crowds at the State convention in Topeka. Both Republicans and Democrats fight shy of the scheme, and the Bimetallic League appears likely soon to be only another name for the Populist party.

The revised returns of the Director of the Mint as to the world's gold production for 1894 bring the total up to $181,510,000. This is $11,000,000 greater than the estimates of the bureau published a few weeks ago, and $30,000,000 greater than the output of 1893. Dismal news this for the 16-to-1 silverites, some of whom are now asking what the gold-bugs will do if the production becomes excessive and the prices of commodities rise in consequence. Bless your hearts, the gold-bugs will

not demonetize gold, however plentiful it may become. They will stand and take it; they will grin and bear it. Director Preston's statistics show another fact quite as surprising, viz., that the world's production of silver for the same year, reckoned in ounces, is somewhat greater than that of the previous year, notwithstanding the decline in price. This is not remarkable when we consider that the construction of railroads and the improvements of machinery and processes of extraction are only now beginning in some of the most important silver-producing countries, especially Mexico and South America. Every new railway and steam-engine introduced for the first time into these countries makes some mines productive that could not be worked before.

Perhaps the most crushing part of the avalanche of fact that poor "Coin" has brought upon himself is the proof, from actual market reports, that the farmer has *not* been hurt by the fall in prices since 1873, whatever has caused that fall. Prof. Laughlin has shown that the farmers of the Northwest really get more goods now in exchange for their wheat and corn than they did in 1873. What he showed for that region has now been shown for Virginia in a most practical and telling little pamphlet, "Free Coinage and the Farmer," by Mr. E. C. Klipstein. The writer has had access to the books of a prominent country merchant of Virginia, covering the years 1867 to 1895, and showing the real exchangeable value of produce in goods, then and now. In 1867 the farmer could get for 50 bushels of wheat, 100 bushels of corn, 500 pounds of pork, and 100 cross-ties, a money price of $289.50; in 1895, he would get but $138. There is the free-coinage argument in a nutshell: the farmer robbed of half his crops by the gold monopoly. But look further, and see what the farmer could do with his money in 1867 and what he can do with it now. Mr. Klipstein gives a long list of prices of groceries, dry goods, hardware, tools, etc., of daily necessity to the farmer, and shows that an average consumption of these articles would have cost, under 1867 prices, $341.08. In 1895 the same things could be bought for $112.05. Thus the Virginia farmer's loss by falling prices is really a considerable gain. On the transaction referred to he would be $77 to the good—that is, to supply his needs in 1867 he would have had to add $51.58 to his produce, while now he could purchase the same things with his produce and have $25.95 to his credit.

Some of the English bimetallists appear to have taken fright at their own prophecies. The immense blessings which they have pictured as the sure result of bimetallism have had the effect of seriously alarming the conservative and property-owning classes. These know well enough that there is no hocus-pocus in any kind of currency contrivance to make all the poor rich, to enable debtors to settle with their creditors, and to make everybody live happy ever afterwards. So they have frankly said to Balfour and Courtney and the others: "We do not like your bimetallic millennium at all. Please prove to us that you are not proposing to make other people rich by making us poor." Mr. Courtney saw the awkwardness of this demand, and tried to reassure his alarmed friends by asserting, in a debate on bimetallism at the London Institution, that after the adoption of silver coinage "the common mass of mankind would pursue their customary life in happy, ignorant unconsciousness of any change." Then where would the millennium come in? What has become of the promise of double prices for the English farmer and double wages for all laborers? If they got those would they be so happily unconscious of any change? We fear that Mr. Courtney, in trying to reassure the creditor class, has simply succeeded in disgusting the debtor class. If bimetallism means no change, no scaling of debts, no automatic diffusion of prosperity and virtue, it will lose all its charms.

Considerable anger has been aroused in the celestial minds of some protectionists over the question of imports of woollen goods under the new tariff. We are now importing a disastrous quantity, they say, such as no truly American tariff would ever allow to come in. One answer to this is to show that even greater amounts came in during a corresponding period under the McKinley tariff. The *Wool and Cotton Reporter* published comparative tables last week showing "a heavy increase" in the imports over the past year or two, "but, as compared with those of the fiscal year 1892-'93, the returns for the ten months of the current year make a far less discouraging showing, especially on dress goods and cloths." This is the way to shut a McKinley mouth. The way to shut a merely rational mouth is to take the position that if we import woollen goods, it is because we want them, and have something to give in exchange for them, and can spend our time to better advantage than in making them ourselves. The bigger the quantities we import, the greater amount of things we have to give in exchange for them, the better our wages and profits and general prosperity.

The new Secretary of State enters upon his office with a singularly peaceful and easy prospect, so far as foreign nations are concerned, owing to the unappreciated good sense and patriotism of his lamented predecessor. He has, therefore, a very exceptional chance to turn his thoughts to the reform of our consular service—a reform loudly called for by every one who has really looked into the matter in a statesmanlike and impartial way. More than one Secretary, notably Mr. Blaine, has suggested a reform of our consular system. Bills for its reconstruction on the merit basis have often been introduced into Congress. In the last Congress Senator Morgan had a good bill, which he tried to affix to the diplomatic appropriation bill; but our sapient Senators pronounced it not germane, at the same time that they accepted the appendage of a Government cable to Hawaii. Other bills were introduced in the House, one by Mr. Storer of Ohio; but they had no chance. The Hon. James B. McCreary of Kentucky, chairman of the House committee on foreign affairs, has no belief in any such pernicious novelties as the merit system; his name is recorded in the affirmative to strike out the appropriation for the Civil-Service Commission. No bill to take consulships out of politics could ever have passed the ordeal of a committee of which he was chairman.

But let not Secretary Olney wait for Congress. Let him as head of the State Department formulate a system for classifying, for examining, for promoting, for retaining consuls. Let it include examinations in foreign languages, in foreign products and statistics, in history—for the higher grades, in commercial and international law. The salaries, and the rank as determined by salaries, are not badly established by existing acts. They might be recast, but they will do well enough. Let Mr. Olney get Mr. Cleveland's assent to such a plan, and put it into immediate operation. The appointment of consuls is in the hands of the President, subject to the Senate's approval. He and the Secretary of State are emphatically the judges of how our consular intercourse is to be conducted. Let the system go out as a department ordinance, let the risk boldly be taken that Congress will not endorse it by a regulating act including the like provision, or that a subsequent secretary will have the false courage to go back to the spoils system and induce the next President to reverse Mr. Cleveland's action. Secretary Gresham drew off entirely from the distribution of patronage. His political antecedents made him perhaps the wrong man to grapple with the problem, and he had other work. Mr. Olney has the power; he has given strong indications that he has the will; and surely the way is now open to him.

The signing by the President of an order bringing the employees of the Government Printing Office at Washington under the civil-service rules is one of the most emphatic demonstrations of the practical success of our system of civil-service reform that have ever been offered. In the first place, it is most significant that the President's act was a compliance with a request made by the persons affected. Here is

proof positive that civil-service rules not only do not work injustice, do not keep out of employment persons most fitted for the positions, but do afford protection to competent men when once their positions are secured. The signing of the order proves also that it is practicable to test the work of such employees as printers in the Government service, and upsets that old-time complaint that civil-service reform is adapted only to college graduates. A President not heartily committed to the rescue of the service from the spoilsmen could have found excuse enough for delaying action in this matter. President Cleveland, however, had already demonstrated his ability to overcome obstacles of this kind.

We learn from the *Columbia Spectator* that a most serious and alarming condition of affairs exists in the Columbia Law School. Eighteen out of forty-nine in the graduating class have been conditioned, thereby losing their degrees, and of nineteen seniors in the School of Arts who elected courses in law, eight "have been similarly treated." Nor should it be supposed that this was simply an ordinary case of deficient scholarship, or bad habits, or laziness. On the contrary, these conditioned men, according to the "unanimous opinion of their classmates," "far from being deserving of the treatment accorded them," were "among the brightest and most conscientious men in the class." This is grave enough, and we agree with the *Spectator* that "the surprisingly large number of men reported deficient reflects on the faculty, not on the students." The students have certainly done all that could be asked. They furnish bright and conscientious men, and then the faculty condition them. In such a state of affairs, it will not take "an unprejudiced observer" long, as the *Spectator* remarks, to see where the blame should be placed; and it asks with great force and pertinency, "Has a professor a right to condition men when he has been extremely slipshod in his own work?" Clearly, the professor is the man that should have been conditioned, not the bright and conscientious student whom all his classmates would have voted a degree *summa cum laude*. We are glad to see that the *Spectator* does not propose to let the affair drop. It calls upon the trustees to make a thorough investigation of the Law School, and settle once for all the great question, "Has a student no rights which a professor is bound to respect?" For our part, we never heard of such an outrage, except in the matter of civil-service examinations. In those, as everybody knows, the manly and bright and conscientious men always fail, and it is only the stupid and incompetent and shamefaced fellows who get through.

The decision of the United States Court of Appeals in the South Carolina registration case, reversing Judge Goff's ruling and dissolving the injunction he had granted, is based on the general ground that the Federal courts cannot pass upon abstract political questions. Some State courts of highest resort pronounce upon the constitutionality of laws as an abstract proposition, but the United States Supreme Court never does. It is essentially a "case" court. Somebody must show that he is injured or imperilled, either in his property or civil rights, by any given legislation before the court will so much as take up the question of its constitutionality. The fact that the averments in the complaint in the South Carolina case did not clearly assert a threatened infringement of such rights is plainly affirmed by the court to be the reason why it saw "no adequate ground for equity interposition." In other words, the registration laws, offensive and probably intentionally proscriptive as they are, were drawn in such general terms that no individual could positively declare that they were aimed at him, or that they directly impaired his rights under the Federal Constitution. The wrong, if any, was a political wrong, and the remedy must also be political. Doubtless the case will yet be heard before the Supreme Court, but there appears little reason to question that the general principles laid down by Chief-Justice Fuller in this Circuit Court decision will be sustained on final appeal.

The "yellow peril" is what is now troubling excitable folk in Europe. This does not refer to the deadly ravages of the yellow metal, from which people suffer in inverse ratio to the amount of the said metal they have about them, nor yet to the literary "yellows," which have hastened the passage of so many writers, as Mr. Zangwill says, into the sere and Yellow Book. The phrase covers, rather, the fear of a tremendous conflict impending with the yellow races of the Orient. It is to come, first of all, in the form of a crushing industrial competition. China and Japan are not extending their commercial treaties for nothing. They are planning to do the most gigantic dumping of cheap goods upon helpless Europe that the world ever saw. With their cheap and inexhaustible labor supply, with their patience, their artistic endowment, their quickness to adopt and appropriate all mechanic arts, who can stand against them? Perhaps the afflicted Europeans will try to repel the cheap goods by force of arms, but that will only bring on an unequal combat with the swarming millions who are even now aching for a chance to overrun Europe. These horrible imaginings will do to furnish forth an evening's gossip or evoke editorial wisdom; but the impending ravaging of Europe by the hordes of the East is even less likely to come off now than any time these two thousand years, during which it has been steadily predicted but never realized.

The International Miners' Congress, which met in Paris during the first week in June, did not receive the customary amount of attention this year. This may have been due in part to the comparatively small number of delegates, several of the great English mining unions having gone wholly unrepresented. But it is probably attributable more largely to the fact that the international fad is wearing out, and that a weary world is becoming more and more sceptical about the possibility of disposing of all the ills of life by international resolutions. Things like silver, an eight-hour day, over-production, a universal strike, old-age insurance, and employers' liability, that are too formidable for nations to grapple with singly, are pretty sure to be too much for them united. The congress, however, was singularly unanimous, and upon this fact the president congratulated it in his closing speech. Resolutions in favor of good wages for the coal-workers in all countries, and, at the same time, of fair interest on capital, were passed in perfect harmony. So was a sentimental resolve in favor of an eight-hour day. So was a declaration in favor of making employers responsible for all accidents, even where contributory negligence could be proved in the men. Such harmony is no doubt delightful, but it argues that the men of practical common sense either kept away or kept still.

It must be admitted that the English Government made a pretty abject submission to their Irish allies on Monday in the matter of the Cromwell statue. The grant for the statue should either never have been proposed, or should have been insisted upon and carried, as it could easily have been with Conservative help, in the teeth of the Irish. But the spirit of the ministry is evidently broken. Even rough-spoken Sir William Harcourt is getting meek and mild under the repeated losses of seats in bye-elections. He was very sharp with an ugly Scotch Liberal a few weeks ago, who wanted him to urge the Crofters' bill forward, threatening to resign from Parliament if his request was not granted. Sir William stiffly told Mr. Mac Gregor he could do as he pleased, and the angry Scot did resign. The result of the election to fill the vacancy was the loss of an apparently safe Liberal seat. A majority of only half-a-dozen or so cannot stand depletion in that way. If the ministry hold on, they will do so only at the pleasure of unruly followers, who will doubtless threaten and humiliate them from day to day as they perceive their power. Clinging to office under such circumstances is rather a melancholy business; it certainly will not lend the Government any prestige or put them in better shape for the general election, which they cannot stave off much longer in any event; when it does come, general opinion in England is that a Tory majority will be certain.

PLENTY OF MONEY FOR THE PEOPLE.

MAHONE — Gen. Mahone — of Virginia, whose first choice for President is Don Cameron, lays down the following platform for his party:

"I am for more money; I don't care whether it is silver money or shinplasters. It does not seem to me to make any difference. . . . Of course, we should keep within proper bounds in issuing money, but we want to have that article sufficiently plentiful to allow the people to get hold of it."

This is the platform that the convention in session last week at Memphis really stood on. The discussions about silver were mere wind of doctrine. The delegates had, it was said, cards stuck in their hats bearing the device "16 to 1," which were intended to make the public believe that they had settled the great question of the ratio, and after mature consideration had agreed that anybody who wants to exchange gold for silver ought to do it at that rate. But this is really what the boys call "poppycock." The delegates do not care what the ratio is, because few or none of them possess either metal in quantities worth mention. The object of the convention was not to regulate the currency, but to allow the people to get hold of some money. The apparent unconcern of the bimetallists about the ratio has always astonished the monometallists. "How can they," the spectators have always asked, "keep on agitating in this way without ever mentioning the exact rate at which they were going to make silver exchange for gold? Ought they not to inform the public what the purchasing power of silver is to be under their system?"

The answer to these questions is, that the great bulk of active bimetallists as well as of silver-men never expect to engage in exchange operations to any great extent. The mass of them are either in debt, or have so little gold or silver that the ratio is hardly of any consequence to them. Most of them might well exclaim with Mahone: "I care nothing for your ratio or your material; what I want is money! I am entitled, all the papers tell me, to fifty dollars per caput, whereas I haven't a dollar in the house. What is the use of a 'caput' if the dollars that go with it are not forthcoming?" The price of commodities, except articles of food and clothing, is to a man who does not possess them a matter of supreme indifference. Diamonds might double in value to-morrow, leaving the mass of mankind perfectly unmoved. This accounts for the open-mindedness of most of the silver-men in the matter of ratio, and fineness, and all cognate questions. You can have any ratio you please, and make your money of any material you please, as far as they are concerned. There is, however, one kind of money on which they look with suspicion, and that is "honest money." The chaplain of the recent convention prayed that their labors might hasten the establishment of such money, *eo nomine*, but he was promptly called to account, and only got off by explaining that he meant "silver." The term "honest" recalls the old monarchical superstition that money is a measure of value; whereas, in our day, it is a commodity to be issued by the Government "direct to the people." A commodity issued direct to the people is neither honest nor dishonest. It is simply scarce or plentiful.

The attitude of such nations as Greece, Italy, Spain, Portugal, and Turkey towards silver is much the same as that of our silver-men. Having neither silver nor gold of their own, they are naturally indifferent to "the ratio," and would agree with England and America to keep it at any ratio they chose; 16 to 1, 30 to 1, 50 to 1—it would be all the same to them. It would be like a partnership between Mr. Vanderbilt and Mike Daly, to carry several blocks of real estate for an indefinite period. Mike would hardly make trouble about the rate of interest or the assessment for taxation. How the irredeemable-paper-money states would figure in the "international agreement," or what ratio their shinplasters would bear to gold under the treaty, has never been explained, and never will be, nor is it necessary. The big states can arrange it to suit themselves, but the others are sure to have the laugh on them in the end.

Foreigners who feel troubled by such bodies as the Memphis silver convention because they have interests in the United States, will never know what peace is until they have thoroughly familiarized themselves with the nature and history of American "crazes." These crazes are in reality fits of mild insanity, at present peculiar to this country, but likely to become endemic in all countries as democratic institutions spread. The attack is brought on by the combined action of publicity and impecuniosity. The impecunious man is generally unhappy, and in a large number of cases his impecuniosity is due to dislike of steady industry, or to some moral defect which makes steady employment difficult. Under these circumstances an American gifted with fluency and fond of notoriety almost inevitably turns his attention to defects in our government, by way of accounting for his own condition. A few blasts on his horn wake up others similarly situated in other States. They come together; they compare notes; they find their condition inexplicable except as the result of conspiracy or malicious legislation. They resolve to mend matters at whatever cost. They call conventions; they rope in blatherskite editors; they make the welkin ring with their tale of wrong. After this has gone on for some months it begins to attract the attention of the industrious and rational. The noise increases; the industrious and rational get frightened and begin to issue pamphlets, and make speeches, and call conventions too, and in a few months more the "craze" subsides. The leaders turn book-agents, insurance agents, or assistant editors, or drummers for patents, and the world goes on as before. This is very much the history of the Granger craze, the greenback craze, the Powderly craze, and others. They are all plans for getting hold of other people's money without working for it, and none is more fascinating than the plan of being able to make purchases with worthless currency. There is an appearance of fairness about this which tickles a crazemonger, and he enjoys frightening property-holders, who have probably often refused him a loan or pressed him discourteously for a board bill.

A NEW CORRUPT-PRACTICE LAW.

So far as we have observed, Minnesota is the only State which has enacted a corrupt-practice law during the present legislative year. This raises the number of such laws in this country to nine, the other eight being in New York, Massachusetts, California, Missouri, Colorado, Michigan, Indiana, and Kansas. Of these, as we have pointed out on previous occasions, by far the most comprehensive and stringent in their scope are the statutes of California and Missouri. These are, in fact, scientific adaptations of the English corrupt-practices act of 1883 to American needs, and if they were sufficiently sustained by public opinion, there can be no doubt that they would be effective in operation. We regret to say that such is not the case with either of them. The California law is said to be practically a dead letter, since nobody pays attention to its requirements. The Missouri law is treated with more respect, and has been moderately successful in restricting expenditures, but it has not been rigidly enforced. The Massachusetts law has been useful in giving publicity to the amount of money spent in elections, but beyond that has not amounted to much. The New York law, which requires sworn publication after election of receipts and expenditures by candidates only, not by campaign committees, is of little or no account. The Kansas law, while simple in its requirements, has been successful in diminishing expenditures and in restricting corruption. The laws of Michigan, Colorado, and Indiana are very inadequate, and the results attained by them are inconsiderable.

The law which Minnesota will test in its next campaign and election is in many respects an excellent one. Next to the laws of Missouri and California, it is the most carefully drawn of the nine. It requires sworn publication after election of all moneys received and spent by candidates and committees, and places maximum limits to expenditures in all cases. These limits are fixed in the same manner as in the Missouri law, that is, on a ratio based upon the number of voters, as follows: For 5,000 voters or less, $250; for each 100 voters over 5,000, and under 25,000, $2; for each 100 voters over 25,000 and

under 50,000, $1; and for each 100 voters over 50,000, 50 cents—the number of voters to be ascertained from the number of votes cast for all the candidates for such office at the last preceding regular election. The schedules of the Missouri law are the same, except that the amount allowed for 5,000 voters or less is, under that law, only $100, instead of $250.

The provisions for enforcing the Minnesota law are copied mainly from the Missouri law, and permit the candidate receiving the next highest number of votes to that cast for the successful candidate, at any time during the latter's term of office, to make application by affidavit to the Attorney-General to bring an action to have him ousted from office on the ground of violation of any of the terms of the act. Such application must be accompanied by a bond of $1,000 as the means of paying possible costs for which the State may be made liable under the suit, and the Attorney-General must begin the suit within ten days after the application is filed. In case of refusal of the prosecuting officers, the contestant may bring suit in the name of the State, but at his own expense. If the charges are sustained, the defendant is to be ousted from his office, and that office is to be awarded to the plaintiff, unless the latter be found guilty of some violation of the law, in which case the office is to be declared vacant, and is to be filled either by appointment or by a new election.

The law is amply specific and stringent to secure honest elections by making impossible the corrupt use of money without exposure and punishment, provided there be in Minnesota the public opinion necessary to compel its enforcement. Unless that opinion exists, the law will not help matters. It must be confessed that the public mind has not yet been aroused to the importance of this question. The politicians everywhere know that they do not incur much risk either in refusing to pass such laws or in violating them after they have been passed. Then, too, few communities have the machinery or organizations which are necessary to insist upon the law's enforcement. A league was formed for the purpose in Massachusetts a few years ago, but nothing has been heard of its work since. Candidates very seldom are disposed to contest in the courts the success of a rival, for the reason that in most instances a legal investigation is in danger of revealing unlawful practices on both sides.

In New York city an admirable agency exists for the enforcement of a thoroughgoing law in the Good Government clubs. These, by making it their business to collect evidence and to bring suspected violators into court, could make such a law a veritable terror. The politicians scent this danger from afar, with their habitual vigilance, and consequently refuse to take any chances. Whenever the Platt majority in the last New York Legislature got sight of a measure converting the present State law into a statute which might be made effective in practice, they showed it no mercy. No less than three such measures were defeated in the lower house. This is the best testimony possible that a good law, fearlessly and thoroughly enforced, would be a deadly enemy to corruption in elections, and it ought to lead to an awakening of public interest in the subject. No law would be complete for New York which did not cover nominating conventions as well as elections, for it is in those that the money is used which the bosses of both parties collect as the "price of peace" from the corporations.

OUR FOREIGN RELATIONS LITERATURE.

It is a very proper rule at the State Department not to publish despatches bearing on pending complications so long as there is any danger of such publicity embarrassing the negotiations. Many of these documents are never printed at all. While, therefore, the volume of 'Foreign Relations' just sent out gives no hint concerning some questions still under discussion, the despatches contain details of events of varying interest that have taken place within the last year. At some of our legations the same question arises year after year. It is always the old dog in a new doublet. For example, there is usually an unspeakable Turk who emigrates to the United States, becomes naturalized, and immediately returns to his native heath, claiming freedom from Ottoman sovereignty on account of his acquired American citizenship. Similar cases often occur in Russia, and, less frequently, in Germany. It is usually found, upon examination, that American citizenship has been acquired, not with the intention of living in the United States, but solely for the purpose of returning to the native land as a "Civis Romanus," claiming exemption from military service as well as immunity from the operation of inconvenient laws. In such cases this Government is not disposed to uphold these new-made countrymen or to extend to them the protection of the flag.

It is to be hoped that Buffon's maxim, "The style is the man," is inapplicable to our envoys. Wellington's despatches compelled admiration even from their modest author, but the despatches of our ministers will probably not give so much satisfaction to their own composers. A few are excellent. Some are characterized by "decent debility." Others are so very remarkable that one wonders why the gentlemen who wrote them so badly ever thought themselves specially fitted to represent their country abroad. The two following sentences display little regard for the ordinary rules of construction or of grammar:

> "Bands of music . . . during the afternoon played ours as well as their own national airs."
>
> "I was assured of his purpose to do what laid in his power."

These peculiarities of expression may be passed over, but here is an extract which exhibits not only a lack of culture, but at the same time a great want of courtesy in dealing with a friendly government. The commander of the United States steamer *San Francisco* had been instructed to assist our Minister, if necessary, in settling the Argüello case. The captain received his orders first and notified the Minister, who had not then received his instructions, but "assumed for my purpose with this Government on this occasion that they were something pretty perpendicular, containing a genuine American ring." He then launched forth this philippic:

> "You express to me, Mr. Minister, your friendship for the United States, and the President does the same; and then you jump on us with both feet and spit in our faces. Your action in the canal matter has advertised to all the civilized world your own lack of good faith. . . . Your notice of forfeiture of the canal concession, even though it be upon a frivolous ground and one not warranted and not founded in law, not only destroys the credit of the Interoceanic Canal Company, but it is the most ghastly stab under the fifth rib of the credit of your own Government which could be inflicted by the keenest Damascus blade."

Another minister, who did not bear in mind Talleyrand's motto, "Surtout pas de zèle," was reprimanded by the late Mr. Gresham for introducing into a conference with the Turkish Minister for Foreign Affairs a comparison between the constitutions of the United States and of Great Britain, which was "not only unnecessary, but inaccurate." The Secretary of State's despatch continues:

> "The Department specially regrets your saying to the Minister for Foreign Affairs, 'If your Excellency believes it would accomplish good, I will go yonder to your Padishah (the Sultan) and tell him that unless he heeds the advice of his ministers, who are trying to save the country from the devil, it will be bad for Turkey.'"

Wilkes remarked upon one occasion: "It was observed of Apelles's Venus that her flesh seemed as if she had been nourished by roses; Burke's oratory would sometimes make one suppose that he eats potatoes and drinks whiskey." But upon what meat do these our envoys feed? Sometimes our representatives drop into absolute incomprehensibility, as when a consul in Central America informed the United States Minister that certain Americans were "in limbo," meaning merely, it was afterwards ascertained, that the persons were in some danger of arrest. It is probable that these things will continue so long as the diplomatic and consular service remains a part of the spoils.

Unfamiliarity with diplomatic custom exhibits itself in many of the despatches. One minister asked the State Department whether he had authority to perform the marriage service in Nicaragua. Another envoy requested the Government of Bolivia to promote an officer of its army because of his civility in officially receiving the minister. On another occasion a minister arrogated to himself the authority to "appoint" a consul. When Thackeray was in Jerusalem, he met

the United States Consul-General for Syria, who, forsaking family and comfortable home, had accepted the appointment in the East in order that he and his favorite dove might be near the holy places at the millennium, which he believed was at hand. He explained his interpretation of the Apocalypse to the Lieutenant of the Sublime Porte, no doubt much to that official's astonishment. He was a kind, worthy, simple man. His knowledge of Syria was limited to the information which he had derived from prophecy, but that was enough to secure his appointment as United States Consul-General. We are not entirely through with selecting foreign representatives in that way.

THE HORSE.

THE *Evening Post* prints a very virulent letter directed against the horse, which, however, is not very far astray as to the future of that animal. But it is hardly fair to say of him that he has been "found out." There never has been any concealment or pretence about him. He has for some thousands of years shared with the camel the duty of furnishing the human race with its chief means of rapid locomotion. But no one who had any experience of him ever denied his extraordinary imperfection as a machine. What with his diseases and tenderness and temper and stupidity, he has been singularly ineffective as a mode of motion. In fact, it has been so difficult to make good use of him that the management of him has been in all ages a very difficult art, acquired only by very few people. Nor has he been particularly ornamental. The ordinary horse is not handsome. To get a handsome horse, very careful breeding, followed by a close, confined, artificial, and unhealthy life is absolutely necessary. To stay handsome, a horse has to be shut up in an expensive house, and treated with as much care as an invalid, and under the best of circumstances he does not last very long. Happy is the man who has a saddle-horse in use for five years. The number and variety of known and understood diseases to which he is liable are almost comic, to say nothing of the mysterious ones which no "vet" can find out. His attacks of insanity and panic, too, are frightfully frequent, although his courage in battle is undoubted.

Why, then, has man put up with him so long? For the simple reason that there was no substitute for him for travelling or fighting purposes. He has held his own because he had no competitor. He has been thrown out of employment as fast as science produced other means of getting the work done. The railroads stopped his use for long journeys. The old stage-horse is gone. It seems marvellous now that he could hold on so long when twelve miles a day was about as much as could have been got out of him. The trolley and the cable-car are driving him out of employment as a feeder of the railroads. Now he has been attacked in his last stronghold—as an instrument of pleasure—by the bicycle. In truth, as fast as means of doing without him are discovered he is laid aside. The chances are that some means of supplying electric power to light vehicles, like the bicycle or buggy, will be discovered before long, and then he will be relegated to cavalry, polo, and hunting. Riding in a wagon behind a horse is, in truth, not unlike employing as a driver a person liable to occasional fits of acute insanity. What may bring them on cannot be foreseen. A wheelbarrow, a bird in the bush, a railroad train, or a big dog may turn any horse into a maniac and kill his owner or his family.

This long dependence of humanity on the horse has furnished a striking illustration of the adaptability of the race to inevitable circumstances. Although he fell very far short of furnishing cheap, easy, or safe locomotion, he has been treated in all ages as one of the noblest of beasts. The description of the war-horse in the Bible has been accepted for many ages as a good picture of the reality, although very few horses indeed ever answered to it. The fact, too, that he is extraordinarily difficult to use and to manage, far from causing complaint, simply developed a new art which was held in great honor and brought in much profit to its possessors. Nobody has ever blamed or depreciated the horse for being vicious, or silly, or intractable, or skittish, or obstinate, or tricky. The blame has all fallen on man for not being able to get the better of him. The good horseman who can successfully resist the horse's efforts to get rid of him has always been held in high esteem, but nobody has ever found fault with the horse for trying to get rid of him. If the horse had been looked on as what he really was, however — an industrial machine — he would have been treated as a calamity. A machine which behaved as he has behaved, would have been universally decried and shunned.

But there is one excuse for him of which the *Evening Post's* correspondent makes no mention, but which accounts for some part of his failure to progress in historic times. His size and peculiarities of digestion have made his close association with the more cultivated portion of the human species impossible. He has consequently been cut off from the advantages enjoyed by the dog, which everywhere shares in household life, has become man's friend and companion, and coöperates intelligently in some of the work of the world. This is largely due to the fact that the dog is able to enter the dwelling-house and lie by the fireside and live in constant and familiar intercourse with his master and his family. The horse, on the other hand, is relegated to the mercies of one of the lowest classes of the community—the hostlers, or grooms, or teamsters—who, as a rule, tyrannize over him, and suppress or discourage rather than develop his intelligence. In their hands, in fact, he is exposed to all the blighting influences of slavery. The life he leads under their rule, combined with the unhealthiness of the abodes in which they keep him, would brutalize man himself.

To show the importance of this we have only to look at the horse under conditions of life similar to those of the dog, as in Arabia. There he grows up in the tent or at the tent door, among the children, and although he does not join in the family life as intelligently as the dog, the owner's care and companionship have made him far more sociable than the European horse. The "runaway," or panic, is unknown among Arab horses, and so is what we call "vice"—that is, bits of deviltry intended to mar his usefulness. He is gentle, tractable, ready to serve and do his best, and is in such sympathy with his master that he is not afraid of anything which does not frighten his rider. As matters stand, the cheap horse, with few good points, seems doomed. The costly good-looking horse will probably last long for hunting and cavalry, and great pains will be taken to breed him. The demand for cavalry will always be great, as long as the art of killing remains in such high esteem. No charging machine will ever be invented, but it is a question whether scouting will not be done far more effectively on bicycles than on horses. In that sort of service bottom and swiftness are what tell, and in these the horse as compared to the wheel, is "nowhere." But we must not discharge the horse without recalling the great part he has played in the work of civilization, and the number of glorious fields on which he has laid down his life side by side with his master. The epitaph on the Duke of Wellington's Waterloo charger has much suggestion in it:

> "God's humble instrument, though meaner clay,
> Must share the triumph of that glorious day."

"MIDSUMMER NIGHT'S DREAM" AT SMITH COLLEGE.

NORTHAMPTON, MASS., June 17, 1895.

THE readers of the *Nation* may remember that in June, 1889, it gave a brief account of the "Electra" of Sophocles as presented in the Greek by the Senior class of Smith College. Every June since then the graduating class has given a play for the double purpose of entertaining its friends and affording a definite expression of a somewhat uncommon interpretation of the relation between art and science in education. These plays have all been managed by the Senior class. The money for the necessary expenses has been contributed by the members of the class, and the business connected with it carried through by a committee appointed for the purpose. The conduct of these plays has been looked upon as a valuable experience in administration, apart from the æsthetic discipline gained by the actors or the æsthetic culture shared by the class at large with the public.

Besides the "Electra," three of these efforts have had a distinct value for the interests that they have embodied or for the training that they have required. In 1890 the "Spanish Gypsy" of George Eliot was given; in 1892, Browning's "Colombe's Birthday"; this year, June 14 and 15, Shakspere's "A Midsummer Night's Dream." This work was undertaken with a profound sense of its delicacy and difficulty, but with an equally profound conviction that it is possible to interest students in giving, and audiences in hearing, something better than Hasty Pudding plays or adaptations of fourth-rate French comedy. From the beginning, the departments of elocution in the college and the director of the play earnestly emphasized the desirability of making the performance as little spectacular and professional as possible, and of rendering prominent the nature and poetry in the play. The result richly justified their confidence. The play was successful at exactly the points where it was hoped that it would be. Its beauty, refinement, variety, humor, and pure poetry were adequately represented and throughly appreciated. One clever critic of the modern drama declared that it had convinced him that Shakspere ought always to be acted to be understood, and that he had received his first satisfactory demonstration that Shakspere was really a great constructive playwright. Perhaps the committee of the class and their counsellors, Miss Peck and Mr. Young, would ask no more adequate recognition of what they were attempting for both students and audience.

The presentation embodied several interesting departures from stage tradition. The costumes were designed and made almost entirely by the students themselves. They were studied as carefully as possible to be suitable to their wearers and conformable to the historic setting. The cuts in the play were made also with a view to the peculiar circumstances of the presentation. In the third scene of act ii. a very beautiful tableau was introduced of *Oberon* bending over the sleeping *Titania* as the fairies retreat into the distance after lulling her to sleep by their song and dance. In the fourth act *Theseus* and his train appear after a gradual sunrise and through real trees introduced for the sake of a more natural effect than the one commonly produced at this point, where the lovers, in the broadest daylight, lie undiscovered at *Theseus's* very feet through several long speeches. After the departure of the royal train *Puck* is discovered in the balcony outside the palace. This arrangement was carried out by Samuel Phelps, but has not been used in this country before. The final scene of the play was left to the fairies and to *Puck*. The shadows and the fairy blessing on the house and its owner were first in possession, and then the Della Robbia face and figure of *Puck* were half revealed in the glimmering light for his charming epilogue. So it was hoped that the sprite-like, dream-like, other-world element might be last and most abiding.

Throughout the performance, the grotesque and the clownish were used only as foils to the more delicate and romantic suggestions of the text. At the moment of *Titania's* deepest infatuation, the attendant fairies *Peaseblossom*, *Cobweb*, *Moth*, and *Mustardseed* were represented as beautiful and interesting. They danced about the figure of *Bottom*, fitting expressions of *Titania's* heart and mind before her eyes had suffered their "hateful imperfection." The acting was far less amateurish than might have been expected. All the fairy train were beautiful suggestions, reminiscent of Botticelli, made possible by drilling for months in Delsarte gymnastics. Even the hackneyed passages were impressive and poetical. As for the mechanicals, they were the strongest part of the play. They never once suggested women in disguise, and from *Bottom*, with his remarkably clever "business" and original interpretation of his office as a fussy vulgar, to the "under-study" dog, were exquisitely mirth-provoking.

In reviewing such an effort as this a number of points need consideration. In the first place, the performance is a monument to the practical financiering of the students. The sum of money at their disposal is limited by the faculty to $900. This fact is further memorable as an indication of the democratic spirit fostered by the entire work. It is intended to represent the whole class, and as fully and impartially as possible. The poorest student has as much interest in it as the richest, and may be chairman of the executive committee. It is further noteworthy in giving some other medium of expression for the student experience than that found in the purely mental or academic exercises customary at the close of a college course. It is most seriously conceived, most seriously carried out, and whether successful or not from the point of view of the public, considered most remunerative by the students. From the point of view of the public, I think it may be said that such a play under such conditions gives as pure a form of entertainment as can be imagined, and affords indefinite suggestion with regard to the limits imposed by the present dramatic conventions. The success of this performance was due to the enthusiasm of the actors and to the insight and untiring efforts of Miss Ludella L. Peck and Mr. Alfred Young. X.

DURHAM DOCK LABORERS AND PITMEN.—I.

ENGLAND, May 10, 1895.

IT is commonly said in the North of England that what Durham thinks to-day the rest of England will think when it wakes up; and certainly Newcastle, which is in many ways the capital of the North, seems to be taking, from a political point of view, the place which Manchester held under the leadership of Mr. Bright. It is the centre of that thickly populated district of old Northumbria which has undergone such strange vicissitudes; which was Christianized by Columba, Aidan, and the Venerable Bede; which was ravaged and laid waste by William the Conqueror; which for centuries was debatable land, the scene of continual inroads and repulses between the Scotch and English; and which finally towards the end of last century sprang, by the help of steam and the increasing need for coal, into wonderful prosperity.

For, on the Tyneside, natural facilities abundantly encourage the production of wealth. There is a large supply of iron ore; there are almost limitless resources of coal for smelting; and there is a magnificent river-way. With such advantages it is not surprising that Messrs. Armstrong and scores of other ship-builders should have chosen this site for their works, or that from one dock alone —Tyne Dock—as much as 27,000 tons of coal should daily be shipped abroad. Both sides of the river from Newcastle to North and South Shields are indeed so crowded with workshops, ship-yards, and their attendant populations that the whole district seems little else than a suburban district of another metropolis. Trains run almost every quarter of an hour throughout the day from Shields to Gateshead, from Tynemouth to Newcastle, and are as densely crowded as the Underground in London or the overhead railways in New York. The people in consequence are as quick and nimble-witted as the city-bred Londoners; though, because of the stronger element of Norwegian blood in their veins, or because of the more invigorating nature of their work and the nearness to strong sea-air, they have no want of backbone such as is said to arise from life in the enervating South.

In one of the parishes that border on the Tyne it was the writer's lot to spend two years of his life. Possibly no spot in England would have been so suitable a *point d'appui* for studying the social and economical problems which concern the industrial classes. In St. Mary's Tyne Dock there are no gentry, in the ordinary sense of the word, excepting the three resident clergy. This is unfortunately the case in most of the mining districts of Durham, for the smoke and the coal-dust have compelled landowners to move south. The population is between seven and eight thousand, who earn wages—(1.) as employees of the North Eastern Railway Company. This class includes engine-drivers, stokers, guards, porters, trimmers, teamers, shunters, plate-layers, and workmen; Dock officials, clerks, and policemen. (2.) Pitmen and men connected with the coal-pits of Boldon, Harton, Whitburn, and St. Hilda, which undermine the whole of the district including the town of Shields itself. (3.) Seamen, seagoing engineers, firemen, and the miscellaneous floating population of casual laborers, locally called "tag-rags," who appear, no one knows whence, to earn half a day's pay by unloading the timber-ships, and then disappear as suddenly as they have come.

Of Class I. it may be said that they are the aristocracy of the place. The N. E. R. is the great landlord and the chief employer of labor. It is the aim of all who are not already employed by this company to get their names into its books. Next in order of social precedence come the seagoing engineers and the chief hewers in the pits. The ordinary sailors and firemen, who are away from their homes for longer or shorter periods, are reckoned last upon the list.

From the point of view of wages, one section of Class I. is probably better paid than any other unskilled laborer in England. These are the "trimmers." Their work is to pack the coal in the holds of the ships as it is shot down from the huge "jetties" which run out into the Dock. It is most important, lest the cargo should shift, that no inch of waste room should be left between the coal and the sides and deck of the ship. But this means heavy shovelling for the "trimmers," in dark holds which they have to light with farthing candles; hot and stuffy work in the dust-laden atmosphere, which is bad when the cargo is coal, but worse when it is coke. In cramped positions, for they often have to shovel with scarcely a foot of room between the coal and the deck, standing knee-deep or half lying upon the rough lumps, this is about as parching and tiring work as can well be imagined. "Trimmers" wear several thicknesses of rough blue-black cloth shirts, for the danger of catching cold after sweating is great, and naturally the thirst which follows is a snare to many. They work in gangs of eight, over whom they choose a foreman or "crow," as he is called, to arrange their work, to see that coal is teamed down from the "tops" or "jetties" as it is wanted, and to re-

ceive and divide the pay. This is settled according to a fixed tariff per ton, and, as I have said, the trimmers are well paid. When the Dock is in full working, the average wages per head is rarely less than £3 per week, and often it is more. The work goes on day and night excepting Sundays, throughout the year, the men changing their shifts every fortnight. The day shift is from six A. M. to five P. M. and the night shift from five P. M. to six A. M., though naturally in contract jobs there is some overlapping. Men dislike the night shift, not so much because of working in the dark as because their sleep during the day is never so refreshing as at the natural time. Neither do wives like the night shift. In addition to the nuisance of having a husband in bed all day, for whom the house must be kept quiet, there is no small danger that the men will prefer the comfort of a public house in the early hours of the morning, and will come home later in the day very much the worse for whiskey. One public house, which has a commanding position exactly opposite the Dock gates, boasts that its rent is paid by takings before six o'clock in the morning. On a cold morning, before he opens his doors, the owner is careful to have 500 threepenny glasses of gin filled and ready to be consumed. If, however, the "trimmer" avoids the drink danger, he often becomes exceedingly well-to-do. He owns his house and garden, sends his children to the higher-grade schools, and frequently takes his wife and family into the country for a fortnight in the summer. The N. E. R. gives privilege tickets at a quarter of the ordinary fare to all its servants, and this enables them to travel cheaply and easily over all parts of the system.

The "teamer" is frequently a son of a "trimmer," who looks forward to being made a "trimmer" himself some day. His work is to knock out the bottoms of the coal-wagons over the tips, and shoot the coal down into the ships. This is a more dusty employment still, for the jetties, being high up, are exposed to the wind, and, on stormy nights, to driving snow and rain. The teamers also are paid according to the tonnage they team, but at a lower rate; and their wages range from thirty-five shillings to two pounds a week. They, too, of course, are subject to the changing day and night shift.

The boys who bring the coal-wagons from the "field" to the jetties, and take them back again empty, are called "bank riders." When a train of coal-wagons has been left in the "field" by an engine, little more steam-power is needed to bring five or six wagons, as they are needed, to the various "tips" a mile away. The bank rider unlooses so many wagons as he needs, is given a start by a tiny pilot engine, and then steers his trucks along a series of inclined planes, backwards and forwards by means of his brake, to the particular jetty which needs his coal. When trade is brisk, it not infrequently happens that a cargo is ordered from an inland pit for a Swedish railway, perhaps, or the gas-works at Rouen, is dismissed from the pit-mouth within twenty-four hours after receiving the order, is shipped the same night by bank riders, teamers, and trimmers, in common tramp steamers, and, within a week of leaving its deep bed in Durham, is driving a train in Upsala or a gas-engine in Normandy.

Men who spend their lives in this fashion you would expect to find strong and muscular. Their work in the open air in all weathers is healthy and invigorating. Their pay enables them to feed on the best of food, all the wives bake their own bread, and the demand for home-grown beef is very great. And indeed their physique is very striking. A large proportion are more than six feet high, with enormous shoulders and chests, forearms like a leg of mutton, and massive legs. These are almost always Northumbrians or Tynesiders of long descent, whose fathers first came to our shores in Norse Viking ships. But the largest men are not always the best workers in the cramped holds, and in the great trimmers' strike of twenty years ago many Southerners of inferior physique and lesser build from Norfolk and Suffolk were taken into employment, and have held their posts ever since.

Without being skilled mechanics, these men are far more intelligent and educated than most laborers. They have to exercise their brains in computing the amount of coals a ship will carry, and in driving bargains with the shipowners, who are men of every class and nationality. They are brought into touch, through the widening influence of a large dock, with many larger interests and varied ways of thinking. They have large cabins in the dock-yard, where their shovels are housed and their food is left by the children who bring them their hot dinners, and where they themselves sit in the intervals between work. Here they play whist and dominoes, or read the sporting and religious papers, and receive the clergy, who come one day in every week to give lectures and instruction. They have their Union and their temperance society, and are exceedingly generous to members in misfortune. Religiously they belong to every shade of thought. Romans, Anglicans, Baptists, Methodists, Congregationalists, and Freethinkers are all strongly represented. Some of them are local preachers among the Wesleyans, some officers in the Salvation Army, some Spiritualists. But the life in common tends to make them think much and discuss the questions of the day; while lectures on Shakspere given by a Baptist minister were carefully followed. Not infrequently the lecturer is heckled on all kinds of topics, religious, social, or political; he is asked, for instance, to justify the sovereignty of the Queen, or to say which came first into the world, an egg or a hen. This is in most cases, of course, the reflection of the Radical journals, which are almost universally read; and it must be said that until they understand how closely imperial interests affect their own livelihood, there is little in their local surroundings, except the Church, to make them Conservative. W.

LEOPARDI'S HOME.

RECANATI, May 8, 1895.

As our century falls into silence, we distinguish at least two Italian voices, of very different notes, that have gone forth from it into many lands, and seem likely to be listened to by a long posterity. One voice, Manzoni's, speaks a clear, wholesome message, abounding in wit, in love of the elemental human lot, in piety; the other voice, Leopardi's, sounds all the stops of despair, passing from pity to scorn, and from scorn to bitterness, but always beautiful, like the song of a hermit thrush. And the world, obeying an instinct which lies deep in the heart of man, has come to pay more attention to Leopardi than to Manzoni; for the genial author of the 'Promessi Sposi' and of the Catholic hymns furnishes delight, perhaps even consolation, but he does not answer, at least for our doubting, inquisitive generation, questions which every serious man must some time confront. To submit reason to dogma (to the dogma formulated by St. Thomas and encrusted with the superstitions of the subsequent six hundred years), to deny science, to close one's eyes to the amazing contradictions of our existence—all this has become for honest thinkers well-nigh impossible, and they naturally do not turn to Manzoni for enlightenment. His great achievement lay not in his philosophy, but in his pictures of the life round him, and we may enjoy his romance, as we enjoy any other beautiful work of art, without quarrelling with him for not making it philosophic. Fiction has become so sodden with social, political, religious, medical, or other propaganda that we can reverence Manzoni all the more that he refused to turn his novel into an ill-disguised tract.

But it is because Leopardi, whether in his poetry or in his prose (and in both he was a master), spoke out the doubt which consumed him, that his works have gone into many lands, and that he is held as the representative of that pessimism with which so much of the thought of our age is saturated. He at least gave one answer to the problem of life—a grim and terrible answer, yet one which, for reasons not here to be discussed, has been prevalent in these later decades. The caprice and injustice of destiny, the overwhelming realization of evil, the perpetuity of sin and pain—in a word, the apparent impossibility of reconciling the individual with the universe—left him but one solution, the preferability of annihilation. We think of another soul, Spinoza, equally impressed by this immense discrepancy between the individual and the infinite, and, remembering Spinoza's ecstasy at being a mere atom of infinity, we understand how temperament—that very fate against which Leopardi inveighed and which to Spinoza was God—determines our view of life. Leopardi was no whiner, and therefore it is that now, nearly sixty years after his death, new books about him appear every year, and that whatever concerned his personality has been carefully gleaned. His voice, intensified by rare genius, is the voice of those that suffer, or fail, or despair, a voice akin to that of Ecclesiastes, who summed up the pessimism of the Hebrews. And just as sorrow or pain enters sooner or later into the experience of every one, so at some time Leopardi appeals most intimately to many hearts. Even while the healthy soul knows fortitude and resignation to be indispensable, it cannot always forbear grief or stifle the sigh of anguish.

But for those who never have taken Leopardi thus seriously, his remarkable career, almost without parallel in literature, would more than justify a pilgrimage to his home. Born in 1798, of a noble family, at eleven years of age he had outstripped the utmost learning that the priests of Recanati could give him; at fourteen he had read the entire body of patristic literature in Latin and Greek; he learned Hebrew, German, French, English, and Spanish by himself; at twenty-one he had achieved more in poetry than any Italian since Petrarch; and thenceforward by the discerning few he was appreciated. But their appreciation brought him little solace and no money, so that to the end of his grievous life (he died in 1837) he hardly subsisted on the scanty stipend given him by his father, added to the irregular sums he earned by hack-work from the booksellers, and to the bounty of one or two friends. Poverty has so often been the comrade of genius that we should not lay stress on it in Leopardi's case, were it not an indica-

tion of family relations which go far to explain his abhorrence of Recanati. Leopardi's father, Count Monaldo, was rich, as wealth was measured by the nobles on the Adriatic coast, and yet he allowed his son only twelve *scudi* (or dollars) a month, although that son was an invalid, diseased in nerves and spine, requiring every comfort to make his physical existence barely tolerable. Count Monaldo's niggardliness has been much debated, but I have yet to find proof that it sprang from want of affection for his son; it seems more probable, on the contrary, that, being quite unable to understand Giacomo's genius, and dreading his anti-clerical opinions, the father wished to force Giacomo to stay at home, where his heresies could be smothered. Certainly the plea that the Count could afford no more than a beggar's portion will not persuade any one who has seen the Leopardi palace at Recanati.

On the other hand, the poet's invectives against his surroundings must be taken with much reserve. That he had no congenial companionship at Recanati is undeniable, but that the place itself or the neighboring country would suffice to explain his pessimism will be argued only by those who, like Taine, try to explain every genius by the acre it happens to be tethered in. As well pretend that Shakspere drew *Hamlet's* pessimism from Warwickshire, as that the beautiful country around Recanati caused Leopardi's pessimism. And as for lack of intellectual companionship, was Burns, then, so fortunate, or Carlyle at Ecclefechan? No; seek Leopardi's secret—if what is so patent can be called a secret—in his diseased nerves and spine, in the restless, insatiable mind unsupported by an adequate physique! Nature is as beautiful on the hills he haunted as she ever was in Arcady.

From Ancona a slow train takes you in less than an hour to the village of Porto Recanati, on the very margin of the Adriatic. Thence, by an excellent high-road, you drive in an hour to Recanati itself, which is built along a high ridge, and looks most picturesque with its old walls and towers and vast communal palace. The road winds among very fertile fields, every inch of which is cultivated. The backs of the curving hills are now deep with grass or wheat; in the lower fields the grain is almost ripe, and endless processions of mulberry-trees, trained in goblet shape, are festooned with vines. Innumerable flowers grow along the wayside; the road itself is bounded by hedges of white hawthorne, just blossoming; the farmers' houses are overrun with wistaria, or decked with little plots of purple iris. The peasants seem well-to-do, working, men and women together, in the vineyards. Some of the women still wear the traditional peasants' costumes, and the ox-carts, drawn by white oxen, have pictures or flowers or religious emblems painted on them. There is nothing in all this to suggest the approach to the shrine of pessimism.

The town, which we enter from the east, has narrow streets and, except the communal palace, no noteworthy buildings. In the chief square there is an admirable marble statue of Leopardi, by Panichi; it gives the large, intellectual head, the deep-set eyes, the pinched cheeks, and pained expression common to his later portraits. Eighty years ago, in these very streets, his fellows jeered at him. Five minutes distant from the square, near the western wall, is the Leopardi palace, a large, rambling brick structure. Beyond the entrance, instead of the customary courtyard, there is a marble "atrium and peristyle," completed, as a tablet informs us, by Count Monaldo for the admiration of posterity in 1798—the year of Giacomo's birth. Flights of marble steps lead to the second story, and the whole produces the effect of old-fashioned elegance tempered by a tendency towards the sepulchral.

The footman of the present Count unlocks the door leading to the Leopardi library, which consists of five rooms, connected by a corridor along the eastern side of the house, and thus gives the appearance of a series of vast alcoves rather than of separate rooms. The walls from floor to ceiling are filled with books—27,000 in all—the larger part bound in vellum, and arranged according to topics. The largest hall contains cabinets with many of the poet's manuscripts and other mementoes of him. There is also a cabinet of medals, bric-à-brac, and antiques, formed by his father, and his father's study. In these quarters, certainly not to be equalled in many private houses anywhere, young Leopardi grew up. The number of boys of genius who have had nearly 30,000 books under their father's roof must be exceedingly small, so that on this score Leopardi was not to be pitied—unless, indeed, we are to pity those into whose hands fortune places the means of their undoing. That Leopardi could ever have been robust was impossible, but that he speedily wrecked by over-study his frail physique is also unquestioned; and in this rich library the means of wrecking himself were at hand.

The windows of the rooms look towards the east, but the view is cut off by a row of bare, ugly houses, in one of which dwelt the coachman's pretty daughter, of whom he wrote under the name of "Nerina." He used to go out but seldom, an old servant who remembers him told us, and then alone. But even a short walk would bring him to one of the many points whence he got the views which he has described. If he looked eastward, he saw the rolling hills and rich valleys, and the Adriatic beyond; a little to the north, three miles away, he saw the dome of the shrine of Loreto, and then Castelfidardo, Osimo, and half-a-dozen other hill cities; westward, across great gulfs of green, he saw the Apennines. How easily the disciples of Buckle could account for a joyous poet reared amid this environment!

But most interesting, after the sight of his home itself, is that cabinet which holds his manuscripts, all neatly written, only the poems showing frequent emendations. Here is a large copy-book entitled "The Philosophic Essays of Giacomo Leopardi," and dated 1809, when he was eleven years old, and another, "The History of Astronomy," with the date 1813. In his case such titles were not vain, for there has probably been no other juvenile mind, except Mill's, which worked with the accuracy and vigor of the best-trained mature intellects at an age when most boys are, fortunately, still playing at leap-frog. We know how near Mill came to disasters in both physical and mental health, and how long it took him, through a life of intellectual action, to throw off the gloom wh ch that early abnormal strain fixed upon him; but Leopardi had no companionship to draw him out of himself, no great movement into which he could throw himself, and, worst of all, no constitution to endure the immense labors he engaged in. Towards the end of his life he protested that disease had had nothing to do with the pessimistic principles he professed; but psychologists to-day, familiar with neurotic conditions, will not heed his protest. They will wonder that a mind so tormented preserved to the last its remarkable powers rather than that its thoughts took the tinge of his suffering.

A frank biography of Leopardi is still lacking, but it is safe to say that it cannot be written by one who has not seen Leopardi's home. As your rickety carriage drives down the steep hill towards Castelfidardo, passing rich crops and innumerable wild flowers on either side, and you think of the palace and vast library, you will feel how personality lords it over environment. You will feel, too, that Leopardi's career, irrespective of his doctrines, gives no comfort to those easy optimists who blink facts. Prometheus on the rock, Laocoön in the toils—you have their modern instance in Leopardi. "Great men, great nations," says Emerson, "perceive the terror of life"; a life like Leopardi's is not to be confuted, but to be understood, before its example of terror can be bravely faced. W. R. T.

Correspondence.

THE JOURNAL OF THE BOARD OF TRADE.

To the Editor of The Nation:

Sir: I think the students of history throughout the country will be glad to know that "a circular recently issued by the Historical Society of Pennsylvania to its members asking contributions or a guarantee to the amount of $2,000 per annum for five years for the purpose of obtaining a full copy of the Journal of the Board of Trade from the original in the English Public Record Office," mentioned in your issue of the 13th, was so promptly responded to that the work has been begun.

Very respectfully yours,

F. D. Stone, Librarian.

Historical Society of Pennsylvania,
Philadelphia, June 13, 1895.

Notes.

Macmillan & Co. will soon publish 'Studies in Economics,' by Dr. William Smart; 'Mother and Daughter: An Uncompleted Sonnet Sequence,' by the late Mrs. Augusta Webster; and 'A Son of the Plains,' by Arthur Patterson.

From Duprat & Co. we have what appears to be the first of a series of volumes on the private libraries of New York. It is entitled 'The Library of Robert Hoe,' and has been prepared by O. A. Bierstadt, assistant librarian of the Astor Library. The book has been most expensively and beautifully made at the De Vinne Press, being printed on vellum paper, with 110 admirable illustrations, taken from MSS. and books in the collection described. There are some 150 manuscripts, the illuminated portion being unsurpassed in this country; and these are discussed in the first section. Louis XII., Matthias Corvinus, Lorenzo de' Medici, Maximilian I. and Charles V., Diana of Poitiers, and Anne de Beaujeu are some of the famous former possessors of them. There are five vellum Petrarch MSS., and the Oriental collection is also striking. Next follow the Incunabula, among which we shall specify only the *editio princeps* of Homer (1488); Printed Books of Hours; Aldines, with the Virgil of 1501, the first book printed in italic type, and a volume containing Melanchthon's autograph; Elzevirs, 200 in number, including imitations; French books, embracing a Montaigne with Voltaire's autograph; Eng-

lish books, among which we note Blake's 'Milton,' one of three extant out of the total twelve, a fine array of Bewicks, and an extra-illustrated Life of Stothard. The last section is given up to a miscellany in which a Testament inscribed to Bonaparte by the Widow Beauharnais, and bearing his autograph also, is a precious "human document." Eleven Groliers are here described and many exquisite bindings. Some of these treasures will perhaps find their way eventually into the consolidated New York Library. The present edition is limited to 350 copies.

Mr. Selden L. Whitcomb's 'Chronological Outlines of American Literature' (Macmillan) has been intelligently modelled upon F. Ryland's corresponding work for English Literature, and even contrives a column for the latter beside those devoted to Foreign Literature and the contemporary events in biography and history. The tables thus composed have an obvious convenience for students of any given year or period, and to a certain extent they have been indexed for the American portion by a list of the more prolific authors, with their works displayed beneath in order of publication. The same space, however, would, in our opinion, have been better given up to a complete index of every personal name, journal or magazine mentioned on the left hand (American) page. In this way we should have been directed to Poole's first 'Index to Periodicals' (1848), the founding of *Graham's Magazine* and the *Tribune* (1841), and of *Niles' Register* (1811), the beginning of Appletons' 'New American Cyclopædia' (1858), and of Dr. Lieber's 'Encyclopædia Americana' (1829), and the like. With these reserves we have only praise for the author of so great a labor.

The latest issue in the "Globe" series of Macmillan & Co. is a reduced edition of Lord Berners's translation of Froissart's Chronicles from the hand of Mr. G. C. Macaulay. When it was first published, 1521–1525, Lord Berners's Froissart was the most important work of modern history that had yet appeared in England, and to its influence has been attributed with much plausibility the noteworthy increase of interest in historical literature in the next generation. Lord Berners, while by no means the best prose-writer of his time, had certain peculiar qualifications for translating Froissart. He was deeply interested in history, and hardly less so in the chivalric romances, while as a nobleman and a courtier he was familiar with the language of chivalry so far as it survived at the court of Henry VIII. As a result his translation, although inaccurate from both ignorance and carelessness, reproduces the atmosphere and flavor of Froissart with a success far beyond that attained in the painstaking but prosaic version of Johnes. Mr. Macaulay has reprinted about one-third of the whole in the form of selected passages, maintaining the continuity of the narrative by brief summaries of the omitted portions. The majority of the omissions occur in the second part, where Froissart fell into great diffuseness. The selections are given as originally printed, save that the spelling has been modernized, misprints and faulty translations corrected, and the geographical names reduced to consistent forms. Mr. Macaulay has supplied a glossary, but has neglected to provide an index, which could have been made with very little trouble with the help of that in Johnes's edition.

'Dr. Judas' is the allegorical and not altogether satisfactory title, based upon the treachery of the drug, of a book better described alternatively as "A Portrayal of the Opium Habit," by W. R. Cobbe (Chicago: S. C. Griggs & Co.). It is the apparently genuine autobiography of an intelligent neurasthenic who, during an attack of illness, became a victim of the insidious sedative, which, introduced as a servant, speedily became master. Unlike many confessions, this portrayal does not indirectly allure to vice. Everywhere is the directest denial of De Quincy's dictum as to the "gates of Paradise." It is the portal and anteroom of hell, physically and to the spirit. This is an interesting psychological contribution, which intelligently, if somewhat floridly, displays the sufferings of the wretched souls whose escape from the toils is nearly impossible. The author claims to be well now, to have had the chains removed. There is no appearance of advertisement about his work, but he joyfully announces that the redemption of the most thoroughly enslaved is possible.

From Theodore Presser, Philadelphia, we have a volume of 423 pages devoted to 'Celebrated Pianists of the Past and Present'—a collection of 139 biographies, with portraits, by A. Ehrlich, who has also written a similar volume on 'Celebrated Violinists.' It is with some curiosity that one looks over the formidable list of "139 celebrated pianists," and one is hardly surprised to find that the word celebrated is taken in a very liberal sense. The book could have been made more valuable to students if it had included lists of compositions for the piano in each case, in place of rambling general remarks on the life of each composer and his works in all departments; but for those who wish a convenient bird's-eye view, Ehrlich's volume may be commended. The book is nearly up to date, Paderewski, Rosenthal, and Sauer being included. But why are Josef Hofmann and Anton Hegner omitted?

A 'Memoir of George Higinbotham, an Australian Politician and Chief-Justice of Victoria,' by Edward E. Morris, has been published by Macmillan & Co. Some interest attaches to such a career as is here depicted, because similar careers are common in our own country. The subject of the biography was a reporter, journalist, legislator, lawyer, Attorney-General, and Chief-Justice. But the political controversies in which he was engaged, although lively enough, are of as little interest except to students of political development as the battles of the kites and crows. Some constitutional questions were settled, but they have little bearing on the fundamentals of government. The biographer has slight literary qualifications for his task, and the life that he describes was on the whole of no more than local interest.

From Félix Alcan, Paris, we have the second series of the collected essays of the late Émile de Laveleye, which is to be followed by a third and final volume. M. de Laveleye was an extremely facile writer, and his writings are almost numberless; but he was less profound than prolific, and we think that few of his works will be found to have permanent value. Nevertheless, he treated many subjects out of the common line in an agreeable and suggestive manner, and those who have the knack of browsing judiciously in economic pastures will find among these essays not a few that will repay attention.

The income tax appears to be for this country a closed chapter of history, but in France the demand for its imposition, in a progressive form, is incessant and irrepressible. Those who are interested in the literature of the subject will find the arguments for the tax stated in a volume of speeches by M. Godefroy Cavaignac, published at Paris by Armand Colin & Cie.

M. Jules Payot, who has written largely in the philosophic reviews, and who made himself more widely known last year by his book on 'L'Éducation de la Volonté,' has just published a new study entitled 'L'Éducation de la Démocratie.' Although he agrees with the neo-Christian school as to the insufficiency of science and as to the necessity of a moral faith, he breaks with such leaders of that school as M. Melchior de Vogüé and M. Paul Desjardins by placing this necessary faith outside of dogmas and revealed religions, and basing it on the notion of human solidarity. Men need to be taught, he says, that altruism is a far more intelligent egoism than any merely personal egoism can be. Children should receive an *éducation altruiste pratique:* they should be brought in direct contact with the social injustices, with labor, and with poverty, but they should also be shown and made to understand the benefits which have come to the race through civilization. In this way, he thinks, they may be sheltered from the seductions of revolutionary socialists, and be brought to the conviction that the world, as it is, is going on very well, developing itself and gradually growing better.

M. Albert Soubies has already deserved well of all students of the stage, and he has now again won their gratitude by an account of 'La Comédie-Française depuis l'époque romantique, 1825-1894' (Paris: Fischbacker; New York: Dyrsen & Pfeiffer). The book itself is interesting, and in it can be traced the whole movement of the drama in France during the greater part of this century—a period second in brilliancy only to the age of Louis XIV. Even more important are the appended tables in which we have lists of all the plays acted at the Théâtre-Français in the past seventy years, with the number of performances of each, year by year. We have thus exhibited the relative popularity of Corneille, Molière, and Racine as the Romanticist movement rose to its height and then fell away, and as the Realistic movement in turn followed it. M. Soubies counts carefully for us the number of times Corneille has been acted by the Comédie-Française in these seventy years: it is 1,090, while the plays of Racine have furnished 1,623 performances. As is fit and proper, the Molière total is more than twice the combined totals of Corneille and Racine: it is 6,689.

Dr. Coues's remark, in his recent letter regarding Sergeant Floyd, that "his grave has been washed into the river," is likely to mislead. The exact truth is shown in the following words in a private letter by Mitchell Vincent, written last April: "My duties as a civil engineer in 1867-'8 upon the Sioux City and Pacific Railroad took me within forty feet of the grave of Charles Floyd. In 1857 his bones had been removed about two hundred feet back on the bluff, a small portion of the bones having dropped into the river before removal. The grave [pit] at that time was about two feet long and a foot wide, depressed about six inches below the surface of the ground. I intended to have the grave filled and put in better shape, but my work taking me away before the frost was out of the ground prevented my good resolutions bearing fruit. I did not see the spot again till last year, when all traces had been obliterated by the trampling of horses and cattle."

The success of Durham University's petition to the Crown for permission to confer degrees

on women students has apparently stirred anew the zeal of other friends of the higher education of women. At a recent large and representative meeting of the Oxford Association for the Education of Women, it was resolved by a majority of more than 4 to 1 (115 to 26), "that it is desirable that women students who have complied with the statutable conditions as regards residence and examinations should be admitted to the B.A. degree. . . ." As it has, we believe, always been contended by both Oxford and Cambridge that an act of Parliament is indispensable for their conferment of degrees on women, the Association further resolved to memorialize the University at once in favor of such action, and to circulate a petition for signatures among graduates of the University. The Oxford Association having hitherto been divided in regard to the policy of active agitation of the question of degrees for women, this fresh departure shows an unexpected growth of opinion.

In this connection it may be noted that the Association of Irish Schoolmistresses, which appealed some time ago to the Board of Trinity College, Dublin, for the admission of women to lectures and degree examinations, has been duly notified that Trinity College has no power, under its present constitution, to recognize women students; furthermore, the august board warns the Association that it would "oppose any act of Parliament conferring such power *unless* the measure affected Oxford and Cambridge." The claim of Trinity that her statutes are based on those of the ancient English universities, which still serve her for models, has naturally called forth a last word from the Irish petitioners, who suggest that the board has ample warrant for at least admitting women to college lectures and examinations.

An English correspondent writes that Charlecote is to be opened to visitors this summer, "quite free, or, at all events, almost." The Lucy family have hitherto been chary of admitting visitors to their home, so that this long-coveted permission will be welcome news to those Americans whose wanderings this year include a tour through Shakspere's country.

—The movement initiated at the Congress of Philologists and Archæologists in Philadelphia last winter for the establishment of an American School in Rome, similar in its main purposes to the American School of Classical Studies at Athens, has met with gratifying success. A large managing committee was organized, under the direction of Professors Hale, Warren, and Frothingham, and an appeal for financial support brought out prompt and generous subscriptions, so that the committee at its first meeting, held in this city in May, was enabled to make arrangements for opening the school in the autumn of the present year. Professor William G. Hale, of the University of Chicago, will go out as Director, and Professor A. L. Frothingham, jr., of Princeton University, as Associate Director for the academic year 1895-96. The object of the school, as set forth in its regulations, is "to promote the study of such subjects as Latin literature, as bearing on customs and institutions; inscriptions in Latin and in the Italic dialects; Latin palæography; the topography and antiquities of Rome itself; the archæology of ancient Italy (Italic, Etruscan, Roman) and of the early Christian, Mediæval, and Renaissance periods. It will furnish regular instruction and guidance in several or all of these fields, will encourage original research or exploration, and will coöperate with the Archæological Institute of America, with which it is affiliated." The school will probably occupy rooms adjoining those of the recently established American School of Architecture, in the Casino dell' Aurora of the Villa Ludovisi on the Pincian Hill. The successful establishment of a School at Rome will be gladly welcomed by all who are familiar with the admirable work which has been done in the past twelve years by the Athens School, and the stimulating influence it has exerted on Greek scholarship in this country. The two schools will coöperate with each other, and it is provided that a student in either school may study for a part of the year in the other. The Archæological Institute has granted to each School, for the year 1895-96, a fellowship of $600, and each School has established from its own resources a second fellowship of the same value. The school in Rome offers, further, a fellowship of $500, contributed by friends of the school, for the study of Christian archæology. These fellowships are open to Bachelors of Arts of universities and colleges in the United States and to other American students of similar attainments. Students may join the School for either a whole or a part of the scholastic year. No charge is made for tuition. Applicants should address, for the Greek School, Prof. John Williams White, Cambridge, Mass.; for the Roman School, Prof. A. L. Frothingham, jr., Princeton, N. J.

—The Harvard Law School recently paid a tribute to Prof. Langdell, who has just completed his twenty-fifth year as Dean of the School, by publishing a memorial number of the *Harvard Law Review* in his honor. It now announces that, in behalf of the graduate members of the school, it will celebrate Prof. Langdell's anniversary in Cambridge on the 25th inst. The occasion promises to be a notable one for both the character and number of the guests who are expected to be present, among whom are Chief Justice Fuller, '55, and Mr. Justice Brown, '59, of the Supreme Court of the United States; Secretary Olney, '58; Mr. Justice Holmes, '61, of the Massachusetts Supreme Court; and Joseph H. Choate, Esq., '54. The Association has been fortunate enough—such is the potency of Prof. Langdell's reputation—to induce Sir Frederick Pollock, who is probably the most agreeable, as well as one of the most learned, writers on the law now living, to come from England to deliver the memorial oration at Sanders Theatre. His address is to be at twelve o'clock, and at its close there will be a banquet in Memorial Hall, at which President Eliot, Prof. Langdell, and the invited guests are expected to speak. Tickets to the banquet, $2.50 each, may be procured, by members of the Law School Association only, of P. S. Abbot, 220 Devonshire Street, Boston, Mass., or in Cambridge, at Austin Hall, on the day of the meeting.

—Mr. Paul Leicester Ford has reprinted the enriched 'Notes on Virginia' from the third volume of his competent edition of the Writings of Jefferson. Even the fortunate owner of a copy may regret that only a hundred have been made up; and on another side he could wish that the index had been more elaborate, as a commercial edition might have justified. After the bibliography proper, Mr. Ford makes allusion to the controversy to which the 'Notes' gave rise, and the handle they furnished to the writer's political adversaries; and cites one tract wholly directed against the 'Notes' for their irreligious tendency. We think he might have done the same by Walker's 'Appeal,' which was at least half inspired by Jefferson's disparaging view of the capacity of the blacks, and which had the distinction of being submitted to the House of Delegates by the Governor of Virginia as an incendiary document in 1830. On p. 181 Mr. Ford refers in a foot-note to the Abbé Grégoire's incidental refutation of Jefferson on the same point, and on p. 179, apropos of the sweeping imputation of mathematical (or geometric) incapacity, it would have been in order to refer to Jefferson's well-known letter to the colored astronomer, Benjamin Banneker, from whom he received an almanac in answer to this passage in the 'Notes.' The terrific indictment of slavery which, more than any other consideration, made the prudent Jefferson hesitate about publishing the 'Notes,' did good service after his death as ammunition for the abolitionists; and it is curious enough that a work so freighted should have been, in Mr. Ford's words, "perhaps the most frequently reprinted book ever written in the United States south of Mason & Dixon's line." Only two editions, however, were issued south of that line, and both at Baltimore, by one publisher, and in 1800.

—Nothing is more curious in his whole treatment of the subject of slavery than the way in which Jefferson passes, from a humane caveat against a general conclusion derogatory to the natural capacity of the blacks, to a complete adoption of such a judgment, in the same paragraph. He reproaches his countrymen with never having viewed the red race (which he has already pronounced equal in capacity to the white) and the blacks "as subjects of natural history"; then advances it, "as a suspicion only," that the blacks, who were either created or have become distinct from the whites, are inferior to the latter "in the endowments both of body and mind"; then, as a lover of natural history, viewing "the gradations of all the races of animals with the eye of philosophy," thinks himself excusable for wishing "to keep those in the department of man as nature has formed them"; then, while wishing to "vindicate the liberty of human nature" by emancipating the blacks, is "anxious also to preserve its dignity and beauty." What hinders? Why, the perverse refusal of the whites to view them as subjects of natural history even in a state of freedom. Hence, when freed, the slave "is to be removed beyond the reach of mixture," lest he "stain the blood" of his late masters. Yet while the reprinting of the 'Notes' was most active, at the beginning of this century, Jefferson's opponents in his own State were openly charging him with keeping a negro mistress and having a mixed posterity, and Mrs. Trollope caught up the tale thirty years afterwards and gave it to the world, with a rhetorical change, as too notorious to hazard contradiction. "Povera e nuda vai, filosofia!"

—An entertaining book has recently been published in Berlin, by Frau Anna Seuron, who was for many years governess in the family of Count L. N. Tolstoy. The intimate knowledge which she acquired of the celebrated author's character, and of his relations to his wife, family, and the peasants, she has expressed with a frankness that will startle those who feel unqualified admiration for Count Tolstoy as a reformer and apostle of the lowly. Frau Seuron remains one of his devoted admirers, though the views which she announces, and the deductions which the reader cannot fail to draw from her anecdotes, would appear

logically not to permit of that attitude. She has shown the Count in a light which other writers have not had the opportunity of seeing, or about which they have thought it best merely to hint. This in no way discredits her assertions, which bear strong internal evidence of their truth. Frau Seuron declares that Count Tolstoy is not a harmonious, simple character, that he is not a genius, a true vein of precious metal in the rock, but a patchwork, a bit of mosaic, whose cracks and faults have been so well daubed over that they appear, to many people, to form a smooth, united surface. He is no anchorite, convinced of the nothingness of the world, who has conquered himself and has turned his back on it in disdain, but a man who has carried his vanity over into the "new life" which he has fashioned after his own pattern. When he finds that his sins and his principles cannot be reconciled by any amount of discussion, he turns a somersault from his point of view, withdraws to his study, and begins, with all the more zeal, to set down in writing his laudations of the elementary principles of life which he has just outraged. After firmly refusing, for more than a year, to touch meat, he allowed his family to persuade him to eat poultry, though he maintained that he intended to adhere to his rules. But the attentive observer would hear the clatter of knife and fork in the dining-room during the night, and the next morning the cold roast beef which had been left on the table would be found half devoured. Tolstoy never confessed to his sin of weak indulgence, but Frau Seuron declares that she is sure of her facts. He also indulged surreptitiously in a smoke, after preaching against it. She concludes that, while the Count might be a temporary fanatic for abnegation, he was not built for a saint.

—As a proof of this she alleges his treatment of his own peasants, and of the poor and of beggars in general. His pockets were usually very tightly buttoned, even when a few kopeks would have relieved the distress. She accuses him of being indifferent, and says that momentary, strongly overpowering impulses of miserliness often made him hard-hearted. On such occasions he justified himself in his own eyes by his theories as to the evil of money and the blessings of poverty. For example, when the peasants of his village, Yasnaya Polyana, had but three spades among them, and lacked all the implements wherewith to cultivate the land, he refused to help them to buy the necessary tools. He said that "precisely this lack of implements made them lend to each other, and that was an act of helpful brotherly love." "When the Count, who was constantly talking and writing about brotherly love, talked with a begging peasant, the despot of the sixteenth century awoke in him. It was as if abysses lay between them. An evil look came into the Count's eyes, and the petitioner went away shaking his head." When the Countess Tolstoy, anxious for her own future and that of her children, wished to exploit his works, the Count vehemently protested against money, in his usual strain. But when the Countess persisted, and carried on affairs too openly, under his very nose, he "cut a somersault," went out, and chopped wood. He worked in earnest at such tasks as carting and distributing manure. He did not change his dress for dinner, and brought the odors in with him; as he has a strong taste for perfumes, and did not stint himself in the use of them, the combination of smells sometimes required strong nerves on the part of those present. Frau Seuron takes a very practical view of his arduous labors; they replace, she says, the riding and hunting which he has forsworn. His healthy, muscular frame requires a great deal of exercise, and he takes it in this form because it suits his health; and that is all there is to the fad of hard labor for the salvation of the soul.

—Mantchuria is a much more valuable possession than it is generally regarded, judging from the description of it in the *Scottish Geographical Magazine* for May, by the Rev. John Ross, D.D., for twenty-two years a resident in the country. In treating of the physical characteristics he remarks on the curious fact of the infrequency of earthquakes. Although in Japan, but a short distance away, they are of almost daily occurrence, he has known of only three slight shocks. The soil of the vast plain is composed of the rich loess, formed and continually renewed by the disintegration of the underlying rock. Its remarkable fertility is shown by the fact that the "tall" millet produces eight hundred fold, and the "small" millet is reputed to produce eight thousand fold. Wheat and barley come to maturity so rapidly that a second crop of some other kind can be sown on the ground and reaped in the same season. Gold is found in many places, but the present dynasty has steadily refused to permit mining, for two reasons—a superstitious fear of altering the configuration of the earth, and the lawlessness of the miners. Accordingly, even the search for gold, silver, or copper is penal throughout the province. There is one gold-mine near Kirin where "the miners have for generations made a little kingdom of their own and defied the Government." In many places, also, good coal crops out of the ground, but the people dare not touch it, though the extracting iron ore is barely tolerated in certain localities. The population, especially of the southern part, has increased very rapidly within the past twenty years, and Dr. Ross estimates it at 25,000,000. This is a far higher figure than most authorities give. The 'Statesman's Year-Book,' for instance, says 7,500,000. "On the great plain" villages and hamlets, each with its little grove of willow-trees, are so numerous and planted so thickly that you have scarcely left one behind before you enter another. In a radius of three and a half miles Dr. Ross found, by actual count, seventy-five villages, "the largest with 10,000 people, the smaller with a few hundreds." The inhabitants, who are nearly all agriculturists, are very largely immigrants from the neighboring Chinese provinces. Their condition is more comfortable than that of any other Asiatic people. They live "to a great extent, on their own small properties. The taxation is probably the lightest in the world. Food, fuel, and clothing, though coarse, are abundant." The northern part of the country nearest to the Russian boundary is still very sparsely settled. It has the rich soil, however, which characterizes the rest of the Mantchurian plain, and it will apparently not be long before it is filled with an industrious population. The principal industry of Mukden, a city of 300,000 inhabitants, is tanning. An excellent map accompanies this unusually interesting and suggestive paper, which closes with a brief sketch of the history of Mantchuria.

—Mr. G. W. Smalley signalizes his change of status from American correspondent in England to English correspondent in America by reprinting another collection of letters written to the *Tribune*, together with an account of his interview with Bismarck, first published in the *Fortnightly Review*. He names the volume 'Studies of Men' (Harpers). It consists of sketches and appreciations of twenty-five prominent contemporaries, mostly English, concerning whom not much information is easily accessible to the mass of readers, and it is therefore likely to enjoy a wide popularity, especially as it is written in an easy, flowing style, and abounds in gossip and anecdote. Particularly interesting are the articles on Lord Bowen, Tyndall, Jowett, and Froude. But although the book has many elements of popular success, and is above the level of even the better class of newspaper work, it will hardly gain recognition as a genuine contribution to literature. It has the distinctly pronounced ephemeral character that marks even the most finished productions of journalism, and it is not free from the minor blemishes which Thackeray satirized in his pictures of "Our Own Correspondent." Mr. Smalley delights to let his readers know on what terms of intimacy he is with the great ones of the earth, and abounds in such phrases as "One of the foremost men in English public life told me," etc., or, "I used sometimes to say to Tyndall"; at other times he patronizes them with the most charming condescension, as when he says: "There are points in which one would have liked Tennyson to be other than he was; so are there in all men." He is oracular and omniscient, but occasionally confesses his inability to resolve a knotty question, as when he candidly remarks: "But is it absolutely certain that the Emperor William Second is a Napoleon? Is he even a Frederick? He may be both; but how is one to know?" As a general thing, however, he has the courage of his opinions, as when he decides that "Froude was something more than the most accomplished prose-writer of his time." On points of etiquette he is great.

McMASTER'S HISTORY.—I.

A History of the People of the United States, from the Revolution to the Civil War. By John Bach McMaster. Vol. IV. D. Appleton & Co. 1895. Pp. xiv, 630. Maps.

THE fourth volume of this well-known work begins with the repeal of the British Orders in Council—a tardy measure in the hope of preventing war—and ends with the admission of Missouri into the Union in 1821. The war of 1812, problems of the Southern territory and national boundaries, the development of the Western country, and the efforts of Congress to control or direct the expanding energies of the people, offer Mr. McMaster a wide field for the exercise of his characteristic research and powers of description. In smoothly flowing periods he recounts the events of war and politics, almost quieting criticism by his ability to collect and arrange facts, and lulling the reader into over-confidence by his relation of incident and his judgments of social movements. It is impossible to agree with him in all matters, and his work suffers when compared with that of Mr. Henry Adams, whose 'History' covers a part of the same period. There is a lack of connection in Mr. McMaster's work which leaves the impression of his having failed to grasp the full relation of the national events he describes.

The war of 1812 offers few points of interest, as it is a record of official incompetency and individual error, which blundered into rather than won a peace. Very few of those in power

knew exactly why hostilities were declared, and certainly Madison was ignorant of the cause, or, what was worse, interested in maintaining a fiction of his own creating. Entering into an offensive war, without preparation other than an excess of proclamation, it required a long series of disasters to teach the prudence and the necessity of securing peace. If Madison was in error, his agents were incompetent. As at the beginning of the Revolution, a number of men who had seen service in a former war were appointed to command the motley collection of troops constituting the army; and, as in the Revolution, experience proved how injudicious, almost fatal, such a standard for selection was. Too old to be energetic, and too jealous and independent to act in concert on a definite plan of campaign, these superannuated leaders blundered, surrendered, or fled, and set an example their followers were only too willing to imitate. The memory of the severe lessons taught by the Revolution had passed away. Militia, enlisted for a short term, was believed to constitute an army, and the strongest element in this fluctuating body was the lawless and unrestrainable volunteers from Kentucky and Tennessee, where the war spirit burned most fiercely. What could be expected of a force engaged to serve till "after a battle"? What could be looked for from a commander whose sole recommendation had been a slight service nearly forty years before, and some political activity in the interval? The confidence with which the war was undertaken contrasts painfully with the results attained at great cost; but the experience was wholesome both in internal matters and in external relations.

Mr. McMaster could not pass by the stupid and often cowardly conduct of individual incursions, for it would be absurd to speak of campaigns where the intentions of each general seemed rather to neutralize the efforts of his fellow-general than to utilize their aid. It is a dreary record of error. Hull, Van Rensselaer, Smyth, Dearborn, and Wilkinson, not one of whom can command sympathy, pass by in the melodrama, and leave Harrison and Jackson to win political preferment on the strength of some very dubious military achievements. The inefficiency of the land force was offset by the brilliant record of the naval force on the lakes and the ocean. Too much praise is given to Perry's victory on Lake Erie, for he was nearly defeated by the conduct of Elliot, his second in command; and much more could have been said of the failure of the military features of the war. The hearts of the people were not in the contest, and New England was in almost open opposition. As an opportunity to work off the ferment of agitation in the new States of the West, the war is interesting, for there is no telling what form of internal dissension might otherwise have been provoked. The spirited efforts after the sacking of Washington to construct fortifications on the coast contrasted strongly with the general apathy of the people in organizing active resistance. It was a pretty enthusiasm that led all trades and occupations to go to the trenches, or sail up the Hudson to work at the new earthworks in picnic form; but it never passed beyond the stage of prettiness. An English army, by no means formidable, could march without meeting any resistance into the heart of a country supporting a million and a half whites, plunder and destroy at will, burn the Capitol, remain nearly five weeks on shore, and retire at leisure without encountering so much as a check. National impotency could hardly be more clearly demonstrated. The war proved the possession of true naval power; it also proved as true an incapacity to conduct operations on land, and it made many political reputations which the country might better have been spared.

If ever a wholesome lesson was dearly learned, it was this realization that a policy of foreign connection and entanglement was destructive of internal peace and development. For a quarter of a century the partisans of France in the United States were set against the favorers of Great Britain, and the war of 1812 only marked the extreme use of a victory of one faction over the other. The cost through embargoes and depredations on commerce was enormous and unmeasured. It led the country to the verge of a division into two separate nations, for sectional feeling was intensified. The war policy failed dismally at the North; and in the South it fostered a spirit of conquest and unwarranted aggression, with all the vulgar glitter and accompaniments of cruelty and greed to tarnish the repute of victory. It is easy to admire Decatur forcing the Barbary States to recognize rules of justice; but it is impossible to applaud Harrison and Jackson in their severe punishment of Indians —guilty of murder, it is true, but guilty under the strongest provocation and sense of injustice.

Civil matters were also passing through a crisis. Government was bankrupt; Gallatin, the ablest manager of its finances, and the least of a shifty and speculative "financier," had laid down his office, and left it to his successors to restore solvency by means doubly questionable in their neglect of public faith. Political parties reflected the chaotic condition of national affairs. The "Gerrymander" in Massachusetts and New Jersey, and the rise of unscrupulous managers of party, supported in influence mainly by office, and seeking to bend State and Federal Government to their own purposes, led to intrigues which were responsible for the incapacity to provide the means to meet emergencies, such as defence of territory, or to take action upon questions of public policy. The Republicanism of 1816 differed little from the Federalism of 1798; and this reversal of party is so concisely told by Mr. McMaster as to give little impression of the magnitude of the change. The measures which had defeated John Adams and the Federalists now became the mainstay of the Republican party, but with a difference: the popular influences which had been dreaded by Jefferson and his followers became more active than ever, and added one more element of danger to the welfare of the people.

In any history of the people of the United States their experiments in banking and tariff legislation would naturally play a leading part. Mr. McMaster devotes three chapters to these subjects, and they will repay a careful study. The refusal to renew the charter of the National Bank, which expired in 1811, created an opening for State banks, incorporated under laws so lax as to give no check to fraud or over-issues of notes. The desire to obtain charters for these too irresponsible institutions led to offers of certain financial advantages to the State, and could hardly have ended with that legitimate return for a valuable franchise. The men who passed the acts of incorporation were human and open to "influences"; and it is impossible to believe that legislators were not corrupted. No State escaped the infection of "wild-cat" banking; but it was in the West and South that the greatest abuses existed. The war only increased the dangers by giving an excuse for suspension of specie payments by the banks throughout the country, and by encouraging the expansion of issues and the circulation of paper down even to the copper money of the day. Mr. McMaster tells us much of the practices of banks and other companies, of the issues of individuals and counterfeiters, of the bold trickery and barefaced dishonesty of those who were bent upon gulling the community with their "rag money"; but so much is not said of the effect on prices, of the widespread ruin caused by the uncertainties of all values, of the lowering of public as well as private morality by the temptations to defraud, and of the spirit of gambling and general speculation introduced into every line of trade and industry. It is not too much to say that the action of members of Congress in voting increased compensation for themselves was due to this element of corruption. The vast movement of population from the older States to the westward was greatly stimulated by the disturbances introduced through financial disorder and interruption of trade. The sharper was fostered and encouraged at the expense of the honest, and even the sense of honor was sapped, for the banks refused to resume of their own accord, and had to be compelled to that act of common honesty. While the bubble of paper money existed, there was apparently great prosperity and boldness in undertaking new schemes. It was only when the day of reckoning came that the hollowness was realized.

FAST AND THANKSGIVING IN NEW ENGLAND.

The Fast and Thanksgiving Days of New England. By W. DeLoss Love, Jr., Ph.D. Boston: Houghton, Mifflin & Co. 1895. Pp. vii, 607.

THIS handsome volume from the Riverside Press deserves the hearty recognition of students of New England history. With a breadth of treatment scarcely indicated by its title, the writer has examined the Puritan attitude towards days of religious observance, and has traced the development of American fasts and thanksgivings with much picturesqueness of detail and great antiquarian learning, setting forth the relation of these appointments to the more significant vicissitudes of colonial and national life, the firm persuasion of immediate dependence on divine providence from which they sprang, and the political animosities which occasionally appeared in their designation.

Dr. Love shows that the number of holidays established in England before the Reformation led to their lax observance by the people, while customs tolerated at the greater ecclesiastical festivals robbed them of much of their spiritual significance. The Tudor sovereigns limited the number of these days, and diminished the strenuousness of statutory requirement as to the observance of such as remained; but neither governmental nor popular thought made much distinction in sacredness between Sunday and other holidays, and all such seasons were alike marked by boisterous sports and general laxity. It was to rescue Sunday from what they deemed misuse that the early Puritans rejected the observance of other sacred times. Yet, though the Puritans always set their faces against saints' days, at the beginning of Elizabeth's reign the leaders of the party, especially those who had come under the influence of the Swiss reformer, Bullinger, would gladly have commemorated the principal events in the life of Christ, and a proposition to limit English

churchly holidays to these "feasts of Christ" failed of approval in the Convocation of 1562 by only a single vote. The Anglican insistence on much of the ancient calendar, and the radical influence of the Genevan school, soon led the Puritans and Separatists to reject all regularly recurrent days except Sunday. This was the attitude of the founders of New England.

Yet, though opposing recurrent seasons of religious observance believed by them to be of human appointment, no men of their age were more ready to find the hand of God in the adverse or propitious circumstances of their private and corporate life, and none insisted so strenuously—though all religious parties did so to some extent—that special successes or hindrances demanded particular recognition. Hence the founders of New England brought with them the occasional, non-recurrent thanksgiving and fast; and they looked upon these days as primarily of churchly appointment, though intimacy of connection between church and state speedily led to the designation of such seasons by civil authority. This governmental designation ultimately brought about the transformation, save in rare instances, of the occasional thanksgivings and fasts for special causes, into annually recurring days of civil appointment such as the earliest Puritans would have rejected.

Dr. Love thus points out that the annual fast and thanksgiving, having primary reference to the harvest and to general blessings, so characteristic of New England life, involve an essential modification of the original New England conception. This departure was made early in colonial life. The famous harvest feast of 1621 had no religious character, and was not a thanksgiving in the sense in which early New England understood such a day, however unconsciously it may have foreshadowed the practice of this century; but the annual thanksgiving had become the usage of the Plymouth church by 1636. As a regularly recurrent after-harvest day of governmental designation, however, the thanksgiving first appears to have established itself in Connecticut, and about 1649. In Massachusetts the annual appointment was a decade later in obtaining similar fixity. The yearly spring fast of civil designation likewise first took root in Connecticut—in Dr. Love's opinion not far from 1659—but was resisted in Massachusetts till about 1694. Regarding it Dr. Love declares: "It is altogether certain that it is a day which, even at its best estate, the colonial fathers, in their intelligence and piety as Puritans, would not have tolerated."

The author's summary of the history of these seasons is worth quoting at length:

"It may be said, in a general view, that the fast and thanksgiving days of Massachusetts have passed through three periods to their present development. The observance which the forefathers brought from old England was religious, having its motive in the doctrine of Divine Providence, and this was maintained with vigor down to the establishment of the provincial government. With the adoption of the system of annual appointments, particularly as to the fast days, came in an observance having its affiliations with the season of the year the events of which it chronicled, and this was characteristic through the Revolution. After the organization of the federal government, the observance—though retaining the semblance of the first period and operating through the system of the second—was infused with the political spirit, which has been, on the whole, dominant in it to the present time. The fast day especially may be characterized as successively religious, historical, and political."

Dr. Love shows incidentally that the colony of New Netherland had its occasional fasts and thanksgivings of civil appointment, in addition to a considerable observance of the churchly holidays, conforming in this respect to the practice of the Dutch home land; but that no annual thanksgivings existed under the rule of the Dutch or of their English successors. Similar occasional days, due to English example, were observed in the colonies to the southward, though the custom nowhere developed into the spring and autumn holidays characteristic of New England. This widespread recognition of the propriety of special fasts and thanksgivings led the Continental Congress to recommend days of both descriptions as the exigencies of the Revolutionary struggle seemed to suggest. The same usage was continued by Washington and Congress after the establishment of the Federal Government, a national thanksgiving being held in 1789; and another, by recommendation of Washington, without Congressional action, in 1795. Between the latter date and 1815, when Congress and Madison recommended a thanksgiving for the end of the war with Great Britain, five national fasts were designated. Again in 1841, on account of the death of President Harrison, and in 1849, by reason of the cholera, special national fasts were proclaimed. The civil war was prolific on both sides with fasts and thanksgivings for special occasions. And, as recently as 1876, by appointment of President Grant, the centennial anniversary of the Declaration of Independence was designated a special thanksgiving for the blessings of the first century of national existence.

Since the beginning of the present century the later form of the New England thanksgiving—the annual autumn festival—has won its way rapidly outside the region of its origin. Such a day has been appointed in New York since 1817, and other commonwealths so embraced the observance that by 1858 all but six of the States had adopted it. It was therefore a natural development that led President Lincoln to nationalize the custom by appointing a thanksgiving of this character in 1863. Dr. Love draws the conclusion that "the present national custom may be said to be the appointment of an annual harvest thanksgiving, and such special fast or thanksgiving days as the circumstances of sorrow or joy may seem to warrant."

If the yearly thanksgiving of New England has thus grown into national acceptance, it has been otherwise with the annual fast. Begun as a religious observance, it has had an unlike fate in the two States where it earliest appeared. In Connecticut the desire that Episcopalians should not be annoyed by the appointment of a fast in the week succeeding Easter led Gov. Huntington, himself a Congregationalist, to set the day on Good Friday in 1795—a custom that has continued unbroken from 1797 to the present. This alteration of time has gradually modified the spring fast in Connecticut, so that it is now largely observed by the churches as a memorial of Christ's passion. In Massachusetts, on the other hand, its religious significance well-nigh disappeared, until the efforts of Govs. Russell and Greenhalge, with those of religious and historical societies, resulted in its abolition in 1894, and the substitution of the Nineteenth of April as a spring holiday without claim to religious observance. Maine, New Hampshire, and Vermont still follow the ancient custom; but, in Dr. Love's opinion, their "future action would seem to be reduced to a choice between the example of Connecticut or Massachusetts."

In reviewing the main argument of Dr. Love's volume, we have passed by much of interesting detail which his studies present—an example of which is his account of the attempt of those in authority under the Andros Government to force upon unwilling New England a day of humiliation on the anniversary of the beheading of Charles I. Such an episode throws a flash of light upon one of the causes of the unpopularity of that régime. But we cannot omit to mention the calendar of more than seventeen hundred fasts and thanksgivings observed between 1620 and 1815, or the careful bibliography of six hundred and twenty-two sermons delivered on such occasions before 1816. What labor such a catalogue of days involves is best understood when it is remembered that they are only scantily noted in early legislative journals, so that, as Dr. Love declares, there are "more outside of the Colonial Records than in them." Of the six earliest Massachusetts proclamations known to Dr. Love to survive in their original printed form, only one is mentioned in the records of the Colonial Government. These early broadsides afford the author the theme for an interesting chapter, and photogravure reproductions of the three most venerable survivors of the broadside proclamations of Massachusetts and Connecticut fittingly embellish this serious and well-nigh exhaustive study of one of the most characteristic of New England customs.

Life and Times of Major-General Sir Isaac Brock, K.B. By D. B. Read, Q.C., author of 'Life and Times of Governor Simcoe,' etc. Toronto: William Briggs. 1894. Illustrated. Pp. viii, 266.

Canadians, or some of them, have worked themselves into the belief that they are living "under the gigantic shadow of a rapacious neighbor," and that plots are always on foot for their annexation. This, they fancied, was the object of the McKinley Act. The suspicion, it is needless to say, was baseless. In the McKinley debates slight reference was made to the Canadian question, nor had the framers any object but protection. Canada, however, was severely pinched by exclusion from the American market, and the consequence was that a wave of the sentiment which its enemies call Annexationist and its friends Unionist passed over the border counties and swept more widely the Province of Quebec. The movement, if anything wholly devoid of organization can be so called, was the result of commercial pressure, but could not have been produced by that alone without general affinities and attractions. Commercial pressure would not produce a movement in Denmark for union with Germany, or in Holland for union with France. On the other hand, partly as a reaction against the annexationist movement, partly in response to the appeals of Imperial Federationists, there has been a lively manifestation of loyal and imperial sentiment. Stirring appeals have been addressed by the Tory Government of Canada, in elections, to anti-American feeling, and strenuous efforts have been made by celebrations of military anniversaries, the erection of monuments on battle-fields, and martial parades of the school-children, to revive the memories of 1812 and all memories adverse to closer relations with the American republic. The Life of Sir Isaac Brock, the Canadian (or, rather, British) hero of 1812, which lies before us, seems, in spite of Mr. Read's humane and polite disclaimers, to be instinct with the spirit of the hour, and to satisfy the requirements of Canadian patriots better than those of a student of history.

However strongly convinced Americans may be of the righteousness of the War of 1812 as a revolt against British Orders in Council and impressment, there are few of us who will not acknowledge that, as an attempt to conquer Canada, which was its most attractive aspect in the eye of Clay and the War-Hawks, it was not only a military failure, but a political mistake, and retarded instead of hastening the step of manifest destiny. Canada was unhappily founded in enmity to the United States. Had the wise and noble counsels of Greene and Hamilton prevailed, and amnesty been extended to the vanquished in the Revolutionary war, Great Britain would probably have withdrawn from this continent, as her best advisers desired she should, and Canada would have been in the Union. However, before 1812 the enmity had abated. Americans had been settling on the northern side of the line; commercial interests and social affinities had been drawing Canada towards her own continent; and the attraction, had it been left to work, would have gained strength with time, and might have brought about a peaceful union. Canadians had little interest in the quarrel about Orders in Council and impressment. How unwilling they were to go to war with their kinsmen on the south of the line appears from the despatches of Prevost and Brock cited by Mr. Henry Adams in his History (vol. vi., pp. 318, 319). Those despatches complain of "the little dependence to be placed upon the militia or upon the active exertions of any considerable proportion of the population of the country"; of "a lukewarm and temporizing spirit, evidently dictated either by the apprehension or the wish that the enemy may soon be in possession of the country"; of the refusal of the militia to march, and of "a disposition to tame submission" not confined to the militia. But invasion roused the spirit of a brave and hardy population. The Canadians fought gallantly by the side of the British troops, and, by the bloody and protracted struggle which ensued, not only was the growing tendency to reunion wrecked, but in its place a hatred was implanted which three generations have hardly sufficed to uproot.

The military history of the war is intelligible enough. Raw American troops under inexperienced commanders attempted to act on the offensive against British veterans commanded by one of the best officers in the British service, and this in a country which was then thickly wooded and presented special difficulties to the invader. The natural result was a series of disasters during the early period of the war. Before its close the Americans learnt their lesson, and the balance of victory began to turn. At Chippewa a battalion of British regulars was overthrown. Lundy's Lane, the last engagement of the war, was also the bloodiest—a bloodier action, in fact, in proportion to the numbers engaged, has scarcely been fought in any war; and though the Americans retreated and their operation failed, the same stubborn valor was shown upon both sides. At Queenston Heights, the scene of Brock's victory and of his heroic death, neither the American General Van Rensselaer nor the regular force under his command appears in any way to have failed. They had almost grasped the victory. But the raw militia refused to pass the river in their support, overcome (it seems) by the sight of the wounded, who had been brought across to them as the engagement went on. The operation of physical law is hardly more certain than the ascendancy of discipline in war.

Mr. Read's materials are scanty, and, saving some details of the capture of Detroit and the battle of Queenston Heights, there is nothing new to interest us in his work. He has little to tell us of his hero. It is certain, however, that Brock was a great soldier and a very noble man. His courage was shown when he was a subaltern, in an encounter with a noted duellist, the bully of the regiment, whom he quelled by challenging him to fight across a handkerchief. But he seems to have had also the highest qualities of the commander, and to have wanted, in order to attain a splendid name, only an ampler field. He is fortunate in having had erected to his memory about the finest monument on this continent, and upon a site worthy of its beauty. But Mr. Read's description of this monument passes our comprehension. He calls it an "obelisk," and says that its style is "the simplest and purest Egyptian," and that "the proportions of the obelisk known as Cleopatra's Needle have been strictly adhered to." The monument is no obelisk, but a fluted column, with a Corinthian capital surmounted by the statue of Brock. It has nothing Egyptian about it, and, be the proportions what they may, is no more like Cleopatra's Needle than it is like the pyramid of Cheops. The grass has long grown over the graves in the battle-field which that monument overlooks; and perhaps its pediment may some day bear an inscription in which a tribute of honor to the brave men who fell on both sides will be blended with words of international reconciliation.

A Handbook of Systematic Botany. By Dr. E. Warming, Professor in the University at Copenhagen. Translated and edited by M. C. Potter, M.A., F.L.S. Macmillan & Co. 1895. 8vo, pp. 620.

Classification in natural history endeavors at the present day to exhibit kinships. This endeavor is justified by the modern and generally accepted view taken of species. Species, the units in all classification of living things and of things that have lived, are now believed to have been derived from preëxistent species in much the same fashion in which younger and smaller branches spring from older ones. Since the revolution in thought by which this belief became incorporated into all our science primers, it is difficult to understand how naturalists could have ever held any other view. And yet it was scarcely forty years ago that the revolution fairly began. Up to that time, naturalists, with very few exceptions, spoke of species as "fixed," and as varying only within narrow limits. The absurdity of describing unvarying species as related appears to have struck many students of animals and plants, and to have forced from them, from time to time, apologetic and explanatory utterances. To make this absurdity apparent at the present day, let us suppose ourselves in a toy-shop well filled with the different types of playthings. The Noah's arks would constitute one species, the yachts another, and the steamers still a third, all coming, perhaps, under the general head or genus of boats. These different crafts would be related to one another solely by the end or purpose of construction, and this would, of course, in the last analysis, go back to the idea in the mind of the artisan who conceived and made them. Classification of the boats would deal either with shape as expressive of fitness, or with the idea behind both shape and fitness. The classification could not represent anything like kinship, for kinship involves the conception of common descent.

Unvarying species were believed to have come down to us in parallel lines out of the past, and hence all expressions denoting relationship were mere figures of speech. And yet, incredible as it may appear, the so-called relationships indicated by the leading systematic botanists who worked on the hypothesis of the fixity of species turned out to be, in very many cases, perfectly satisfactory to the systematists who adopt the hypothesis of descent or derivation. In the great majority of instances, the systematists holding the first hypothesis had, by keen insight, gone below the superficial characters, and selected as a basis for their classification the deep characters which, in the language of the second hypothesis, are only slowly affected from generation to generation.

Every serious attempt to represent kinship under the modern view is to be treated with consideration. The modern systematist does not usually have within reach any positive historical evidence of descent. He has just about the same material at his command which was at the disposal of his predecessors, so far as the flowering plants are concerned, but he is now in possession of a vast recent accumulation of facts respecting the lower or flowerless plants. If we take the work of Professor Warming as an illustration, we shall see first the comparatively slight changes which have been made in the arrangement of the flowering plants. In general, the system suggested by the late Prof. Eichler is followed to a moderate extent. The plants having their flowers on the plan of five (the Dicotyledons), are divided into two groups —the Choripetalæ, possessing separate petals or no petals at all; and the Sympetalæ, those which have united petals. Under this arrangement, there are some curious juxtapositions. For instance, the Knotweeds, the Peppers, and the Pinks occupy successive pages; Spurges, Rue, Horse-chestnut, and Maple come close together, and so on. But all this flows from a proper disregard of a very obvious superficial character which used to cut through the Natural Orders without exciting much comment, namely, the presence of separate petals or the absence of petals. Wood-Anemone was not thrust out of the Crowfoot family just because it has no petals; it is only one of many cases which have called for a rearrangement of the groups of the families themselves. The Sympetalæ are believed to be later in their origin than the other flowering plants. Of the Sympetalæ, the Compositæ are very naturally placed at the head.

After all, that which will most surprise the reader who has not kept pace with the results of modern study of Botany is the completeness with which the kinship of the lower and the higher plants is now made out. There is hardly a break in the long line of evidence, and even these gaps are being from time to time filled up. The old dividing wall between the flowerless and the flowering plants is broken through, and the terms which are applied to the reproductive organs of the former are now applied also to the latter, whereas it was formerly just the other way. There is no saying how soon we must finally substitute in our primers of botany the word microspore for pollen-grain, and megaspore, or macrospore, for ovule; but, jesting aside, it seems as if the time could not be very far away.

Although there is much in Prof. Warming's work which cannot meet the entire approval of every botanist, it may be heartily recommended to the general reader who wishes to see for himself how far the revolution in the recognition of kinship has gone. The useful

products of plants and the manifold peculiarities of the more curious plants are charmingly dealt with, and, under the careful hand of the translator, who has been a thorough editor as well, the mistakes are few and unimportant. It would be ungracious to call attention to the trivial errors.

Out of the East. By Lafcadio Hearn. Boston: Houghton, Mifflin & Co.

THIS latest contribution in book form to the solution of the problem of Japanese psychology, by Mr. Hearn, comes labelled under a quotation, with the sub-title, "Reveries and Studies in New Japan." The author, a man of remarkable mental inheritance through a mixture of blood and races, has made himself a sort of revolving photographic camera. Even to the ordinary traveller, a new world like that of Japan beyond the seaports strikes upon mind and sense like the emanations from a new sun. But to a student of Mr. Hearn's mental make-up the waves of light are, so to speak, vastly multiplied. Where the ordinary man sees, as it were, impressions through yellow glass, this author keeps his sensitized plates in the violet ray. Yet because of the very fact that his mind employs mostly but one end of the spectrum, he is apt to ignore the gamut of color and fail to see things in true white light. It is manifest, from our point of view at least, that there is a vast element of exaggeration in Mr. Hearn's fascinating description and philosophy.

Concerning his papers, numbering a dozen lacking one, mostly reprinted from the *Atlantic Monthly*, it is difficult to draw the line between those which are "reveries" and those which are "studies." He tells again the old Rip Van Winkle story, which in Japan exists in both the marine and the terrestrial form. The one selected is that of the fisher-boy, who goes beneath the sparkling waves to spend a delightful little eternity where suns do not rise and set, and where time—that element which so disturbs the calculating Westerner—is no more. From the ocean's daughters of fairy-tale the author turns to "The Eternal Feminine," to show how utterly absent from the decent and orderly side of Japanese life romantic love is, and how Confucianism, with the power of its disguised savagery, has made woman only a cog in the great driving-wheel of society. Throughout his writing, the author protests against the conclusions of scholars and the unchallengeable testimony of the language. He would have us believe that although personality is absent from speech and literature, there is a subtler and keener sense of individuality, and a finer strength of personality, in the Japanese than the Anglo-Saxon man or woman knows; yet the author's success is not noticeably visible. With all the wealth of his marvellous vocabulary, his artistic phrase, and the prismatics of fascinating philosophy, he would have us enjoy the dreamy haze of Buddhism in place of a clear perception and belief in one God, personal, real, distinct from his creation, yet in it. Even the very keenness of his sympathies with the Japanese mind helps to show us what a very thin and wavering line divides the real from the unreal, mythology from history, a stone idol from the being which it is supposed to represent. The papers in this volume make it still more easy to understand just how and why it is that Japanese gentlemen, educated in the physical sciences and in the technical processes of modern trades and machines, can still talk and write about the dragon-born Jimmu Tenno as "the first Emperor of Japan, who ascended the throne of Japan twenty-five hundred years ago." It explains clearly how even yet the overwhelming majority of Japanese believe that their Amazonian queen "conquered" Korea over sixteen hundred years ago and "made it tributary to Japan." Indeed, Mr. Hearn's latest book serves an excellent purpose in exhibiting Japanese Jingoism and the determined purpose of the military classes to retard education and keep appropriations for schools down to the lowest point, while millions are squandered on armaments and militarism is systematically nourished.

On the whole, the ablest chapter of the book is that entitled "Jiujutsu." This term, which superficial foreign observers translate "wrestling," is, in reality, the verbal exponent of a remarkable system of self-defence by apparent surrender to the one attacking. The writer, on first seeing a performance of jiujutsu, was, without being able to understand the rationale of the proceeding, impressed with the fact that the most eager and muscular young men did most quickly get the worst of their bout. A thin and rather delicate looking professor of the art very quickly "laid out" a dozen or so stalwart and rosy-cheeked youth, though in each case it seemed at first as though the master was getting mauled to death or at least to helplessness. By profoundly skilful reasoning and great felicity of statement, Mr. Hearn shows that, when awakened Japan found herself in the grip of European giants with muscles which were treaties and hands that were ships and cannon, with every power of offence in consular courts, Western insolence, and race hatred, she deliberately planned a game of jiujutsu on a national scale. She yielded again and again. She confounded all those sanguine folk who expected immediate adoption of Western dress, manners, food, and ideals. She caused woful disappointment to the men who preached, prophesied, and wrote pamphlets on "the immediate Christianization of Japan." Yet, while quietly yielding, Japan studied, thought, digested, assimilated, rejected. Now, in 1895, the whole world recognizes with astonishment and admiration that *Japan has won in her game of jiujutsu.*

Essays on Scandinavian Literature. By Hjalmar Hjorth Boyesen. Charles Scribner's Sons. 1895.

THIS is not an attempt at a connected exposition of Scandinavian literature, but a series of studies of some of its separate phases among the nations that once formed the triple kingdom. Three of the essays, those on Björnson, Kielland, and Jonas Lie, are given to Norway; three others, on Hans Christian Andersen, on Contemporary Danish Literature, and Georg Brandes, represent Denmark; one alone, that on Tegnér, in some ways the most interesting of all, stands for Sweden. Ibsen, conspicuous by his absence, it will be remembered has been made the subject of a separate volume previously published.

To the essay on Björnson has been appropriately given not only the first place in the book, but more than a third of the whole number of pages. The author confesses to heroic condensation, but it is a matter for regret that, with the wealth of material on hand, his pen should not have been allowed to follow its natural tendency, since there is no book in English on Björnson. To write another essay on this Titan of the North requires no little courage, but this has materially rounded out our picture of him as he is, and we are made to realize, if we have not appreciated it before, the extraordinary part he has played. Few men in all history have exercised a greater influence upon a nation's intellectual development than has Björnson upon that of Norway. It has been everywhere paramount; not only in religion, where he has acted the part of liberator, or in politics, where, although holding no office, he has been the soul of the national movement, but in literature in all its manifestations—in journalism, in the drama, in lyric poetry, and in the novel as well. Björnson in all this is not merely a Norwegian, he is Norway. "To mention him," says Brandes, elsewhere quoted, "is like running up the Norwegian flag."

Even more interesting than the initial essay to the American reader will doubtless be that on Hans Christian Andersen, not only on account of the unique position of this writer in English literature, where he is felt to be almost a native element, but because of the wholly sympathetic way in which he is treated. The author has given us again a personal picture unmistakable in its fidelity, and a critical estimate produced with a touch no less sure. He shows us how harmless was the vanity of this most childlike of men, and how unaffected his innocence and unworldliness, yet without shirking his idiosyncrasies or sparing his foibles—and that is the charm of the essay. We feel that we have at last got hold of the real Andersen, who, although a *rara avis* of most whimsical plumage, was a personality infinitely superior to the Andersen of the autobiography.

Of the other essays in the volume, that on Tegnér, the national poet of Sweden, whom we know as the author of 'Frithjof's Saga' and 'Children of the Lord's Supper,' has probably the most enduring interest, because of the thoroughness of treatment of a most picturesque subject. It is the only time in English, so far as we are aware, that Tegnér, who in his environment was a great poet, has been satisfactorily accounted for, and has had an intelligible place assigned him in European literature in and out of Sweden. Of the remainder, the essay on Jonas Lie, whom the author predicts that London and New York will before long have discovered as one of the foremost representatives of modern realism, is important because of the personal character of much of its material. Lie has been widely translated into the languages of Europe, which is proof positive, as such things go, of popularity abroad. His tales of the sea are the best that the North has produced, and the reality and modernity of this, as of much of his other work, are undoubted. Why he has not taken firmer root among us is not quite apparent, although the author ascribes it, in part, to inferior translations.

The other essays are short; that on Contemporary Danish Literature necessarily so to hold our interest, that on Alexander Kielland apparently only from choice. The least satisfactory of them all is the one on Brandes, not, however, for what has been said so much as for what has been left unsaid, for here is a writer of whom we know far too little in English. The author of the present volume does not unqualifiedly call him so, but Brandes is in many ways the first of living critics. He does, however, associate him with Lessing, Matthew Arnold, and Taine, with the last of whom, as is pointed out, there is no little intellectual kinship. As a critic Brandes has not only gained an international fame, but, more than that, in and out of Scandinavia has deeply influenced contemporary thought.

Many of his essays—our author notes particularly the one on Björnson—are superb pieces of critical writing, subtle, luminous in statement, striking in judgment, and replete with information. Unfortunately, in his unaffected sympathy with anarchism there is a devil lurking behind the door to discredit him at home and abroad, and he has failed of a recognition otherwise accorded him.

Prof. Boyesen has never written more clearly or convincingly than in the present essays. It is to be hoped that the future volume suggested in the preface will in good time be forthcoming.

The Rise and Development of Organic Chemistry. By Carl Schorlemmer, LL.D., F.R.S. Revised edition, edited by Arthur Smithells, B.Sc. Macmillan. 1894. Pp. xxvii, 280.

THE first edition of this book was published in 1879 and has been long out of print. A revision was undertaken by the author shortly before his death, and has been completed by Prof. Smithells, who prefaces the work with a short biographical sketch of Prof. Schorlemmer. Born at Darmstadt in 1832, Schorlemmer, at the age of twenty-one, was an apothecary's assistant at Heidelberg, where he came under the influence of Bunsen, whose lectures he attended in his spare time. Four years later, he decided to give up pharmacy, and, after a few months at Giessen under Will and Kopp, succeeded his friend and former schoolfellow Dittmar as private assistant to Prof. Roscoe at Owens College, Manchester. In 1861 he was appointed official assistant in the Owens College laboratory, and in 1874 the chair of Organic Chemistry was created for him—a position which he occupied until his death. His first important work resulted in deciding the vexed question concerning the identity or isomerism of the alcohol radicals and their hydrides, and had great influence on the development of organic chemistry. His experimental activity is indicated by the list of sixty scientific papers appended to this sketch of his life. The last fifteen years he devoted almost entirely to authorship. In 1874 his 'Organic Chemistry' was published in both English and German, and at once became a standard work. A little later he undertook with Roscoe the task of writing the now well-known 'Treatise on Chemistry,' the first volume of which appeared in 1877, and which is still incomplete. It is pleasant to know that Schorlemmer's faithful and fruitful service to Owens College for thirty-three years is to be recognized by the erection of the "Schorlemmer Laboratory" for organic chemistry by his pupils and admirers.

Organic chemistry is almost wholly a growth of the present century. At the close of the seventeenth century a division of natural substances into mineral, animal, and vegetable was recognized; and a hundred years later Lavoisier proved that vegetable bodies consisted chiefly of carbon, hydrogen, and oxygen, while those formed in the animal organism usually contained, besides these, nitrogen and sometimes phosphorus. The distinction between animal and vegetable substances soon after fell into disuse, and at the beginning of this century the present division of all substances into organic and inorganic was generally adopted. The organic substances known at this time were all of natural origin, and it was believed that they were formed in the plant or animal by the mysterious agency of the so-called vital force, and that, though capable of conversion into other compounds, none of them could be artificially produced from inorganic matter or from their elements. In 1828 Wöhler prepared urea from ammonium cyanate, and thus dealt a heavy blow at the doctrine of vital force. It soon appeared that ammonium cyanate could be made from its elements, and with this discovery the first synthesis of an organic compound was complete. In 1845 Kolbe effected a simple synthesis of acetic acid from the elements, and in 1859 Berthelot solved a problem which had long occupied chemists, viz., the direct combination of carbon and hydrogen, by obtaining acetylene, C_2H_2, by means of the electric arc between carbon poles in an atmosphere of hydrogen. The significance of these syntheses from the elements lies in the fact that, since it is possible to pass from one organic compound to any other by a series of appropriate reactions, all compounds whose constitution is known can now be built up from the elements. The history of organic chemistry is in a large measure a history of the development of hypotheses concerning the constitution of compounds into the present theory, to whose adequacy, as a working theory, at least, the wonderful growth and important practical applications of this branch of science bear witness.

The subject is presented in the book before us in a thoroughly lucid and readable manner. It is, as the editor says in his preface, a piece of work which discloses "at once the breadth and depth of his [the author's] knowledge, and his ardent and disinterested love of what he was wont to term, with the pride of a disciple, 'our science.'" The results and bearings of all the most important recent researches, such as those of Fischer on the sugars, Ladenburg on the alkaloids, Von Baeyer on indigo, are clearly and skilfully stated and discussed in a very suggestive manner. Chap. ix. deserves special praise for its complete and masterly discussion of the constitution of the aromatic compounds. At the close of his account of the brilliant achievements of synthetical chemistry, the author says:

"If to-day we still cannot make morphine, quinine, and similar bodies artificially, the time is near at hand. . . . If we cannot make quinine, we have already found a partial substitute in antipyrine, and its introduction has lowered the price of quinine. Another important problem is the synthesis of the ingredients of our daily food, such as sugar, gum, and starch. . . . That the synthesis of sugar is imminent has already been stated. But it is quite different with those important parts of our food which have been called the albuminous bodies."

It has been suggested "that if ever chemists should succeed in obtaining albuminous bodies artificially, it will be in the state of living protoplasm, perhaps in the form of those structureless beings which Häckel calls the Monera. All attempts hitherto made for the purpose of producing living matter artificially have failed. The enigma of life can only be solved by the synthesis of an albuminous compound."

The enormous number of substances now included under the head of organic chemistry may well dismay the student until he learns that progress in the knowledge of their constitution and their relations to each other has been even more rapid than the discovery of new compounds; so that, "in spite of the grand development of chemistry, nay, even for this reason, a survey becomes easier from day to day." The large chapters of former handbooks treating of coloring matters, bitter principles, indifferent compounds, and other bodies, which could not otherwise be arranged in the system, and which Gerhardt called "corps à sérier," become shorter and shorter, and will disappear in course of time.

Golf in America. By James P. Lee. Dodd, Mead & Co. 1895.

IN a modest preface Mr. Lee gives the formation of the United States Golf Association at the end of last year as the *raison d'être* of this manual. His main purpose in writing it was, doubtless, to record the constitution and by-laws of that association, and the conclusions arrived at by its officers in the important question of rules. And it is, in fact, a matter of interest to golfers to be informed, as they now are for the first time in an official manner, that the playing rules adopted by the association are the same as those of the St. Andrews Club of Scotland, with two modifications only, both of which are in the nature of improvements. But Mr. Lee has gone considerably further than this, and has produced an attractive volume which contains all that is really essential to the beginner in the way of book-learning. In these days, when all the young men and maidens who are not learning to ride a wheel are struggling with the mysteries of golf, a brief account of the best methods of meeting the initial difficulties and of making the ordinary shots cannot fail of a warm welcome. Of course the tyro must not expect to drive 200 yards at once as a result of reading this or any other manual. In all probability he never will drive that distance except in his happiest dreams. But Mr. Lee's advice, if carefully conned over from time to time after a day's practice in the field, will inevitably improve his game. The trouble with the literature of the game is that it tends to become too voluminous. A great number of books have appeared in recent years dealing with the history of the game in Europe, with the peculiarities of different links, and with the prowess of distinguished performers. Nothing remains to be said on these subjects, and we think Mr. Lee might have omitted his first thirty-two pages with advantage, and confined himself strictly to American golf.

BOOKS OF THE WEEK.

Arrowsmith, R. Seidel's Die Monate. American Book Co. 25 cents.
Bain, C. W. The Sixth Book of Homer's Odyssey. Boston: Ginn & Co. 40 cents.
Balzac, H de. The Wild Ass's Skin. London; Dent; New York: Macmillan. $1.50.
Barlow, Jane. Maureen's Fairing. Macmillan. 75 cents.

The Nation.

NEW YORK, THURSDAY, JUNE 27, 1895.

The Week.

THE sole interest felt by the general public in the meeting of the National League of Republican Clubs at Cleveland last week was as to the position which it would take on the silver question. Being the only national gathering of representatives of the party to occur before the meeting of the Presidential convention next summer, there was naturally much curiosity as to its attitude towards the burning issue of the day. President Tracy, in his opening address, dwelt upon the importance of the platform which the convention should adopt, characterizing the clubs as "the positive and active force of the last campaign," and declaring that "our conventions are the opening guns of every campaign." The convention lacked the courage to live up to this forecast of its duty. Committees, and sub-committees, and sub-sub-committees grappled with the matter of the platform for days. Free-coinage and sound-money resolutions were discussed for hours without action. Then the idea of an address to the people was suggested, which should "go for" the Democratic Administration, charge it with "incompetency and insincerity," and pronounce "every page of its history dark with failure." Finally, somebody pointed out that a section of the constitution of the League provides that it "shall not in any manner endeavor to influence the action of any national, State, county, or municipal convention," and proposed as the easiest way of escape from difficulties the adoption of a resolution reciting this clause, and referring all resolutions in relation to public questions to the Republican National Convention of 1896. Of course, this "dodges" the silver issue. It does so, too, in a most transparent way. This is the eighth year of the organization, and nobody ever before suggested that it had no right to express any views on public questions. On the contrary, it has always adopted a platform which covered the whole political field. Last year's convention of the Leaguers was held at Denver, and the committee on resolutions made a long report, one plank of which was devoted to the tariff and another to the silver question. Indeed, the adoption of a platform has always been regarded as a sort of necessity, to justify the coming together of delegates from all parts of the country. Nevertheless, the "dodge" is really a great victory for the cause of sound money. This becomes plain when we compare the refusal of this year's convention to say a word in favor of silver, with the plank adopted last summer at the demand of delegates from the silver States and with their hearty endorsement.

While the attitude of the Republicans towards the silver and tariff questions in their next national convention remains doubtful, one feature of the platform may be regarded as already settled. The sectional issue will for the first time be omitted, and no demand will be made for federal interference in State elections. The change that has come over the party in this respect is most striking. The federal election laws were repealed by the last Congress, and prominent Republican newspapers already admit that it was a fortunate thing for the country. No party organ was more emphatic and urgent in advocating force bills only a few years ago than the Indianapolis *Journal*, and yet it now confesses that it "is inclined to believe that, under the circumstances, the repeal of the so-called but unjustly called 'force bill' was judicious." Moreover, it declares that it "is not in favor at this time of reënacting the law, or of reviving the issue further than may be done by prosecuting an educational campaign and persistently urging the paramount duty and vital necessity of securing fair and honest elections." Comparatively few Republican newspapers have yet advanced far enough to admit that the action of the last Democratic Congress in this matter was commendable, but we do not know of one which any longer professes to lament the repeal of the obnoxious statutes. It will be an immense gain for the country to have this old sectional issue formally dropped.

One agency that is working quietly but effectively in favor of sound money at the South is the country press. National attention is attracted by the attitude of the most prominent daily newspapers, like the Louisville *Courier-Journal* in Kentucky, the Montgomery *Advertiser* in Alabama, and the Galveston *News* in Texas, but nobody learns except by accident of the instruction given their readers by the host of small weeklies published in every State. A recent issue of the Bainbridge (Ga.) *Democrat* contains seven editorial paragraphs and three articles devoted to the exposition of correct views on the silver question. This is not an exceptional case. The Atlanta *Journal* prints almost every day extracts from other country weeklies in Georgia that take the same position. Many of these rural editors put the case against free coinage with great force, and in just the way best suited to affect their readers. A recent analysis of the attitude of these local papers in Alabama showed that a decided majority were on the right side; and in other States as well, editors who have been on the fence are now coming out against the silver craze. No publications are read more carefully than these country weeklies, and when the bulk of them are on the sound-money side, it will not be long before the majority of the voters will be found there also.

The marked advance in the price of staple commodities cannot be explained upon the theory of the silver advocates. According to that theory, nothing can cause such an advance but an addition to the quantity of money. But there has been no such addition, and yet prices have materially advanced. Moreover, this advance accompanies a greatly increased business activity, which should also require much more money to carry it on. But, as there is no more money, according to the silver theory the demand for what exists ought to depress prices. It cannot be denied that if prices had declined below their recent low level, a state of desperation might have been occasioned in the minds of farmers, who always think a great deal more of the prices obtained for what they sell than of the prices they pay for what they buy. In their desperation they might have been led to favor silver money or fiat money. Fortunately this dangerous point has been passed, and the rise in prices means the decline of the cause of free-silver coinage.

The Trenton *Gazette* last week had a carefully prepared and able editorial on the way the pottery industry of the United States had been "hard hit by the Gorman tariff." It was very unpleasant for a paper so largely read by working potters to have to tell them such a disagreeable truth, and to remind them of the black outlook before them, but the conscientious editor must not shirk a plain duty. However, on the next page a news item tended somewhat to reassure the depressed potter. From it he learned that, as a consequence of being hard hit, his wages had been advanced 25 per cent. So unacquainted were he and his fellows with the nature and evidences of tariff ruin that they were reported to be "well satisfied," and disposed to regard the result of their negotiations with their employers as "one of the greatest victories" which they ever secured. Certain it is that McKinley never hit them in this way. He put the tariff up for them, but the employers made up for that by putting their wages down. In fact, an advance of wages at the Trenton potteries is something for which the oldest inhabitant can scarcely find a parallel. For many years, at least, whether the tariff went up or down, wages at Trenton have had but one course, and that was downward. The potters will be tempted to pray that some ignorant tariff-tinker may come along and hit them hard again.

Nothing is more remarkable about the many advances in wages reported from

all parts of the country, than the cheerfulness and spontaneity with which they are made by employers. The Commissioner of Labor, Mr. Wright, remarked on this fact some weeks ago, before it had attained anything like its present distinctness. It is safe to say that no other like period of our industrial history ever witnessed so many voluntary advances in wages. There have been some strikes and threatened strikes, but for the most part the change has come about through the simple announcement of employers that business had improved sufficiently to enable them to mark up wages 10, 20, 30 per cent. The disastrous effect of this state of things on the high-tariff reasoners is evident from their painful wriggling to explain it away. But it carries its lesson also to another class. What have the agitators and the socialists, with their bogey representation of the grasping capitalist, the iron law of wages, and social class arrayed against social class in deadly struggle—what have they to say about these unforced concessions of higher wages? Something must be wrong with the theory of soulless corporations and grinding employers, if so many of them are found glad to jump at the chance of giving their work-people a larger share of the profits of business. What possible labor legislation could secure for employees such advances in wages as have come to so many thousands of them during the past few weeks, purely under the operations of the laws of trade and through the interest of employers in the welfare of their workers? Agitators go to work the wrong way. They are like the income-taxers, who rail at the miserly millionaires at the very time the said misers are giving away for public uses vastly larger sums than could be wrung from them by any conceivable system of taxation.

The silly-season war with Spain over the Mora claim, which enterprising Washington correspondents had Secretary Olney waging a week ago, has already smoothed its wrinkled front. What the Secretary appears to have done is once more to urge Spain to pay a claim which her Government has repeatedly acknowledged to be just and has more than once promised to pay. Every new Secretary of State has done that for years. Secretary Fish began it, and all of his successors have taken their turn at it. Secretary Bayard in 1886 succeeded in getting a direct promise from the Spanish Government to pay $1,500,000, and the incident was then thought to be closed. But the Cortes have steadily refused to vote the money, and the Government has professed itself helpless. Mr. Blaine sent some very urgent instructions on the subject to Minister Palmer, in 1888, calculated to bring the Spaniards to time. But Mr. Palmer, our Minister to Spain, politely and "unofficially" pointed out to Mr. Blaine several egregious blunders in his letter of instructions, which he had used his discretion not to act upon at once, and which appears never to have been acted upon, as Mr. Blaine lost all interest in the case from that day on, so far as the published correspondence shows. Mr. Foster took the matter up, and so did Mr. Gresham, but neither of them was able to make any headway with the polite but stolid Spaniard. Secretary Olney may have better luck, owing to the Cuban revolution and Spain's especial desire at this time to be on the best of terms with this country. Superficially, the case is not unlike that of our own Congress scornfully refusing to pay the $425,000 Bering Sea damages which our Government had promised; but there is the added exasperation of ten years' delay on the part of Spain, and of the fact that any ministry could no doubt force the Cortes to vote the money if they were in earnest about it.

Secretary Olney has rendered a service to good morals and the cause of peace by defining the duties of citizens towards foreign powers with which we are at peace. The letter was written in answer to a request for information addressed to the Department of State by the cashier of a bank in Texas, who wanted to know whether there was any law against the bank's becoming the depositary of funds subscribed for aid to the cause of Cuban independence, and also what were the duties of American citizens in the premises from a moral point of view. The Secretary's reply is that there is no adjudicated case and no particular law touching the duties of bankers in receiving money known to be intended for the promotion of insurrection in foreign countries, but that the general duties of citizens toward nations with which we are at peace have been judicially declared by the Supreme Court. Those duties are that the citizen is bound to be at war with any country that the Government is at war with, and is equally bound to be at peace with any country that the Government is at peace with. This principle, says the court, "lies at the foundation of all government, as there could be no social order or peaceful relations between the citizens of different countries without it." There could not be a sounder maxim. When a rebellion becomes so important that the Government of another nation accords to it belligerent rights, a new set of rules comes into play. These are very strictly defined by law, but they need not be now considered, since belligerency has not been conceded to the Cuban rebels. There is always a lot of uneasy and adventurous spirits "who breathe short-winded accents of new broils," and are always spoiling for a fight in Cuba, Mexico, Central America, or some other place. None of this class will be deterred by any views that may be entertained by Secretary Olney or by the Supreme Court, but sober-minded and responsible citizens, like the cashier of the Waco bank, will everywhere be glad that a clear and authoritative rule of action touching their duties has been laid down.

The dispensary law in South Carolina fares worse and worse. Judge Simonton's decision in the Federal Court, that liquors might be brought into the State from outside for personal use, was a serious blow. The failure to secure punishment of offenders against the law in the State courts at Charleston because grand juries will not indict, shows the strength of public sentiment against the system in the larger places. Worst of all, the dispensary does not "pay," for the great profits promised went far to reconcile the people to a trial of the experiment. Tillman figured out that it ought to net the State half a million the first year and a whole million the second. This is the second year, and the report for the last quarter makes the actual earnings for the three months only $5,220, which is less than one-tenth of the profits of the license system that formerly existed. Of course the bitter factional feeling which prevails in the State has prevented so fair a trial of the dispensary as might have been possible under other circumstances, but the indications are that, under the most favorable conditions, it would have fallen far short of the promises made for it. The failure in South Carolina is likely to make other States shy of trying the experiment.

Quay has challenged the Republican party of Pennsylvania to an open contest as to whether he shall be recognized as its absolute dictator. Having bossed the Legislature, he now announces his candidacy for chairman of the State committee. The present incumbent has made an excellent record, and is entitled to reëlection. But he is a member of Gov. Hastings's administration, and as Quay has quarrelled with the executive, the boss insists that the Governor's supporter must be "turned down." The issue is made as sharply and clearly as possible. It is simply whether Quay shall be invested with supreme control of the organization. The opponents of the boss show more readiness to fight than usual, and they seem stronger than ever before. Indeed, the surface indications at the start are most unfavorable to Quay. But he has wonderful resources for such a struggle, and he has won more than once when public sentiment in his party was strongly against him. Hitherto, however, he has usually kept more or less under cover, and he loses certain advantages when he makes the contest in an open field. If he does succeed, in the face of all the disadvantages that confront him, his victory will mark the lowest depth that Pennsylvania politics has reached.

The sentence of Inspector McLaughlin, as Judge Barrett said, was imposed with

full regard for clemency. In less than two years he will be free from prison, and, considering his offences, incarceration for that period is a very mild punishment. It is true that his conviction involves loss of office and salary, as well as of such tatters of reputation as he may have had among his companions. But the same thing is true of defaulting bank-tellers and embezzlers generally. The statute prescribes a penalty for their offences, and the penalty is undoubtedly fixed with reference to the conditions under which the offence is committed. It cannot safely be maintained that when a man enjoying a good income in a responsible position violates his trust, his loss of reputation and money should be considered as in any way atoning for his fault. The mischief of such crimes lies in their perpetration without the excuse of want. When a man who is homeless and penniless commits a larceny, he may be said to do it to satisfy a pressing want, and to a certain degree to deserve mercy. The punishment is graduated according to the temptation. So of homicide: if committed in the heat of passion or under great provocation, the law properly affixes a less severe punishment than when there is "malice aforethought." Now there is no such sudden and urgent temptation to commit extortion as to make it just to impose a light penalty upon those who are guilty of it. And we cannot take very seriously Judge Barrett's observations upon the forfeiture of a great and honorable office, gained by McLaughlin "by twenty-five years of undoubtedly valuable service in various phases of duty." We know too well the manner in which "honorable office" has been gained in our police force to be altogether free from doubt as to the value of the services which have gained it.

On another account Judge Barrett's clemency seems to us to be uncalled for. The defence of McLaughlin was conducted in such a manner as to make it altogether equitable to impose the severest penalty allowed by the law. The difficulties to be encountered by the prosecution were enormous, and few persons probably believed that it would be possible to get a jury which would be unanimous for conviction. We presume that the counsel for the defendant did no more than their professional duty required, but it is undoubtedly true that the public believed that McLaughlin would resort to every possible expedient to escape justice. The delay and expense caused by this desperate defence were very great, and a few such trials would block the whole administration of the criminal law. There is simply not time enough to try all those who are indicted, if they are going to protract trials to such a length. In a fair trial of strength men admire the courage and spirit of a defeated antagonist and feel disposed to treat him generously. But there is no parallel between such cases and that of a prisoner contending for his liberty. Where the prisoner has money to spend and influence to exert, it is the people who struggle at a disadvantage. Every technicality, according to our practice, is made use of against their case, and legal errors can hardly be made except by them. Considering the manner in which McLaughlin's defence was conducted, it seems like encouraging objectionable methods to impose a light sentence.

It was in 1886 that Mr. Gladstone gave the Liberal party the Irish home-rule programme; it was in 1887 that Mr. Cleveland gave the Democratic party the tariff-reform programme. How do the results achieved by the greatest political genius of his century compare with those brought about by the dull and inexperienced man whom the accident of an accident made the head of his party? Mr. Gladstone has not been able to enact a line of his programme into law. For all that the statute-books have to show, the ten years' agitation for home-rule might as well have been conducted in the moon as in England. A good part of Mr. Cleveland's programme is now the law of the land. It is not such a law as he would have had, or as his party was bound to give, but it is a law which is winning its way into popular favor with great rapidity, which thousands of Republican business men secretly delight in, and the main features of which its bitterest opponents now admit they dare not promise to repeal. Defective as these results confessedly are, beside Mr. Gladstone's barren labors for home-rule they seem like a great success. Strange how impetuous and fine-fibred statesmanship spends itself in vain, while incompetency blunders along its heavy way to distinct achievement!

The upsetting of the ministry in England is likely to encourage the bimetallists to believe that the Conservative Liberal-Unionist Government will favor an international conference and all that that implies. This does not by any means follow. The Liberal-Unionists gave notice to the Conservatives some time ago that they would have no part in a government that supported bimetallism. The most influential man in the Unionist ranks on the financial side is Mr. Goschen, and he has steadfastly opposed any change in the English standard, although favoring bimetallism for other countries. He took this position in the conference of 1878, and has never swerved from it. Because he was favorable to an international agreement to which all countries except Great Britain should belong, he has been reckoned as a bimetallist, but he would not be counted as such in any group where the coöperation of England was deemed essential. Germany considers the coöperation of England indispensable. It is still an open question whether Germany will issue a call. The Imperial Chancellor said some weeks ago that he would take the necessary steps to summon a conference as soon as he had obtained the approval of "all" the federal States. Since that time both Würtemberg and Baden have decided against it.

The attitude of the United States, if a conference should be called, has been brought in question. The language of the law authorizes the President to act whenever a conference is called "with a view to secure internationally a fixity of relative value between gold and silver as money by means of a common ratio between those metals, with free mintage at such ratio." A conference called, as the last one was, merely to see if a larger use of silver could be injected into the currencies of the world, would not be the kind of conference which this law contemplates. The President would be justified in sending delegates to a conference in the absence of any law, or (following the Harrison precedent) in calling a conference without any law; but when a specific law has been passed on the subject, he is bound to observe it. The 16-to-1 silverites in the United States would certainly blame the President if he should transcend the law in this particular. It is pretty certain, too, that he has no inclination to outrun the law. Therefore, any call for a conference by Germany, issued before the assembling of Congress, must be a call for the fixing of a ratio and for unlimited coinage of both metals at that ratio. And to this end Germany must come to the conference with a programme and must take the lead in advocating it. It will be a great relief, no doubt, to our delegates to have the onus of leadership resting on somebody else.

Russia's transaction in the matter of the Chinese loan is one of the most singular among recent political developments. In effect, the operation seems to have been that the Russian Government, wishing to maintain either actual or pretended close relations with its Oriental neighbor, made a bid for the privilege of serving China with its £16,000,000 sterling, which China did not feel at liberty to reject. But Russia itself neither had the requisite money nor the means of raising it directly. Hence it had recourse to a Continental friend with plenty of idle money and a sentimental attachment to the Russian Government. France virtually accepts this note-of-hand of China, endorsed by Russia, and, as occasionally happens in private life, the endorser of the note takes all the thanks and credit, and its accepter all the risk. This may be fairly called a novelty in international finance. England has now and then resorted to a somewhat similar procedure, but only in cases where a colony virtually leaned on the home Government for financial help.

THE GOVERNMENT REVENUE.

PERHAPS the most striking of all the symptoms of the revival of business confidence is furnished by the condition of the United States Treasury. It is evident that the deficiency in revenue for the year just closing will be not far from $50,000,000, and the expenditure is still considerably greater than the receipts. Moreover, the revenue counted upon has been reduced by some $30,000,000, the amount estimated to be produced by the income tax. Nevertheless the gold reserve in the Treasury is to-day probably $101,000,000. There appears to be no difficulty in maintaining this reserve, and it seems probable that it may be considerably increased when the export of this year's crops begins. Considering the prolonged deficiency in receipts, this condition of affairs is remarkable, and the contrast between the present state of the Treasury and that of a few months ago is amazing.

It is true that the Government has borrowed considerably more than the amount of the deficiency. The loan effected in November brought in about $60,000,000, and the last loan added some $65,000,000, so that the condition of the Treasury ought to be a very easy one. But, all things considered, it ought to have been easy five months ago. The deficit in revenue was less then than now, and the product of the income tax was reckoned a safe asset. Nevertheless, the Government was then within a few days of suspension of gold payments, while now, although it is apparently no better off, it holds its full gold reserve of $100,000,000, and has other cash assets in the Treasury amounting to almost as much more.

The London *Economist* inclines to take a rather dark view of this situation. It asserts that the estimated expenditure for the coming year is greater than for this, that no new taxes can be imposed before next December, unless a special session of Congress is called, and that even then the hostile majority in Congress may refuse to vote any new taxes. Hence, it argues, for many months to come the Treasury may have to go on drawing on its cash balance in order to cover the current expenditure. But if that process is to continue for any length of time, doubts as to the ability of the Treasury to maintain gold payments are sure to revive. Furthermore, the *Economist* argues, this apprehension cannot be allayed by a new loan, because no new loan can be made until the reserve is actually encroached upon, and the Government has no authority to borrow money for the ordinary administrative expenditure.

It is surprising to read arguments of so feeble a character in a journal having the reputation of the *Economist*. As to new loans, they certainly will not be needed until the gold reserve is actually encroached upon, and when that time comes, the loans can be effected. The fallacy about using up the reserve in paying the expenses of the Government has been exposed too often to deserve further refutation. There will be no material increase in expenditure the coming year. The problem, therefore, is simply this: the United States Treasury has during this fiscal year paid out $50,000,000 more than its income, but has increased its cash assets, by borrowing, to the amount of, say, $125,000,000. It will begin the coming year, therefore, with perhaps $75,000,000 more cash than it had a year ago. If the coming year were to be as lean as the one that is just closing, the Treasury would still be able to go through it and emerge with a balance $25,000,000 greater than it had a year ago. It is evident that the process of "drawing on its cash balance" is one that can be regarded without apprehension for some time to come; but only upon one condition.

That condition is the appearance or the prospect of improving revenue. If the revenue continues to shrink, it will certainly arouse anxiety. But what is the outlook for revenue? Upon what theory is it maintained that the revenue of the Government during the coming year is to be no greater than during this year? The volume of business throughout the country, judging from the returns of the clearing-houses and railroads, which are the best evidence we have, was last year perhaps not more than four-fifths, certainly not nine-tenths, of its normal volume. But the returns of the clearing-houses for the current weeks show that the business of the country is from 20 to 30 per cent. greater than last year. The earnings of the railroads are already perhaps 10 per cent. greater than last year, and, unless most serious calamities befall the crops, they will this autumn show an even greater increase. The volume of production is in every branch of manufacture steadily, and in some rapidly, enlarging. The number of men employed is very much greater, and the wages paid are higher, than last year. All this means that more things are bought, and the revenue of the Government, which is principally derived from taxes upon such things, is therefore certain to increase. It must not be forgotten that the sugar duties have scarcely yet begun to be productive, and that the revenue from distilled liquors is $12,000,000 or $15,000,000 short of what it is under normal conditions. We cannot here present the details which show that a largely increased revenue is probable, but will specify one single fact as perhaps the most significant of all. The number of immigrants last May was about 49,000; in May, 1894, it was about 33,000. Immigration does not increase unless the country is prospering, and the country cannot prosper without paying more in taxes. It would require an increase in revenue of only 10 per cent. to extinguish the deficit; but an increase of 5 per cent. would extinguish apprehension, and such an increase is beyond question likely to be manifested very soon.

THE ENGLISH SITUATION.

THE first and strongest impression made upon most Americans by the resignation of Lord Rosebery's Government and the almost certain passing of the Liberal party from power for at least some years, will be that of a tremendous and fruitless waste of party energy. It is nine years now since the English Liberals undertook to meet the aspirations of the Irish nation for self-government in local affairs. Under a leader of heroic courage and marvellous activity, they went to defeat on the issue of healing the deadly Irish wound by pacificatory treatment, and then, in 1892, after six years of agitation and hope deferred, came back to power only to find their way blocked by the brute mass of the House of Lords. Now, after three years of vain effort, they leave office without a single act of positive Irish legislation to point to as the fruit of the long and sore struggle.

But only the short-sighted will say that the struggle has naught availed. English political reform moves in ways as mysterious as those of divine Providence, and no one who recalls the manner in which Sir Robert Peel forced his party to repeal the corn laws or Disraeli the Conservatives to pass the Reform Bill of 1867, need despair yet of seeing the Irish cause suddenly spring into new vigor and promise even under a Tory cabinet. It is already clear that Mr. Chamberlain will be a member of that cabinet, and he has had a half-dozen Irish home-rule bills up his sleeve any time these ten years. No one who has marked his shifty course for a decade past would be shocked at the suggestion that he might turn another sharp corner and come out as the original Irish Home-Ruler. In fact, for the Conservatives in general, the advocacy of some measure of Irish local self-government would not now require so instantaneous a somersault as did their taking up the extension of the franchise in 1867, and passing a bill far more radical than the one they had denounced and beaten Mr. Gladstone for bringing forward. Both Lord Salisbury and Mr. Balfour could point to passages in speeches of theirs foreshadowing such a sea change. Of course their home-rule bill would be safe and honorable, of a kind to bind the empire together, and not the mad revolutionary thing that the Gladstonians had affrighted the country with. Fair names and grave excuses could easily be found in plenty if a political exigency should compel the Conservative leaders to take to blessing what they had been banning for ten years.

The thing which, if anything, may be expected to force such action on a Conservative government, is the return of a solidified Irish parliamentary delegation to the position they occupied prior to 1886. In a shrewd and brilliant article in a late number of the *Fortnightly*, written by an Irishman, presumably Mr. Redmond, the way was incisively sketched in

which the Irish members might again demonstrate the need of doing something for Ireland, if only to keep Parliament from utter breakdown. Despite the new devices of closure and the new powers of the Speaker, it is still possible for fluent and acute Irish members to make the burden of imperial and local business greater than Parliament can stagger under. Day after day and month after month, they can, as before, forcibly remind the Government and the country, in this way, that the consuming desire of the Irish people for control of their own local affairs remains unappeased. It would only be a question of time when something would have to be done to end this intolerable and unworkable situation. A beginning might be made by applying Scotch precedents to Irish difficulties. A grand committee for Scotland already has practically supreme control over all local Scottish legislation. Various proposals to appoint other committees of this kind were made only a few weeks ago in Parliament, and were not unfavorably received by the Conservative leaders. A grand committee for Wales is almost certain to come very soon, and stranger things have happened than that a grand committee for Ireland should come too. With Parliament more and more unequal every year to the vast mass of business thrust upon it, with local self-government in England already given a great extension by recent legislation, and with the tendency clearly visible in Parliament to divide up the work of law-making according to subject and nationality, it would be rash in the extreme to affirm that the Liberal overthrow meant the overthrow of Ireland's hopes.

Another thing which it would be rash to predict is the strength and permanency of the alliance of Liberal Unionists and Conservatives. For the moment that alliance will be made closer than ever before. In speeches before the National Conservative Union on June 14, both Mr. Chamberlain and the Duke of Devonshire made it clear that the Liberal Unionists were now prepared to sink their separate organization in that of the Conservatives. The leaders will no longer refuse, as in 1886, to take office. They hope to found a new united and homogeneous party, neither Liberal nor Conservative, but "national," or something of the kind. The Duke frankly admitted that many serious difficulties stood in the way of complete amalgamation. He would not conceal the fact that "a severe strain would be placed upon many of our most ardent supporters if they found their leaders occupying positions in a Government avowedly Conservative." Nor did he see clearly how the radicals of the Liberal-Unionist following could get on well with the great mass of the Conservative party "averse to change of any kind, and unwilling to acknowledge the existence of the new forces with which we have to deal." But the home-rule terror, he believed, would bind these irreconcilables permanently together. Less interested observers will not believe it. Irish home rule is but a passing phase of constitutional policy; it cannot permanently create and divide parties. It must soon be either settled or shelved, and then the great differences of personal character and political theory which make men and parties radical or conservative will reassert themselves and redraw party lines. The influence which rains from duchesses, and the social prizes which they adjudge, may keep Mr. Chamberlain a contented sharer of Conservative cabinets and dinner-tables, but his great artisan and middle-class following, which has made him what he is, will not have the same sunshine of noble favor to bask in, and will not be so complacent.

INTERNATIONAL INSINCERITY.

THE ceremonies attendant upon the opening of the Kiel canal are supposed to furnish a striking demonstration of international good feeling. So all the correspondents assure us. The occasion marks the beginning of "a new era of peace." Embassies and war-ships from so many foreign countries bespeak a spirit of universal fraternization. The whole celebration is a great tribute to the power of peaceful intercourse between nations, and a veritable triumph of international peace and good will.

A glance beneath the surface, however, will show that there is a great deal of sham and insincerity about all this. In the very gathering of war-vessels there is manifest a spirit the reverse of peace-loving. Each nation sends its biggest ships and heaviest guns, not simply as an act of courtesy, but also as a kind of international showing of teeth. The British navy despatches ten of its most powerful vessels merely as a sample of what it has in reserve, and with the air as of one saying, "Be warned in time, O ye nations, and provoke not the mistress of the seas." French and Russian squadrons, in like manner, put on their ugliest frown lest host William should presume upon the jollification to make too friendly advances. Our own American ships join the fleet with the feeling doubtless animating many an officer and sailor on board that it is time the haughty Europeans learned that there was a rising naval power across the sea which they had better not trifle with. A different result could scarcely be expected from an invitation extended by fire-eating Wilhelm. The affair is very like an appeal to "liquor up" addressed by Alkali Ike to Silverado Bill and Tombstone Tom. Bill and Tom walk up, lay their "guns" and knives on the bar, and tell Ike that they will drink with him, but that it will be a bad day for him if they catch him at any of his tricks.

An especial air of bouffe attaches to the presence of the French and Russians. As lovers of international peace, especially as lovers of Germany, they are truly comic. The French fleet, in fact, could hardly get away at all. The Minister for Foreign Affairs had to answer a shower of interpellations as to what the Government meant by showing courtesy to Germany while Alsace and Lorraine still lie a-bleeding. M. Hanotaux could save himself only by assuring the Chamber that the whole thing was an empty form, and that all true Frenchmen could keep on as before hating the Prussian despoilers and getting ready for a speedy *revanche*. Even so the rage and fury over the thing in some parts of France were great and unconcealed. At Toulon the flags were at half-mast, to show how keenly was felt the national disgrace of even being polite to the hated Germans. The statue of Alsace-Lorraine was draped. Relief was found only in emphasizing the Russian alliance, and in arranging to have the French and Russian fleets enter the canal side by side, as a practical challenge to the Dreibund to come on as soon as they got ready. These intrigues and manœuvres helped to make the spectacle of international courtesy and peace complete and touching.

But the most striking insincerity of all was to be found in the opening of the Kiel canal itself. It is dedicated to "the traffic of the world." Hence its international significance, hence all the rejoicing and glorification. But what do Germany, and France, and the other Continental Powers really think about the traffic of the world? Why, at this very moment, as for twenty years past, they are straining every nerve to fetter and hinder and reduce as far as possible the free commercial intercourse of nations. The really significant figures in Germany are not lordly William and his officers, opening the new canal to commerce, but Kanitz and the Agrarians demanding that the empire be closed to commerce, and the Chancellor on his knees to them. M. Méline and the French protectionists, Cánovas and the Spanish protectionists, Italy with her discriminating duties against France, Belgium now contemplating for the first time a departure from the policy of free trade, Howard Vincent and the "fair-traders" in England—these are the men and this the spirit, that most truly represent the predominant sentiment of the nations to-day about "the traffic of the world." New canals and railroads are all very well if they help *us*, if they carry our goods exclusively; but they at once become objects of horror, demanding new restrictive legislation and suggesting the necessity of war, if they enable a foreigner to sell another dollar's worth to us.

There was, in truth, something more than sentiment, there was a profound principle, in Cobden's linking of free trade with international peace in his historic programme. A commercial war may be the deadliest of all. It certainly may be the meanest and most malicious. When the McKinley tariff threw thousands of workmen in Vienna out of em-

ployment and into misery, and the *Tribune* gloried over the spectacle like one of Tertullian's saints in heaven exulting in the torments of the damned, we had an object lesson in international malice not easily to be forgotten. An overt act of war could not have aroused baser passions, or been better fitted to inflame international ill-feeling and resentment. But that sort of thing, in kind if not in degree, is all the while happening under exclusive and retaliatory tariff legislation. It cannot be denied that the causes of international friction have been vastly multiplied by the ravages of the protectionist spirit in Europe during the last two decades. The repeal of the reciprocity treaties negotiated under the influence of Cobden's propaganda marked the beginning of a state of commercial war in Europe, which has caused as much international exasperation and almost as much suffering as many an armed conflict that the histories dwell upon as calamitous. Until this proscriptive spirit of commercial hostility and jealousy passes away, or wears itself out through sheer absurdity, you may open as many inter-oceanic canals as you please, but you cannot persuade sensible people that your talk about their significance for international good feeling and the general love of peace is anything but a bit of transparent insincerity.

THE SEVENTY AND ITS SUCCESSORS.

THE farewell address of the Committee of Seventy is a very modest document, containing as it does the record of a great political revolution. We doubt if many of the handful of earnest reformers who set on foot the meeting in the Madison Square Garden concert-hall on the evening of September 6, 1894, were sanguine enough to hope for anything approaching the remarkable results which followed. They were determined to make an effort to organize the non-partisan sentiment of the city into a movement for the overthrow of Tammany, but there were few indications at the time that they would be successful. The city was well filled with critics then, as it always is at the outset of such undertakings, who were sure nothing could ever come of it, and who were never tired of asking the reformers if they really believed they could accomplish anything. Some of them were at the meeting, and volunteered their profound conviction that it was sheer folly to attempt to defeat such a powerful organization as Tammany Hall with an unorganized mob of reformers who had nothing but sentiment to fight upon.

Yet look at the outcome! Tammany Hall routed and practically excluded from all branches of the city government for three years. The Tammany police bench, with its thugs, liquor-dealers, and semi-criminals, abolished for ever. Two Tammany candidates for the higher courts defeated, and two upright and able men elected in their stead, both going upon the bench free of all political pledges, and without paying an "assessment" to any political organization as the price of their nomination. In addition to these great gains, we have a model Street-Cleaning Department, a model Police Board, and a collection of officials at the head of other branches of the municipal service who, while some of them might be of higher character and ability, are none of them ex-criminals or the ex-companions of criminals.

For all these advances towards genuine reform in municipal government we are indebted to the Committee of Seventy. It is impossible to overestimate the patriotic devotion of the members of this committee to the work placed in their hands. They were all busy men, and every moment which they gave to the public was a sacrifice of the time and energy needed for their private affairs. If the Legislature had been equally patriotic, if it had been its own master rather than Tom Platt's property, the record of the Seventy's work would have been far more impressive and the results far more enduring than they are. We should have been able to add to the list of achievements a thoroughly reformed public-school system and a thoroughly reformed police system. The blame for the failure of these two reforms rests primarily upon Platt and his Republican Senators, but the Democratic Senators are almost equally guilty. They could, by combining with the few anti-Platt Senators, have secured the passage of both measures, but from the beginning to the end of the session they were almost solidly arrayed with the Platt men against all reforms.

So much for the past. The committee's record is a shining one and will hold a proud place in the history of the city. We are unable to say why objection was made at the final meeting to the simple statement of fact regarding Mayor Strong's approval of the bi-partisan police bill. That act was a part of the record, it was a notable fact in the history of the committee's work, and it should be set down with the other facts. Nothing could be more absurd than to imagine that it could be abolished from history by omitting it from the record, or the consequences of it be avoided by calling attention to other facts in the Mayor's administration.

In regard to the future the deliverances of the committee are wise and impressive. They say truly that "only a beginning has been made," that a "long and arduous struggle still confronts those citizens who desire to see the affairs of this city administered solely in the interests of its inhabitants," and that permanent victory can be secured "only by a general recognition of the truth that the efficient administration of local government demands an entire separation from the field of national politics." The task of conducting the work on these lines they leave to the Good Government clubs and the City Club, and we are glad to be able to say that preparations have been made already by these organizations to continue it. What we must have is a city party, distinct from all other parties, which will appeal for membership on city issues alone, and it is the intention of the City Club and the affiliated Good Government clubs to lead the way for the formation of such a party in the immediate future.

The present year affords an exceptionally good time for such a movement. We are to have our first election under the new constitutional provision for separate municipal elections. We are to hold it at a time when questions of municipal administration are attracting unusual attention, and when the experiment of conducting a non-partisan administration on a multi-partisan basis is being made with only partial success. Every thoughtful man, while admitting that Mayor Strong's achievements are probably as great as we had any right to expect from an executive elected as he was, is convinced that the method of his election was a necessary first step towards a really non-partisan nomination and election, and as such cannot be repeated, but must be used as a basis for advance to better things. The city is full of voters who are ready to be led into a genuine non-partisan city organization, and if that leadership be undertaken in the proper spirit, as we are confident it will be, its success cannot be doubted. It is fortunate that so many judicial nominations are to be made this year —three new judges of the Supreme Court, two General Sessions judges, and two City Court judges. The voters are more interested in non-partisanship on the bench than anywhere else, and a list of judicial candidates of the highest character, not a man of them associated with any partisan faction or organization, would be a strong rallying-ground upon which to muster strength for a city party.

THE BRITISH OPIUM QUESTION.

LONDON, June 12, 1895.

EVERY country has its weak points. There is, however, this difference between the failings of the United States and those of the United Kingdom: with you, the institutions of the country are in the main absolutely fair, as between man and man; if they are not fairly worked, it is the fault of individuals or localities. Here, on the contrary, each citizen who does not protest is partly responsible for institutions and laws which are often most unjust. The United States has kept steadily clear of foreign complications. The United Kingdom is widely involved therein. Only those who have had opportunities of looking below the surface of affairs can realize how every British voter, by the nature of the empire, is constantly being involved in shady transactions and frequently in crimes of the deepest dye. One of the most flagrant has been the opium traffic. Wars to legalize and extend the use of this drug in China are among the worst crimes on record. The grass soon grows over the graves of men slaughtered in battle, and internecine wars are almost forgotten after a cen-

tury or two; but the miseries and demoralization engendered by a vice like the use of opium are endless. Posterity will regard it as almost incredible that the wealthiest nation in the world, boasting itself the greatest and freest, should have waged wars for such a purpose—that the sunny lawns of thousands of English homes, the rose-covered porch of many a parsonage and many a trim Sunday-school, owe their erection to and have drawn much of their support from the degradation of "brethren" and "sisters" abroad in opium dens and bagnios. No subject has more disturbed the "Nonconformist conscience." Late developments have drawn increased attention to it.

Opium is a Government monopoly in British India. The cultivation of the poppy, permitted only in certain narrowly prescribed areas for convenience of oversight, is carried on under license by means of Government advances. The product is manufactured into opium and sold by Government. Ninety per cent. is exported to China and the Straits Settlements. During the first ten years of the century, the exports amounted to 2,500 chests, value £250,000. By 1851 the trade had increased to 53,000 chests, value £5,459,000; by 1861 to 59,000 chests, value £10,184,000; and by 1871 to 89,000 chests, value £11,790,000. It appeared to have reached its maximum between 1876 and 1880, when it rose to about 102,000 chests, value £12,640,000. Finding they could not keep out foreign opium, the Chinese have taken to growing and manufacturing themselves. The export has now declined to 76,000 chests. It is appalling to learn that the present import amounts to only one-seventh of the quantity consumed in China. The average area under cultivation of the poppy in British India for the decade ending 1862-'3 was 338,000 acres; 1872-'3, 475,000; 1882-'3, 519,000; 1892-'3, 513,000. The net opium revenue to the India exchequer, which in 1880-'1 was RX8,450,000* (£7,042,000 in gold), has now fallen to RX5,123,000 (£2,775,000 in gold). This latter sum forms 14 per cent. of the total revenues of the country.

The evils of opium are patent. Its use in most civilized states is permitted only under restriction and regulation. China, in her treaties with other nations, has stipulated against the introduction of the drug. The Japanese are strong enough to prevent its importation. As in the case of slavery, before the opium trade had become a great interest, and while, after becoming important, it was at its chief centre not seriously threatened, all were ready to acknowledge its injuriousness, and to profess a desire, if possible, to restrict it. In 1817 the East India Company, writing to the Governor-General, expressed their wish "to restrain the use of the pernicious drug. . . . Were it possible to prevent the use of the drug altogether, except strictly for the purpose of medicine, we would gladly do it in compassion to mankind." From that period until recently, recurrent official opinions of equal weight were uttered as severely condemnatory of the trade. The licensing arrangements regarding the growth of the poppy and the manufacture and sale of opium may at first have aimed at checking the evil. But as license fees and duty became a valuable source of revenue, the sale was doubtless fostered, whether consciously or otherwise, and by the lower if not the higher officials. An immediate result of the Chinese war was to enlarge the demand. When Burmah was annexed, the sale of opium was there legalized, despite strenuous protests from the inhabitants. Meanwhile, thoughtful public opinion at home gradually strengthened against the increasing imperial implication in the traffic. Anti-opium associations were formed, four of the principal of which at present act in hearty union. Sir Joseph Pease, Bart., M.P., a member of the Society of Friends, has led the movement. In 1885, the use of opium having been fixed upon China, she was, under the Cheefoo Convention, theoretically enabled to lessen at discretion the importation from India; but considerable passive difficulties were left in the way of her doing so. The continued opposition of the Burmese and the pressure of public opinion at home compelled the Indian Government to institute new regulations there in 1894. The possession of opium, except for medicinal purposes, is now forbidden *to Burmans*. The rule is absolute in upper Burmah; in lower Burmah, natives were allowed some months within which those who had contracted the opium habit might still register themselves as consumers. Its use is still permitted in Burmah to Chinese and other foreigners.

The anti-opium movement appeared nearly successful in 1891, when, on the 10th of April, in the House of Commons, the following resolution, moved by Sir Joseph Pease, was carried:

"This House is of opinion that the system by which the Indian opium revenue is raised is morally indefensible, and would urge upon the Indian Government that they should cease to grant licenses for the cultivation of the poppy and sale of opium in British India, except to supply the legitimate demand for medical purposes, and that they should at the same time take measures to arrest the transit of Malwa [native-states] opium through British territory."

In the course of the debate, Sir James Ferguson, speaking as Under-Secretary for Foreign Affairs on behalf of the Government, made the following satisfactory announcement:

"The Chinese at any time may terminate the treaty on giving twelve months' notice, and to protect themselves they may increase the duty to any extent they please, or they may exclude it altogether. This I think I may say, that if the Chinese Government thought proper to raise the duty to a prohibitive extent, or shut out the article altogether, this country would not expend one pound in powder and shot, or lose the life of a soldier, in an attempt to force opium upon the Chinese."

Mr. W. H. Smith, leader of the House, stated that the policy of the Government of late had been to diminish the area of cultivation of the poppy.

Next year the Conservatives were defeated and the Liberals came into power. Six members of the new Cabinet and ten other members of the new Government had voted with Sir Joseph Pease. On June 30, 1893, the anti-opiumists in the House moved for a royal commission to inquire into the means by which the resolution of April 10, 1891, should be carried into effect. This was met by a motion on behalf of the Government, by Mr. Gladstone, for a royal commission to inquire into the question and (practically) to report as to whether the resolution of April 10, 1891, should be or could be acted upon. Great pressure was put upon the followers of the Government, and Mr. Gladstone's motion was carried by 184 to 105, the anti-opiumists voting against it. A commission of nine was appointed; evidence was taken in London and India. The final report recently appeared, evidence and report extending to 2,500 pages of foolscap folio. The report, agreed to by eight of the nine commissioners, is regarded by the pro-opiumists as an unequivocal triumph. Its conclusions in effect are: that it has not been proved necessary or desired by the Indian people that the manufacture and sale of opium should be prohibited; the import into China is permitted and regulated by treaties deliberately accepted by the Chinese Government; no action tending to destroy the trade should be taken; the refusal to permit the transit of native Indian opium through British territory would involve the necessity for pecuniary compensation and a heavy loss of revenue to the Government of India; the finances of the country are not in a condition to bear such loss, nor the cost of preventive measures, nor the loss of revenue resulting from the adoption of a general policy of prohibition; there is no evidence of extensive moral or physical degradation from the use of opium in India; it is extensively employed for non-medicinal and quasi-medicinal purposes, in some cases with benefit and for the most part without injurious consequences. "We are not prepared to make recommendations [towards its abolition] without careful study of details."

The anti-opiumists, though disappointed, are not discouraged, and are mustering their forces with renewed ardor to the attack. They take their stand upon the minority report of Mr. Henry J. Wilson, M. P., which traverses nearly all the conclusions of his fellow-commissioners. The majority report is discounted by the manner in which the commission was captured and nursed by the Government in India, and the extent to which, through the influence of this Government, evidence in favor of the trade was put forward and evidence against it minimized or suppressed. The Government of India, the interested party, did not stand neutral, as it ought to have done. The commission, on landing, was met by a letter from the Viceroy pointing out the difficulties which the abrogation of the trade would entail upon the Government. The members were guests of the Viceroy in Calcutta, and of local authorities elsewhere. Since the appearance of the report, the commissioners have been thanked for it by the Indian Government. The result is much the same as if, forty years ago, a commission had gone South to inquire into the evils of slavery and the possibilities of abolition, and been guided and coached by Southern officials and entertained by Southern governments. Only men of very clear moral insight and independent judgment could stand such an ordeal. This is the third occasion on which, within the period of office of the present Government, the Indian bureaucracy has shown itself able to circumvent the deliberate conclusions of the British Parliament on questions of Indian policy. (1.) It has checkmated the decision of 1891 regarding opium. (It has, through this report, pronounced that Sir James Ferguson was mistaken when he asserted that China had it in her power to terminate the present agreement, and that Mr. Smith was wrong when he stated that the area of poppy cultivation was materially decreasing.) (2.) It has reversed the decision of 1893 regarding simultaneous examinations in England and in India for the higher Indian civil-service appointments. (3.) It has evaded the directions of the home Government prohibiting the regulation of vice. "It is most important," says Mr. Wilson, "to emphasize the fact that not only do the Maharajah of Darbhanga and Mr. Haridas Viliaridas [the native Indian members] agree with me in certain very important particulars, but the evidence in India was unanimous, and the com-

* RX signifies "tens of rupees." When the rupee was worth two shillings, RX1=£1. In 1881-2 the rupee stood at 1s. 8d. It is now worth only 1s. 1d. Indian financial statements are made out and presented to Parliament in tens of rupees (RX).

missioners are unanimous, in condemning the *smoking* of opium; and inasmuch as nine-tenths of all the opium produced in British India is used for *smoking* in China, the Straits Settlements, etc , it is clear that even the majority report has gone a long way towards proving the traffic is morally indefensible."

Although the House of Commons has by a large majority practically endorsed the report of the majority, the anti-opium movement is likely to progress and gather strength. "There is something distinctly humorous," says one of its ablest leaders, "in a call to draw down the curtain on an agitation of fifty years' steady growth, carried on by men many of whom are more deeply versed in the question than any of the commissioners, because . . . of the conclusions of nine gentlemen who have been taking evidence under the auspices of the Indian Government." British anti-opiumists will not have Indian native opinion on their side unless they are clear upon one point. The trade has been fostered and developed in India by the British people for the supposed benefit of the British Empire. On the British, not on the Indian, people should fall any loss resulting from its abolition. D. B.

DURHAM DOCK LABORERS AND PITMEN.—II.

ENGLAND, May 10, 1895.

BETWEEN trimmers and all the Dock workmen in Class I. and the pitmen of Class II. there is completest distinction in every way. Even when living in adjoining houses, they rarely know or speak to one another. The old feeling that a pitman is in most cases a brainless "Geordie," only fit to work in darkness and dirt, strongly survives; and many pitmen feel this as a real grievance, which, however, in their eyes excuses their drunken freaks. Houses are generally provided by pit-owners for their workmen—long ugly rows of one-storied buildings; and this has tended in times past to make them shy of any society but their own. And the work is so different from anything above ground—it means such unseasonable hours, and, in the old days, such terrible risks—that many a trimmer looks back with shame on the time when as a boy he "went down pit." The danger no longer exists, for most careful precautions are now taken against all preventable accidents; with the happy result that fewer men are now injured in coal-pits than in what is generally considered the less dangerous work of the ship-building yards. But pitmen do not change their nature all at once. For generations they had been the least taught and most neglected class in England. They have only within twenty years given up cock-fighting; their chief sport still is the degrading and disgusting practice of rabbit-coursing—which enables us to understand how the hideous cruelties once common could be perpetrated upon the ponies in the pits. Even now there is nothing which seems more to deaden the finer feelings of a boy of fourteen than to be sent to drive "tubs" while his father is "hewing" coal for a colliery.

The pay of hewing pitmen would be considered good by any who knew how to spend and how to save. The full-blown "hewer" is paid according to the amount he hews and sends up from the "face" or solid wall of coal. The amount he can hew depends a great deal upon the nature of the "cable" or position in the pit he has won; for the hewers all draw lots for their "cables" every quarter. If he has a hard, difficult face to work on, he may earn only twenty-five shillings a week; if he has been lucky and has drawn a spot where the coal is soft and shelvy, ready to split, he may earn as much as £4 a week. Every pitman has his "marrow," or mate, whose account runs in common with his own, and who takes his place at the face when the first shift of seven hours is over and the back-shift men succeed. A pit is thus working continuously throughout the week. Hewing is hard work at any time in the close though equable air 500 feet below ground, which allows the men on the face to take off all their clothes but their shorts and shoes. It is doubly difficult when, as in some cases, the hewer cannot stand up or sit up, but lies on his side to hew at a seam of coal which is perhaps only a foot deep. The habit of walking along low galleries makes most pitmen stoop, and gives to them all a wondrous knack of sitting upon their heels.

But if the work is exhausting, the hours are not long. The rule throughout Durham is that seven hours from "bank to bank," *i. e.*, from going down the pit-mouth to coming out again, comprises the pitman's day. Frequently, when landed at the bottom, he has three miles to walk or ride before he reaches his work, and the same distance back ; so that five hours' hewing may often represent the amount of work done. In addition to money wages he has considerable privileges. He lives rent-free in a house which his pit-owners provide, and which, if not large, is generally water-tight, and often has a useful garden attached, which he usually refuses to dig. Coal, also, is supplied free to every house in which any member is working in the colliery, and though no wife ever lights more than one fire, she consumes a ton of coal every fortnight, for she never lets that one out. The last duty before going to bed is to put three or four bucketfuls of coal in the grate which may burn up for breakfast. Besides this, the pitman is insured by the company, out of his wages, and a doctor is provided.

With such resources, one might well suppose that pitfolk should be comfortable. Yet the standard of comfort in pit villages is very low indeed. There are many cottage homes in agricultural parts of Norfolk or Essex where the united wages of the family is never more than 15s. a week, out of which rent has to be paid for house and garden, and coals bought, which are yet more neat and clean, and supplied with better furniture, than most pitmen's houses. There is no comparison between the two so far as luxury and refinement are concerned. Yet the income of the northern home is often five times as much as the other. The son of the pitman rarely leaves his home until he is married, and not always then. The mother of a family has thus very frequently not only the wages of her husband but also the wages of two or three of her sons to depend upon for keeping house. A son of fourteen years may be earning 15s. and another twenty years old may earn £1 a week, while the father's wage probably averages £2. This gives a total weekly income of £3 15s., with house rent, rates, taxes, water and coal free—or a third more than the stipend of an ordinary curate; and this is by no means a rare case. But economy is unknown, and the waste of food is very painful to see. A pitman must be well fed, for he believes that if a man will not eat, neither shall he work. So, also, must his inevitable rabbit-dog. This must have its mutton chop though his child go barefoot for it. Yet if the women knew how to manage, they might humor the most absurd whims of their husbands and yet save. Some of the more knowing ones contrive to do this through the coöperative stores. These stores allow interest, which may be claimed at the year's end, upon the total amount spent with them. The wise women allow their husbands to forget that for every shilling spent at the stores a penny is returnable, and instead of drawing out their share at the year's end, leave it to accumulate as a nest-egg. This is the process which they name "eating themselves rich." Whether for this or for other reasons, co-operative stores are particularly prosperous in pit districts, though it is almost always allowed that you pay more in them for an article which is equally good in a shop.

No one who had not seen it would believe in the picturesque savageness which a pitman's house presents in the afternoon when father and sons return from their work. They come in black all over with coal-dust, their blue stockings and half-shoes smeared thick with pit-clay, their hands grimy with blasting powder. Without washing a finger or an inch of their faces, they sit down at once on the wooden settee before which the deal table is drawn up. Without a word of greeting or question of any sort, the mother draws from the oven the boiled duff and mess of meat—five or six pounds in all—which is the unchanging meal. Boys and father eat all up, plum duff first, then meat, then gravy with bread, and wash all down with perhaps a pint of water. Though at the fortnight's end or pay Saturday he may drink beer and spirits—one hewer told the writer that to get drunk once a fortnight was his favorite form of medicine, better than salts or pills—the pitman rarely drinks anything intoxicating at his meals. Then the pipe is filled and lighted, and the working portion of the family take it in turn to wash.

This again is a peculiar ritual worthy of notice. The mother or sister brings a large tub full of warm water, a towel, and some cakes of soap, which she deposits in front of a roaring hot fire. The man then slowly divests himself of shirt, shoes, and stockings, rolls up his shorts full six inches above the knees, and seats himself naked, except round his middle, on a wooden "crocket" or stool, with the water-tub between his legs. Slowly he plunges his arms in, and leaves them to soak for three or four minutes, then draws them out and soaps them, his chest, neck, and shoulders. His legs and feet he leaves till last, and his back he refuses to wet at all, lest water should make it weak. At the end of twenty minutes he considers himself clean, and calls to his wife or mother or sister to bring him a towel. All this goes on in the principal room of the house, which opens immediately upon the street, which is kitchen and bedroom and bake-house and bath-room all in one, where the chickens run about picking up crumbs and the litter of greyhound puppies quarrel over a bone. His bath over, the pitman as leisurely dresses himself, in full view of his family and the passers-by; then lights his pipe, whistles to his dog, and goes to lounge away the rest of his time in the reading-room or at the street-corners until bedtime comes. The hours at which he begins work again vary considerably according as he is on a fore or back shift, and so a regular "caller" is always paid to go round and wake men at the proper hours. On the door of every pitman's cottage you may see chalked up a notice of the hours of calling.

One reason for the thriftlessness of many of the pitfolk is the unstable nature of their work. It might be thought that when houses and gar-

dens are provided there would be security for continuance. This is not so. The signed contract-note between manager and workmen in the pits binds the two parties for only a fortnight. Cessation of work means also leaving their house. When trade falls bad, managers are often reduced to the necessity of paying off fifty men a week until times are better, and even continue to do this until none but the "viewers" or foremen inspectors are on their books. Under these circumstances men move about the country very frequently in search of work, and many try America or Australia for a time, though they generally gravitate back to the place where they were born. Besides the fluctuations of trade, there are peculiarities proper to mining which make work precarious. The seam of coal may give out, or become so inferior in quality as to be no longer worth working; water may come in in such quantities that no pumping can keep the pit workable. Thousands of pounds are spent in trying to conquer this difficulty; and if all fails, five hundred families are sent adrift to get work where they can find it. A whole village of two thousand people is left empty and deserted, while grass grows in the once populous streets, and sheep feed in the once fertile cabbage-gardens. There is an instance of a company which, to keep its men employed and not to lose custom, actually contracted to deliver some thousands of tons to a Swedish railway *freight-free* for six shillings a ton. This happened within the three years last past. Possibly after some years a speculator buys pit, plant, and houses for an old song, succeeds in pumping it dry, or discovers some new process for making it pay; and in six months the original workers are crowding back from all parts of England, to inhabit again the houses they had left, as quickly as mason and carpenter can make them habitable.

One economical law is brought home very clearly to any one who studies social questions among such classes. It is crystallized into the North Country proverb, which says, "It is not what a man addles [earns], but what he saves, that makes him rich." And you are only likely to save when you know what your income exactly will be. Then can a man calculate his expenses beforehand, and decide how much he can afford to lay aside every week for a rainy day. When wages vary as much as ten shillings every week, the standard of comfort is apt to be ruled by the lowest receipt, while excesses over this are spent in extravagance. Security and fixity with an income of twenty-five shillings a week is more conducive to comfort and thrift than a higher average income, say, of two pounds a week, which comes in irregular instalments. All the thinking workmen see the truth of this, but they could not if they wished (and perhaps they would rarely wish) free themselves from the competitive contract system. It is demoralizing to their character, and makes them old men years before they need have been. They lose the peace of mind which comes from doing work well because it is your duty, irrespective of the pay, but they gain the pleasure of feeling more direct pecuniary interest in the work they do, and the delight of finding sometimes that they have earned more than they expected.

The third class, the casual Dock laborers, firemen, and seamen, are not in any way peculiar to the district. They live on the smallest and most doubtful wages, very frequently in one room and generally in much dirt. There are many of them verging on the line of the "submerged tenth," bankrupts in health and character and purse, living from hand to mouth, falling into excess of every sort after any windfall of wages. Some, the lowest of all, do not do twenty days' work in the year, and yet have wives and families. How they manage to exist is an insoluble problem. The craze for drink and tobacco is said sometimes to be so overpowering on men who spend half the year in a workhouse, that so soon as they have earned fourpence by an hour's work, at unloading a timber-ship, they will draw their pay, buy a glass of beer and half an ounce of tobacco, and do nothing more that day. For these there is no moral help. They are a residuum who can only be treated as children or lunatics. W.

CARDUCCI—TASSO—FERRARA.

BOLOGNA, June, 1895.

ON the 12th of May, the day chosen by Ferrara to commemorate the third centenary of Tasso's death, Zanichelli published Carducci's "Ode to the City of Ferrara," which will assuredly be placed among the first and greatest of his poetic works. The concentrated vigor of conception, the exquisite form, the resonant melody of the second portion (in Saphic metre), the majestic distichs of the first and third parts, require a Longfellow to render even in blank verse; but the whole poem is so complete a history of Ferrara, from its birth till the hour when the "accursed Vatican she-wolf" assailed, wounded, and seized upon its prey—the figure of Tasso there in his youth and glory driven to madness not by love for "Leonora, senz' amore virgine matura," not by the persecution of the Duke of Este, who was throughout his best friend and protector, but by the moral and material terrors of the Vatican, stands out in such strong relief—that the ode given in prose cannot fail to charm. Carducci's numerous classical and mythical allusions are so frequent that one has to take one of his own "cold baths of erudition," and hence the need of occasional notes. At the end of the poem we read what here follows:

"In these verses the history of Ferrara and also its mythical pre-history—even the geological and psychological conformation of its province—are introduced to represent the preparation and the development of the epopee which was destined to illustrate the city. Poetry may, peradventure, yet hold its own in this field. The present belongs to the drama, the novel, the newspaper; the future to God; the past, the *doloroso* glorious past, may yet belong to poesy, especially in a history so complex, made up of so many elements, as is that of Italy."

Carducci, in his lectures delivered in the University of Bologna, 1868-71, on "The Development of National Literature," places its fifth era towards 1490,

"the year of the first foreign invasion, when the greatest poet, Ariosto, the greatest prose-writer, Machiavelli, were in their prime. This era comes to maturity about 1530, the year of the fall of Florence, the death of Sannazaro and Andrea del Sarto, preceded by that of Machiavelli in '27, Leonardo da Vinci in '19, Raphael in '20. Then in '33 dies Ariosto, Correggio in '34. The fertile period continues until 1559, when the peace of Cateau-Cambrésis confirmed the dominion and predominance of the Austrian house of Spain in Italy handed over to foreign lords, and may be said to end in 1565, a year after the Council of Trent, which effected Catholic renovation, suffocated freedom of thought and speech till then enjoyed—tolerated if not actually sanctioned. These last years in art were full of the old age of Titian and Michelangelo in literature, of the flower of the minor prose-writers. Guicciardini died in '40. Bembo in '47, Fracastoro in '53, Vida in '66. Torquato Tasso was born in 1544."

In the third volume of the critical edition of Tasso's Works (seventeenth volume of the "Library of Italian Writers," Bologna: Zanichelli, 1895), our poet prefaces the "Aminta" and "Torrismono" with a critical review and an appendix on the minor poems. Still, it is to his lectures one must revert to find Tasso's place in Italian literature, the ambient in which he evolved his poems, their reception by his contemporaries, their influence on future generations. After a tersely brilliant description of the fifth century in the other States of Europe, quickened by the confirmation of their separate nationalities by the Reformation and battles for freedom of conscience, he continues: "Italy had only her federal traditions and organizations. The whirlwind of religious passions that enveloped the German Alps failed to disturb the solemn quietude in which she elaborated the last development of her national and political organization, of her popular conscience in thought and in art." He shows the impossibility of the Reformation, as understood in Germany and England, taking root in Italy:

"Is it possible to imagine a Lutheran Renaissance in Italy, a Zwinglian Ariosto, a Puritan Machiavelli, a Calvinist Raphael, a Quaker Michael Angelo? Verily, no! the life and soul of Italy was federation in politics, rationalism in philosophy and religion, naturalism in art. What fault was hers if in those times she was the freest, most beautiful, the wealthiest, nay, the happiest of European nations?"

Then popes and emperors joined hands to crush her, their united forces barely sufficing. Crushed, strangled, finally, she was not violated.

"Tasso began to think and write at the moment when Latin Europe seemed bent on Catholic renovation in opposition to Protestant reformation. All Christian Europe felt its civilization menaced by the Ottoman Empire. The clash of the battle of Lepanto, that last great Christian battle in which the Italians took so large a part, the last glorious encounter between East and West, yet echoed from the seas. The time was opportune, and Tasso, well fitted to become the poet of Catholic renovation, of Christian civilization, gave Italy a religious and heroic poem, 'Jerusalem Liberated.' No other figure as serious and noble as Torquato Tasso did the sixteenth century produce. He is the legitimate heir of Dante Alighieri: he believes, and reasons out his faith philosophically; he loves, and comments love doctrinally; he is an artist, and writes dialogues of scholastic speculations which would fain be platonic; he innovates and theorizes. And, even as Dante, he ever finds something in himself which his Catholic conscience blames; a spiritual and moral allegory presides over his poem, which yet is essentially religious and chivalrous. Still he fears ever to have rendered it too profane, he rewrites it purified. Not even then content with his revision, he finishes with the 'Poem of the Creation.'

"He is the only Christian of our Renaissance, in which, however, he participates so largely that in his work sensualism blends with mysticism, and for this he grieves and repents while the people delight in it. But this two-fold element of his nature undulating between sensualism and idealism, between mysticism and art; this discord between the life he is condemned to live—he, the knight of the middle ages, the heir of Dante, mazed in the midst of the Renaissance between Ariosto and Machiavelli, Rabelais and Cervantes—of this two-fold element, this discord, he, innocent, suffers the penalty; suffers so intensely that it drives him mad. The wailing, heart-rending cry of the elegy which, athwart the chords of the epic trumpet, bursts sadly yet voluptuously from his heart, proclaims him the first in order of date among modern poets. Tasso has the malady of transitory eras, the malady of Chateaubriand, of Byron, of Leopardi. And thus, in discord with the times in which he lived, he was able to gather in his own breast the latest breath of chivalry and religion.

"It was the final attempt. After Tasso, neither the reaffirmation of ecclesiastical authority, nor the monarchical tradition which

commenced with the establishment of one powerful foreign dynasty in the south, another in the north, could succeed in exciting or reviving among us a chivalrous or religious movement."

This is Carducci's synthetical appreciation of Tasso's work. As the years go by, and Carducci's adoration for classical purity of form in which to express the wider aims and expanding horizons of the spirit of his own times is intensified, even as his spirituality increases, so also does his abhorrence of Roman Catholicism augment. His maledictions on the Vatican harpies "accursed by Dante and *through* Tasso cursed" proceed from his ever-deepening conviction that only to the greed and foulness of the Papacy, the constant summons of foreigners by the Popes, are due Italy's three hundred years of slavery and degradation. J. W. M.

BARRAS'S MEMOIRS.—II.*

PARIS, June 10, 1895.

BARRAS, after the reception he had had from Robespierre when he went to visit him on his return from Toulon, was convinced that he was doomed and condemned. There is nothing in his memoirs so dramatic as the history of his struggle with the Dictator, a true struggle for life. Robespierre, all-powerful at the Jacobins' Club, had almost ceased to go to the Convention, and it was on the benches of the Convention that Barras began to recruit his allies.

One day Barras was called to the Committee of Public Safety, as having been more particularly mixed up with the military operations. Fouquier-Tinville showed him a list of generals who were to be taken before the Revolutionary tribunal; on the list were Kellermann, Hoche, Championnet, and others. After a moment of stupor, Barras dared to defend these men. "Fouquier-Tinville," he says, "on hearing my observations, gave a nod of his head which showed complete assent. He took a pen from the table and struck off the names of these generals. It was the first time I had seen Fouquier-Tinville; his physiognomy, which I had represented to myself as sinister, his eyes, which I thought those of a tiger, assumed an air of humanity. . . . The Committee made up its lists every day, and he was only the executor. These lists were made up by the whole Committee, in a sort of tumult and without deliberation." Fouquier-Tinville showed him another list, of civilians classed as Girondins. "I saw on it the names of the best patriots." It is probable that Barras used the information thus received in order to increase the number of the opponents of Robespierre. He found his warmest allies in the persons of Tallien and Fouché, who were treated by Robespierre with marked contempt; he would never even speak to them, and "there was in the silence of such a man—of a man who held in his hand the sceptre of death—something more terrible for the imagination than open threats. The mysterious and awful Robespierre had turned everybody against him in the Executive Committee of Public Safety except his blind admirers, Couthon and Saint-Just."

Fouché, who was to play afterwards such an extraordinary part, had then made himself notorious only by his Terrorist measures in Lyons and in the South; he had been so cruel that Robespierre once told him that "his face was the expression of crime." He had been turned out of the Jacobins; he dared not show himself at the Convention; but "he rose early in the morning, and he ran about all day buttonholing Deputies of all opinions, and telling them all, 'You will die to-morrow if he dies not.' To the friends of Danton who survived, he said, 'To-morrow you can have your vengeance.' Robespierre's contempt for Fouché arose from the fact that Fouché had taken advantage of his proconsulate at Lyons to fill his pockets. He was one of the first who began to 'faire de l'argent' at a time when nobody thought of it, either from the effect of the Terror, which was not indulgent to robbers, or from a sentiment of true probity which was dominant among the citizens, occupied and preoccupied only with the defence of the Republic." It was said that at Lyons the *citoyenne* Fouché (an ex-nun who was living with Fouché) had carried away coffers full of things stolen in a convent. Fouché, notwithstanding the extravagance of his Terrorism, had incurred the displeasure of Robespierre; a note of his had been found addressed to a colleague in the Convention: "Before a fortnight, Maximilian will have ceased to exist, or we shall."

The crisis approached; on the 8th Thermidor Robespierre made in the Convention a vague, mysterious, and threatening speech, one of those utterances calculated to remind such of its hearers as had read Tacitus of the "longa et verbosa epistola" which Tiberius used to send to the Senate. On the next day, the 9th Thermidor, Vadier dared to open the attack. Saint-Just replied; Collot-d'Herbois, who had accompanied Fouché to Lyons, happened to preside—a vigorous man, capable of facing even Robespierre. He made it impossible for Robespierre to speak. The Dictator in vain called for the help of the "hommes purs"; the phalanx led by Fouché, Tallien, and Barras, called him "Tyrant! Catiline!" and would not allow him to speak. In vain did he scream finally, "President of assassins, I demand the floor." Can anything more dramatic be imagined than this struggle between assassins? A decree of accusation is voted against Robespierre, against Saint-Just, against a few others; the Dictator is arrested and "the terror inspired by his name is such that in two prisons whither he is transported, at the Luxembourg as well as at the Conciergerie, the doorkeeper refuses to open the doors." Robespierre had to insist he wished to be brought to trial; unfortunately for him, his partisans, hearing of his arrest, rescued him and brought him triumphantly to the Commune. Henriot marched against the Convention; the struggle now was between the Commune and the Convention.

Barras was appointed commander-in-chief of the troops in Paris; he confesses having felt at first some hesitation. "I say frankly that this sort of hesitation came from the knowledge which I had of the individual value of the men of the two parties. What was really the shade which distinguished the members of the committees who were hostile to each other? Did their feelings of humanity differ? What did Saint-Just and Robespierre have against Billaud and Collot? What did Collot and Billaud have against Saint-Just and Robespierre? . . . They were all equally guilty in their cruel and pitiless system against all human kind, in the perpetual use they made of the instrument of death against the most innocent creatures. . . . I really saw nothing which could determine a choice between Robespierre and Billaud." Barras says, however, that if the wickedness was equal on both sides, the more dangerous of the two was Robespierre, who had more prestige. "These tumultuous thoughts, which I now analyze with a cool head much better than I then could, induced me to make my choice as a soldier, and to march against Robespierre, to the death. . . . Death, and again death, was the necessary consequence of the struggle." To do him justice, Barras showed much resolution in the struggle. As soon as he accepted the command of the troops which defended the Convention against the Commune, with his little army he attacked the Hôtel de Ville, which was already then, as it was in 1871, the headquarters of the Commune. Barras accepts the legend of the suicide of Robespierre. "Robespierre, with one of the pistols of Lebas, had broken his own jaw." Many historians say that Robespierre was shot by a gendarme. *Adhuc sub judice lis est.*

When Robespierre, with Couthon and Saint-Just, was dragged before the Revolutionary tribunal, in order merely that their identity might be proved, great was the embarrassment of Fouquier-Tinville, the public prosecutor, "the man who, till that moment, even yesterday, used to go to take from Saint-Just and Robespierre orders of execution against all the unfortunate people whom they sent to the scaffold." Barras perceived his emotion. "'Well, Citizen Fouquier,' said I to him, in an imperious voice, 'the Convention has charged me with the execution of its orders. I give you the order to proceed at once to the execution of your mandate. To-day you must show yourself a patriot and send immediately the guilty to the scaffold.' Fouquier did not make me speak twice; he went to his room, took his little cloak, his hat *à la Henri IV.*, called the judges, gave them the fatal order against Robespierre, Saint-Just, Couthon, and their execrable friends, with as much decision as he did the day before when he received the order from Robespierre." Barras ordered that the car which took Robespierre to the Place de la Révolution (now called Place de la Concorde) should pass before Robespierre's house. "The prediction of Danton must be accomplished!"

The 9th Thermidor was a day of deliverance. Barras prides himself much on having immediately afterwards made a visit to the Temple, in order to see the unfortunate son of Louis XVI. and his sister. In his first version, written at the time, he says: "I found the young Prince in a cradle in the middle of the room asleep; he woke with difficulty. He had on pantaloons and a vest of gray cloth. I asked him how he was, and why he did not sleep in the big bed. He said that his knees were swollen and suffered at the joints when he was up; he liked the cradle better. I examined his knees; they were much swollen as well as the ankles and the hands; his face was swollen and pale." The rooms of the Prince and Princess were very filthy. Barras gave a few orders, but learned afterwards that they had not been carried out.

During the siege of Toulon, Barras had become acquainted with Bonaparte. After the 9th Thermidor he inquired for him and learned that he had left the army of Italy and was in Paris. He had made the acquaintance of the younger Robespierre and of Clarke, who was a clerk of the Committee of Public Safety. "I reproached him on the subject of his conduct, and told him that it was no longer the fashion of the day; that he must remain a patriot, but be less Robespierrist. Bonaparte answered me, 'At any price, I must have employment; if I cannot obtain some service, I will go and ask for it in Constantinople as an artilleryman.'" He desired to be presented by Barras to the Committee of Public Safety. A

* 'Memoirs of Barras, Member of the Directorate.' Volumes I. and II. Harper & Brothers. 1895.

struggle was preparing between the Convention and the sections, where the royalists had become very ardent since the 9th Thermidor. Barras organized against the sections a force composed chiefly of the men who had been imprisoned during the reaction which followed Thermidor. He had about 1,500 of these "patriots," and called them the "Sacred Battalion." The royalist sections were openly preparing an attack on the Government. Barras thought of offering a command to Bonaparte; he had some difficulty in finding him, and intimates that Bonaparte had been negotiating with the section of the Rue Lepelletier. When Bonaparte arrived, he said to him: "My positions are commanded by the officers who arrived first; you will be one of my aides-de-camp." He himself examined all the positions.

The struggle was not long; at the psychological moment, "Bonaparte, taking me by the coat, whispered, 'What is your decision, General?' 'Take to Brune the order to fire the guns.' 'All is saved,' answered Bonaparte; 'the victory is ours.'" The guns were fired in the Rue St. Roch, and the Church of St. Roch long bore the marks of the bullets. The members of the sections fled in all directions; the royalist movement was crushed without much difficulty. Barras showed on this day of Vendémiaire, as he had on the 9th Thermidor, much decision. There was something of the regular officer left in him. "We have," he says, "for the 13th Vendémiaire, posthumous historians who would give to their hero [Bonaparte] the sole glory of bringing about the 13th, as well as the gendarme Meda, historian after his death of his own acts, who finds himself making the 9th Thermidor by his intrepidity, conducting his troops against the Commune, entering there first, killing Robespierre with his own hand, exercising the supreme command on that day, all in compliance with an order which he had received from the Committee of Public Safety, an order which never existed." "I have said frankly, completely, all that Bonaparte did in person on the 13th Vendémiaire; he accompanied me in the morning, but he could not always accompany me, as I was on horseback and he was on foot, and it was only when I had the last orders to send that, fearing lest, with all his vivacity, he might not arrive in time, I had a horse given to him."

It has been said that when the sections were disarmed, a boy presented himself at Bonaparte's headquarters and offered the sword of his father, who had commanded the armies of the Republic; that this boy was Eugène Beauharnais, who became afterwards viceroy of Italy; that Bonaparte gave him back the sword of Beauharnais, and that the next day Madame Beauharnais came to thank him. Such is the accredited version of the first relations of Bonaparte and Josephine. Barras comes across this sentimental story. He knew Josephine, who belonged then to Madame Tallien's set; he recommended her as well as her son to Bonaparte, whom he had appointed *commandant de l'intérieur* in his own place. The visit of the boy to Bonaparte is, if we must believe him, a mere fable.

The Memoirs of Barras, although they have suffered various additions, suppressions, changes, and, so to speak, transformations, will be valuable to the historian when he comes to speak of the events in which he had to take a prominent part. His account of the 9th Thermidor and of the 13th Vendémiaire are the most important parts of the first volume.

Correspondence.

THE DIRTY DOG.

To the Editor of The Nation:

Sir: In your editorial of the 20th inst. your praise of the dog at the expense of the horse seems so unjust that I am led to say a few words on the matter. You speak of "the advantages enjoyed by the dog" as "man's friend and companion" and the intelligent co-operation thence developed. Allow me to ask if "the advantages enjoyed by the dog" have tended to diminish in the course of ages in the very least degree the filthy and disgusting habits of the dog, which ought by good rights to make him repulsive to every person that is endowed with any culture or refinement? Can one imagine a horse to be guilty of such outrages against common decency, even among animals? Other animals yield only to the pressing needs of the moment. Dogs jump at every chance to gratify a degraded and prurient nature. The dog is the only animal that eats his own excrement, and that from preference. Can one imagine a horse guilty of such an act? Yet it is the continual custom of the dog, and has ever been since he "returned to his own vomit again," as in the days of Solomon.

You speak of the intelligence of the dog. Have ages of familiarity with man succeeded in teaching him not to lie down in the middle of the street, instead of at the side? Have they taught him not to eat the hot biscuits and slabs of plum-cake that foolish masters and mistresses are always giving him? Have they taught him not to howl at night and rend the sky with discordant yelps and cries, compared with which the shriek of a steam-tug is melodious bliss?

There are no less than 174 lines in Shakspere in which the dog is mentioned, and in every case coupled with a contumelious epithet, from "blasphemous, incharitable dog" in the "Tempest," to "O Spartan dog! More fell than anguish, hunger, or the sea," in "Othello." All honor to Shakspere for his appreciation of the truth and his courageous tribute to the same. In the Bible we find the same opinion of the dog, from Moses to Christ, when he said: "Give not that which is holy unto dogs." In all literature it is the same. The dog is ever associated with the degrading and derogatory, from "dogged" and "dog's ears" to "doggerel" and "dog's-bane." To "go to the dogs" is to be irretrievably ruined, and "the dog-days" represent the condensed and hopeless misery of perspiring humanity. "The dog in the manger" is only equalled by those that "bark and bite, for 'tis *their* nature to."

Nature has made the dog a dirty animal in all his habits and sympathies. A pig is a sybarite in comparison. No ages of artificial and unnatural association will ever make him other than what he is, more filthy, more greedy, more annoying, and more repulsive than in that wild state into which he so easily relapses, and that without the least reluctance.—Pray believe me,

Yours with respect,

Howard Payson Arnold.

No. 156 Beacon St., Boston, Mass.,
June 22, 1895.

HOME-MARKET LATIN.

To the Editor of The Nation:

Sir: I see, by the latest issue of the *Nation*, that the Minister of Education for Ontario keeps on advertising, on this side of the boundary line as well as on the other, for a Professor of Latin for University College, Toronto. His obvious purpose is to obtain for the college the very best Latinist that the widest inquiry can discover for the salary offered. But suppose that "best" should prove to be not a Canadian, nor even an Englishman, and possibly an American! Nothing less than a symposium by those eminent internationalists, Senators Morgan and Lodge, and the diplomatic editor of the *Tribune*, could adequately express the abasement of feeling and conduct in the Minister of Education that alone could lead to such a climax.

Well! This is a Canadian question after all. We may rest in the serene confidence that our statesmen, mingling habitual patriotism with accustomed culture, can always be trusted to call for the primest specimen of American Latin, with total exclusion of the foreign article. C. F. B.

Washington, June 22, 1895.

MR. RILEY'S DIALECT.

To the Editor of The Nation:

Sir: In the *Nation* of June 13 (No. 1563), in the very interesting article entitled "The Novelist on his Travels," reference is made to James Whitcomb Riley's dialect poetry, and Mr. Maurice Thompson is quoted as saying that the people who speak it do not exist. He is very wrong; Mr. Howells hits nearer the mark. Mr. Riley says his poetry is written in the Hoosier dialect—hence it is distinctly Indianian; but it is more, for I have heard it spoken, precisely as he has written it, in southern and western Iowa and in some counties in eastern Nebraska. The two dialects are so similar that I was positively startled when I first began to notice them, and I greatly wondered at the trouble and study it had cost Mr. Riley to catch all those quaint tricks of speech. He is not just perfect, as Mr. Howells is quoted as saying, especially in the children's dialect; but he is so near it that we forego criticism.

Respectfully yours, T. G.

Council Bluffs, Iowa, June 21, 1895.

A MODIFIED GRIEVANCE.

To the Editor of The Nation:

Sir: I wish to apologize for the hasty and unwarranted criticism upon the *American Journal of Semitic Languages* (published in the *Nation* for June 6) and the gentleman referred to as its managing editor (although he is only an associate editor). I desire also to make the following corrections:

(1.) Four years ago I proposed to the gentleman above mentioned that he should join me in editing an Assyrian Dictionary. The proposition was declined. My former statement in the *Nation* that the proposition originally came from him was misleading.

(2.) I find that my statements concerning the review were incorrect. The proofs, as is evident from the supplementary note in the *Journal*—overlooked by me—were held for the revised edition, and the reviewer had both the first and second editions in hand at the time of writing. I desire, therefore, to withdraw all the reflections cast upon the managers of the journal in question.

(3.) I wish to state also that the first edition of my Dictionary was withdrawn at the suggestion of the above-mentioned gentleman be-

cause of the inconsistencies which he kindly pointed out to me.

(4.) I wish to withdraw the slurs implied in the use of the phrases "ostensibly written" and "cold-blooded attack."

Yours respectfully, W. MUSS-ARNOLT.

CHICAGO, June 22, 1895.

Notes.

LONGMANS, GREEN & Co. are preparing a series of English classics for use in secondary schools in accordance with the system of English study recommended by the Committee of Ten. Prof. G. R. Carpenter of Columbia will have the general editorship of them.

Chautauqua text-books for 1895-96 in the press of Flood & Vincent, Meadville, Pa., are 'The Growth of the American Nation,' by Prof. H. P. Judson; 'The Industrial Evolution of the United States,' by Carroll D. Wright; 'Initial Studies in American Letters,' by Prof. Henry A. Beers; 'Some First Steps in Human Progress,' by Prof. Frederick Starr; and 'Thinking, Feeling, Doing,' by Prof. E. W. Scripture.

Macmillan & Co. have ready the first of a series of contributions on philosophical, psychological, and educational subjects issuing at irregular intervals from the department of philosophy and education of Columbia College; and in press a history of the Seventeenth Lancers, by the Hon. J. W. Fortescue, and 'The Flower of England's Face,' by Mrs. Julia C. R. Dorr.

D. Appleton & Co. will publish this month 'The Story of the Plants,' by Grant Allen, and 'A Study in Prejudices,' by George Paston.

G. P. Putnam's Sons will bring out immediately 'Impressions and Memories,' by J. Ashcroft Noble; 'Earth Work out of Tuscany,' impressions and translations of Maurice Hewlett; and 'Israel among the Nations,' by Anatole Leroy-Beaulieu.

'Clan Traditions and Popular Tales of the Western Highlands and Islands,' collected by the Rev. John Gregorson Campbell (London: Nutt), will prove an acceptable addition to the folklorist's library. It forms vol. v. of the "Waifs and Strays of Celtic Tradition," to which we have already called attention. That part of the present volume which deals with clan traditions has the greater attraction of novelty; the popular tales of the other parts are variants of themes familiar to most readers in folklore. The introduction, by Mr. Alfred Nutt, upon the work and character of the collector, Mr. Campbell (now, alas, deceased), has also a scholarly value.

We are less favorably impressed with 'The Brehon Laws,' by Laurence Ginnell (London: Unwin; New York: Scribners). Various surface indications lead us to the suspicion that the writer is inadequately qualified for his task. How can any scholar of the present day assert (see p. 2) that "the originals [of English laws] in Saxon times were always in Latin," or that the records in legal proceedings continued to be written in Norman French "down to the middle of the eighteenth century"? Ireland and its literature have, it is true, been shamefully neglected in more ways than one; but it is scarcely good policy to try to awaken factitious interest in Ireland by underrating other countries. With the writings of Sir Henry Maine and the volumes of the Brehon Commissioners before one, it ought not to be insuperably difficult to present to the ordinary reader the general distinctive features of Old Irish law. But spurious Irish history is of no value except in a treatise upon comparative mythology. The present volume is not to be read with the implicit faith due to a legal treatise.

Prof. Alfred Wiedemann's little book on 'The Ancient Egyptian Doctrine of the Immortality of the Soul' (G. P. Putnam's Sons) will be of interest to several classes of readers—to the man possessed of curiosity as to the subject in general, to the comparative religionist who desires a concise statement of the Egyptian doctrine of man and his hereafter, and to the Biblical student who would compare his own belief with that of one of the most highly civilized and developed peoples of antiquity. For the specialist in Egyptology the work has little importance. It is brief, its statements are as clear as the subject allows, and the various matters included in the topic are set forth with sufficient fulness for ordinary purposes; but the author has not here made any appreciable addition to the fund of knowledge which we have already at our command. The chief value of the book consists in its being a convenient and lucid compendium. After a few remarks on the Egyptian religion, Prof. Wiedemann takes up the delineation of man and his component parts, which, according to Egyptian conception, were scattered at death, each one of them being, however, separately immortal in itself. The part played by each, and the process of their reunion in the completed celestial being, are considered briefly in the light cast upon the subject by native texts. The Egyptian eschatology is not very satisfactorily considered, but some curious beliefs are outlined. The work is a translation, and is well done. The translator has added a number of pertinent illustrations portraying a variety of funerary scenes and objects.

Two pamphlets come to hand which are worthy of a note of reference as authentic testimony on minor matters of interest in the civil war. The first contains an address before the Confederate Survivors' Association of Augusta, Georgia, by Gen. M. C. Butler of South Carolina. Gen. Butler gives his personal knowledge of the evacuation of the lines of Yorktown by Johnston's army in 1862, and fixes the interval before McClellan's forces became aware of the retreat. The second is a narrative by John Mead Gould, acting Adjutant of the Tenth Maine Volunteers (now cashier of the National Traders' Bank of Portland, Me.), giving in detail the circumstances of time and place attending the fatal wounding of Gen. Mansfield at the battle of Antietam, with an excellent map of part of the field. Both pamphlets are in the best vein of careful statement of matters within the personal observation of the writers at the time, that of Mr. Gould being scrupulously verified as to topography by subsequent visits to the battle-field. They are precisely the kind of evidence the student will prize.

Pierre Loti's 'Le Désert' (Paris: Calmann Lévy) is neither a novel nor an exciting book of any sort whatever. It is a languorously told, dreamy, ineffably fascinating, softly colored account of a trip in "the deep, sonorous desert" of Arabia Petræa. The peculiar charm of Loti's style is felt all through the book; the vagueness, the vaporousness in which he loves to enwrap his thoughts and the scenes he beholds, are over the whole of this volume. It is all the more interesting in that certain passages, taken in conjunction with the closing lines of the prefatory note, hint at a possible evolution in Pierre Loti himself.

M. Paul Hervieu is a literary artist, as every one knows who knows anything of contemporary French literature. But he has not given proof in 'L'Armature' (Paris: Lemerre) of striking originality in the choice of subject. He writes very well, he describes very cleverly, but we are so sick of that cosmopolitan society of immoral habits and filthy ideas that all the literary skill of the author cannot make us swallow another dose of the stuff without a protest.

A unique contribution to the prevailing Napoleon literature is John Grand-Carteret's 'Napoléon en Images' (Paris: Didot), consisting of a series of English caricatures of Napoleon I., chronologically arranged and extending from 1796 to 1816. Of these burlesque and satirical representations of scenes from the life of the victorious Corsican, 271 are described and 130 reproduced in facsimiles of the original drawings by Gillray, Rowlandson, Cruikshank, and other eminent caricaturists. The series begins with the marriage of Napoleon and Josephine, and ends with a sketch of the corpulent Louis XVIII. climbing a greased pole (*mât de cocagne*) in order to seize the crown of France. The obese Bourbon is standing on the shoulders of Austria, Russia, and Prussia, who are all three supported by England.

The Leipzig publishers Breitkopf & Härtel have issued a circular withdrawing from sale the German version of Präger's volume of reminiscences entitled 'Wagner as I Knew Him,' on the ground that many of the letters and other communications contained in the volume are not genuine, as has been shown conclusively by competent critics, and especially by the Vienna Wagnerite Chamberlain, in his strictures on the work printed in the *Bayreuther Blätter*.

We have received from Sheehan & Co., Ann Arbor, a 'List of Books recommended for a High-School Classical Library by a committee of the Michigan Schoolmasters' Club.' Any high school might be proud of such a library, little as it could or would be used on the more scholarly side.

While the literature of imagination and of sympathy with Japan is multiplying, it is good to note that the storehouse of regulative fact is easy of entrance. The Transactions and Proceedings of the Asiatic Society of Japan have now reached their twenty-third volume. They constitute a body of literature, unique in value, concerning man, nature, art, and literature in the chain of islands reaching from the Kuriles to Formosa. Under the auspices of the Council of the Society, Mrs. Garret Droppers has, with taste, industry, and ability, completed a general index of subjects and authors, with analyses and cross-references. Prof. B. H. Chamberlain leads the list of contributors. The corresponding secretary may be addressed simply Tokyo, Japan.

The Report of the Central Sanitary Bureau of Tokyo for 1891, just issued, compels contrast with the days not yet a full generation past when infectious, contagious, and hereditary diseases were rampant, and the population of Japan was, as to numbers, stationary. Certain diseases like smallpox tend steadily to diminish, but dysentery and syphilis are still persistent, and may be called national, though progress towards thorough control is being made. Besides abundant facts of interest, we note the care exercised in thorough governmental inspection of patent medicines, of food-products and their coverings, and of the linings of cooking-vessels, as well as in licensing practitioners in medicine and salesmen of drugs and chemicals.

The leading article in the Leipzig *Deutsche Medicinische Wochenschrift* for April 25 gives the results of a long series of clinical experiments conducted by Prof. Rudolf Emmerich and Dr. Hermann Scholl for the purpose of curing cancer by means of *Krebsserum* or *Erysipelserum*. During the last ten or twelve years physicians have repeatedly noticed the remarkably sudden alleviation and rapid healing of carcinoma and sarcoma in consequence of the intercurrence of erysipelas. These observations indicated that in the struggle for existence between pathogenic micro-organisms, the microbe of erysipelas attacks and destroys the microbe of cancer. In 1886 Prof. Emmerich proved also that the microbe of milzbrand or anthrax (*Bacillus anthracis*) is effectually checked in its ravages by the microbe of erysipelas (*Streptococcus erysipelatis*) and the disease healed within forty-eight hours, and sometimes even sooner. The *Krebsserum* or specific for cancer is procured by bleeding a sheep infected with a pure culture of the microbe of erysipelas, and preserving the blood for some time in a sterilized vessel; the microbe is then eliminated, and the residue of blood-serum is the aforesaid specific, which has been applied by Prof. Emmerich to six cases of advanced and aggravated cancer in Munich, Bavaria, apparently with complete success. Whether in these inveterate cases the disease has been wholly cured or only temporarily checked, it is as yet impossible to determine; but Prof. Emmerich is firmly convinced that his serum will prove to be an infallible remedy for carcinoma, sarcoma, and all kinds of malignant scirrhous tumors, if taken in their early stages.

Petermann's Mitteilungen for May opens with an account of the ascent of two of the principal volcanoes of Guatemala by Dr. K. Sapper. A paper upon the earthquake of October 27, 1894, in Argentina describes it as purely tectonic, no trace of volcanic disturbance having been discovered. The editor notices favorably the projected balloon voyage to the North Pole of S. A. Andrée. From the paper submitted by the latter to the Swedish Academy, success appears to depend upon the fulfilment of four conditions: the balloon must be large enough to carry three persons, ballast, instruments, and provisions for four months, and be capable of remaining suspended at the height of 250 metres for thirty days; it must be inflated at some point in the arctic regions, and have a steering apparatus. The car is to have a dark-room for the purpose of developing photographs. It is proposed to start from Spitzbergen in the summer of 1896, and the projector hopes to reach the Pole in forty-three hours. The plan is not that of a mere visionary, but one carefully considered and based on scientific principles. Herr A. Nobel has contributed $5,000 towards its expenses, and it is also stated that King Oscar will subscribe $7,500.

The title "Abenddämmerung," given by Franz Xaver Kraus to his article on Maxime Du Camp in the *Rundschau* for May, might easily lead the reader to turn the pages too hastily and thus lose some bits of information concerning the Prince Napoleon, General Boulanger, and one or two other historical personages. The story of Cardinal de Bonnechose's twice-repeated offer of the imperial crown to the Prince, in exchange for a promise of his support to the papacy, and of the Prince's categorical "Je ne veux pas," the writer of the article believes has never been made public. Boulanger's postprandial "give-away," "Eh bien, je ferai la noce," in reply to the question what he would do when he had become Emperor, was the springing of a trap which Du Camp, with the aid of a lady friend, had set for that pretender.

The *Archivio Storico dell' Arte*, which, for want of subscribers, threatened to founder, has reappeared triumphantly with the first number of a new series containing several interesting articles and documents. The most important contribution is one by Signor Supino, who, after a careful study of various descriptions dating from the 15th century, comes to the conclusion that Giovanni Pisano's pulpit in the cathedral of Pisa orginally was supported on eleven columns, and only *one* sculptured group. The remaining groups, which, if they formed part of this pulpit, would in truth make it grossly over-elaborated, Signor Supino ingeniously proves on both documentary and stylistic grounds to have belonged to the tomb of the Emperor Henry VII., begun in 1315 by Giovanni Pisano's pupil Tino di Camaino, and to have been added to the pulpit during the rearrangement of the cathedral and its monument that took place at the end of the fifteenth century.

In the *Gazette des Beaux-Arts* for June Mr. B. Berenson calls attention to the magnificent Botticelli discovered last winter in the private apartments of the Pitti. He describes the picture, which represents, in life size figures, a goddess taming a centaur, as a political cartoon painted to celebrate the triumph of the Medici and their good government (clearly symbolized by the goddess) over the Pazzi and their mad attempts (as clearly symbolized by the centaur). Besides its importance as a work of art, being in fact inferior to none of Botticelli's works, it is invaluable as furnishing a further and much-needed point of departure for the study of this great Florentine's evolution.

The present month has been signalized by the launching of two noteworthy enterprises in French periodical literature, which appeal, one indirectly and the other directly, to foreign readers. We name first the *Revue pour les Jeunes Filles*, issued on June 5 by Armand Colin & Cie., 5 rue de Mézières, Paris. This is a very handsome magazine, without illustrations, and having a serious aim to encourage profitable reading among French girls, who, say the projectors, are deplorably unused to cultivate their minds in the years between school and matrimony. Fiction, humor, poetry, art, travels, female education, employment for women —such are some of the ingredients of this *Revue* as already shown in the first number. The contents will be scrupulously clean.

The second venture is a *Revue Franco-Américaine* (New York: International News Company), which so far falls in line with the foregoing that it professes to honor the American "conviction that a man should not read the tales he will not let his daughter read." This magazine too is very handsome in its typography, but it is also freely and elegantly illustrated, each department by a single hand, with Caran d'Ache for the "Fantaisies," in addition to half-tone views of the several contributors in their respective studies, etc. This gives us portraits of Tolstoy, Clémenceau, Daudet, Catulle Mendès, Mallarmé, Paul Adam, etc., etc. The contents are hard to define, and the physiognomy of the *Revue* not seizable at a glance.

As the *Portfolio* is a periodical consisting of monograph issues, so *American Politics*, announced by Charles H. Kerr & Co., Chicago, will in each number be devoted to some one "important study of live political issues." Silver will be the theme of the first three numbers.

At this year's Presentation day of the University of London, the Lord Chancellor of England, who is also Chancellor of the University, was called on to recognize an unusually large contingent of women, many of them being on the honors list. Miss E. A. S. Dawes (Girton College, honors in classical tripos, examinations for women, Cambridge) was the first woman to receive the degree of Litt.D., being presented to the Chancellor by the University's first recipient of that degree, Mr. R. F. Weymouth. Another woman, Miss F. Higgins, was announced as the first feminine bachelor of music, having two male colleagues. Of the 253 bachelors of art, 80 (or nearly one-third) were women, while women students received 8 of the 29 M.A., 10 of the 81 B.Sc., 8 of the 77 B.M., and 10 of the 47 M.D. degrees conferred. Of the five "honors" granted in the arts, theory, and history of teaching, the majority (three) were women teachers.

It is announced from Berlin that Dr. Bosse, the enlightened Minister of Education for Prussia, has just sanctioned the admission of the daughter of an ecclesiastic to the "Abiturienten" examination at the Prussian Gymnasium. As the Minister's decision overruled that of the provincial pedagogic board which refused the application, it has an important bearing on the future status of the higher education of women in Prussia; this *Abiturienten-examen* being the "open sesame" to every German university, "and to other privileges in certain professions," notably medicine.

We are reminded that Dr. Bosse last May issued regulations for the examination of women candidates for the title and post of head teacher (*Oberlehrerinnen-examen*), which posts had been entirely monopolized by men; it was at the same time provided that in future, in all girls' schools of which the principal is a man, a woman must be associated with him in the management, and that a woman should have charge of at least one of the three upper classes. The conditions of admission to this higher women teachers' examination are a certificate of having passed the "Lehrerinnen" (or ordinary female teachers') examination, "and having taught five years since." But, as the examination includes no Latin, Greek, or mathematics, naturally it could be no substitute for the "Abiturienten-examen." Friends of women have come forward with funds for starting (in Berlin, Leipzig, Carlsruhe, and Munich) gymnasia or classical schools for girls, which should supply the necessary instruction in classics and mathematics.

—Of the 806 pages which make up the fifth and concluding volume of Mr. Larned's 'History for Ready Reference and Topical Reading' (Springfield, Mass.: C. A. Nichols Co.), 424 are devoted to the United States. The remainder are occupied mainly by a "Supplement," containing, besides a number of chronological and genealogical tables, "some passages translated from German and French writings, touching matters less competently treated in the body of the work, where the compilation is restricted to the literature of history in the English language." Some of these are so greatly superior to the articles in the body of the work that it is to be hoped that the editor and publisher will prepare a slip to be pasted into the first volume advising their readers of the "more competent" treatment of certain topics to be found later. There is also a selected Bibliography, with annotations from Freeman and others, which seems on the

whole well done, though we do not observe in any of the lists either the 'Deutsche Verfassungsgeschichte' of Georg Waitz or the 'Histoire des Institutions Politiques de l'Ancienne France' of Fustel de Coulanges—both of them "epoch-making" works in their different ways. This concluding volume does but confirm the opinion we have already expressed as the earlier ones appeared. The compilation witnesses to a great deal of intelligent drudgery, to catholic interests, and to a painstaking struggle towards completeness. To the real scholar it will occasionally be convenient. It may—we hope it will—contribute to the diffusion of information among the general public; certainly every newspaper office ought to possess it. But it is full of danger for the college boy and college girl. "Topical" reading (if we could only get over the adjective, which reminds us too much of "topical" songs) had, at any rate, this advantage—that in digging out bits from really considerable historians there was always a chance that the reader might be compelled or attracted to read a little more than the bit he was in search of. Coming for mere information, there was just a chance he might find inspiration. But now that the bits of information are already picked out, the reader may think he has nothing further to do than to look in Mr. Larned's volumes under the proper letter of the alphabet. So expeditious a method strikes most people, perhaps, as business-like; but we think that after all we should prefer to increase rather than diminish a lad's temptation to browse over Gibbon and Grote and Mommsen for himself.

—In reprinting 200 copies of a 'List of Early American Imprints belonging to the Library of the Massachusetts Historical Society' from the Proceedings of that society, its author, Dr. Samuel A. Green, has conferred a distinct benefit, not merely in the preparation of the list, but also in putting it into this more accessible form. Though the title does not say so, the list is practically limited to Massachusetts incunabula printed between 1643 and 1700, not half-a-dozen of the 308 titles given having been printed outside of Cambridge and Boston. So limited, the list is naturally largely made up of the curiously half-political theology of the period, which found its chief political function in the election sermon, and shaded from that by indefinable gradations into the catechisms which were prepared by request of the General Court, in the hope that religious unity might in turn produce a united policy in civil affairs. The Mathers come first in this list, Cotton being represented by 31 titles and Increase by 30; Willard contributed 20; and then, in various numbers, Chauncy, Danforth, Lawson, Norton, Oakes, Sewall, and Shepard make up the remaining bulk of this class. Of books falling outside of this category, the almanacs and laws constitute more than one-half, but there are stray examples of a more literary character, poetry having its representatives in Wigglesworth and Bradstreet, biography in Norton's 'Life of Cotton,' and history in Mather's 'Brief History.' Even in science we find the earliest American medical treatise, 'A Brief Rule to guide the Common People of New England, How to order themselves and theirs in the Small Pocks, or Measles' (1677); and Mather's 'Essay on Comets' (1683). The morbid tendency of the Puritan mind finds exposition in an 'Arrowe against Profane and Promiscuous Dancing,' in several works on witchcraft, and, with unconscious humor, in a work on the Quakers entitled, 'Little Flocks Guarded against Grievous Wolves,' which is somewhat reversing the commonly accepted ideas of the relative character of the "Independents" and the "Non-resisters." In contrast, the finer qualities of these same Independents are markedly shown in the large production of books intended to Christianize the Indians, and in Sewall's 'Selling of Joseph'—the first printed New England protest against slavery, though that iniquity had been already "testified" against by the Quakers of Philadelphia. No copy of the 'New England Primer' and no early copy of the 'Bay Psalm Book' are given in the list, which are pitiful gaps in so distinctive a New England collection. The collations and notes are careful and lengthy, and a title-index is added.

—A few weeks ago it was announced that Nicolaus Oesterlein of Vienna had sold his Wagner Museum for $20,000, and that it was to be transferred at once to Eisenach, where a special building has been purchased for it, and Herr Kürscher, the well-known Wagnerian scholar, secured as curator. The Wagner Museum, which includes valuable manuscripts, books, pamphlets, newspaper articles, photographs, busts, and all sorts of curios, is perhaps the most extensive collection of its kind in existence. If any one doubts this, let him examine the four volumes of Oesterlein's catalogue ('Beschreibendes Verzeichniss des Wagner-Museums in Wien'), of which we have just received the fourth volume from Breitkopf & Härtel. These four volumes enumerate all the objects gathered in the Museum, to the number of 10,387, but only those belonging to the years 1813–1883, leaving those relating to the years after Wagner's death to be catalogued by the new curator. Oesterlein's classification is rather over-elaborate, but otherwise his volumes are of extreme value to future essayists and biographers. By way of making his catalogue more interesting, he has quoted a few pithy sentences, here and there, from newspaper articles difficult of access or from manuscript letters. Thus we learn (p. 45) that the famous *al-fresco* performance of "Lohengrin" on the lake of Starnberg before the King's palace, where a real swan was used, was not planned by the romantic Ludwig, but was arranged by the bandmaster as a surprise for him. He liked it so well, however, that he had it repeated the next evening. In one of his annotations Oesterlein gives the information that Wagner's fifteen letters to Frau Wille, which contain such interesting details of the romantic friendship between the composer and the King, are now accessible in book-form (Berlin: Paetel).

—The *Journal of Hellenic Studies* for 1894 (Vol. 14, part ii.) offers a highly important dissertation, by Mr. Arthur J. Evans, on "Primitive Pictographs, and a pre-Phœnician script from Crete and the Peloponnesus," the substance of which was read before the British Association last year, and was summarized in the *Nation* of September 20, 1894. The number of symbols is now increased to eighty-two, and of linear characters to thirty-two. The abundant illustrations and comparative tables of symbols which accompany the article make clear at a glance the interest and novelty of Mr. Evans's discoveries. The tables illustrate the process of transition from pictographs to linear hieroglyphics, which are apparently the ancestors of the Cypriote syllabary, and are, in some characters, identical with it. Some of the forms seem also to have influenced the Phœnician alphabet, as well as the type of certain archaic Greek letters in Cretan inscriptions. This Aegean or Mycenæan system, though containing occasional resemblances to Egyptian hieroglyphs, was evidently developed independently of Egypt; it was in the first place framed to fit some Semitic group of languages, but later became the common property of the Mycenæan civilization, and of Hellenic tribes on the coasts of the Aegean. We can hardly err in referring to it the "deadly characters" (*Iliad*, Bk. vi., line 169) which Prœtus traced in a folded tablet to be carried by Bellerophon to the King of Lycia.

—Other articles of interest are Mr. E. A. Gardiner's proposed restoration of the paintings by Panænus on the throne of the Olympian Zeus, and Mr. A. G. Bather's ingenious explanation of the myth enshrined by Euripides in the "Bacchæ." In this play, and in the legends generally, the cult of Dionysus is represented as coming from abroad, from Thrace and from Asia Minor. Mr. Bather, however, recalls the fact that the worship of a vine deity was indigenous in various parts of Greece, and maintains that, in later times, this native deity became identified with the stranger from Thrace and the East. The Pentheus who, in the "Bacchæ," is dressed in woman's clothes, suspended from a tree and subsequently torn in pieces by the Mænads, his head being carried home in triumph, is no other than the image of the vegetation deity of the old year, borne out of the village, treated with indignity and stoning, and replaced by another figure of the new god, which is carried back in procession from the woods. From the custom of the annual inbringing of the new deity is derived, as Mr. Bather reasons, the myth of the introduction of an alien Dionysus. When a myth is perpetuated by a festival, we may assume in general that the ritual is older than the myth, and indeed gave birth to it. Now every one of the details just mentioned in the story of Pentheus is paralleled by modern folk-customs connected with May-day festivals in Russia, Bohemia, Lusatia, and Italy—in fact, from one end of Europe to the other. The spirit of them all is expressed in the song of the Bohemian maidens: "Death we draw out of the village, Summer we draw into the village"; and this is the meaning of the mummery of Pentheus. He is the old god carried out of the city; he is sacrificed as a scapegoat for the people, his head is nailed upon the triglyphs as a talisman against evil spirits. He is represented either by an actual human victim, or else by a lay-figure dressed as an old woman; after this is pulled to pieces, the women search in the woods for a new Dionysus, and carry his statue to the village. It is not, of course, pretended that Euripides himself knew he was describing a primitive religious rite; his mind was occupied with the myth, its human pathos, and its ethical significance.

ROMAN AFRICA.

L'Afrique Romaine: Promenades Archéologiques en Algérie et en Tunisie. Par Gaston Boissier. Paris: Hachette et Cie. 1895. Pp. 322.

SINCE the appearance in 1812 of Eustace's 'Classical Tour in Italy' there has always been a demand for books connecting scenes of modern travel with whatever in ancient history, archæology, and classical literature refers to the places visited, or may be grouped about them. Gaston Boissier (for he has reached a position where, in his own country, it is a tri-

bute to drop the "Monsieur") has written several such books, which have been deservedly successful and have become a sort of superior Baedekers for cultured tourists. It is not easy to surprise the secret of their composition. Boissier always approaches his subject with a superabundance of material. He has not merely an endless capacity for delightful talk, but far more facts, and thoughts upon them, than suffice for his purpose; and he has that fine French tact which knows just when the reader will need a change, either of subject or of treatment. He aims at supplying something for all refined tastes, without becoming irksome to any; in short, he embodies in his work the golden rule of *ne quid nimis*. So much is clear; but the practical carrying out of such a purpose lies not in every man's hand to do.

The reader will not long remain in doubt in what field Gaston Boissier is most at home and most delights. When he is treating of archæology or history, we acknowledge that he is laying before us, most attractively and faithfully, the latest results of archæological or historical studies. He is wonderfully "up to date," and he shows at once a masterly grasp of the whole subject and a surprising familiarity with minute details. But in this field he is no originator; and his chief merit is that the authorities whom he frankly follows are sure to be the best, and the material which he borrows is always the most effective for his purpose. It is needless to say that he gives credit to his authors for what he borrows, and not only to the famous ones—the Mommsens, the Tissots, the Cagnats, the Perrots—but also to the humble army officers and employees who have done so much for archæology in Africa. On the other hand, when he enters the field of classical literature, we have before us an original thinker familiar with the whole ground *a teneris unguiculis;* and we find here in abundance precisely those personal and independent contributions to the subject which we miss in the other field. Whenever he finds his opportunity to do a bit of pure literature, whether *ex professo*, as in his chapter on African literature, or incidentally, as when he describes some beautiful site like Constantine or Cirta, or where he inserts one of his graceful historical cameos, the tragic death of Sophonisba, or the romantic history of Cleopatra's daughter Selene, or the grewsome duel of Juba and his friend Petreius, he exults in conscious power, and quickens his pace like an old war-horse at the sound of the clarion.

One feels inclined to wonder, or even to regret, that the writer should approach the archæological side of his book in a spirit so humble as to suggest an intentional abstinence from all original work beyond the mere selection of materials and their artistic arrangement. Thus, when he is noting the exceedingly mixed character of the present population of North Africa, he seems to forget what must, nevertheless, have been in his mind, that, long before Tissot or Mommsen, Voltaire had made his *Ramire* say to the African Princess, *Zulime*,

"Je sais qu'en vos climats
Où vingt peuples mêlés ont changé tant d'États," etc.

Again, when, on page 197 of this book, he mentions the curious fact that the municipal officers in Roman Africa paid heavily for their places, and had office thrust upon them often in spite of their best efforts to avoid it, we might expect some reference to the younger Pliny's correspondence with Trajan on a similar state of things in Bithynia, of which the inscription from Miletus, just published in the *Revue de Philologie*, gives such an interesting example. And so, when he speaks of the provincial origin of the cultus of the emperors, we are a little surprised to find him modestly stating as an inference what he might have proved by the authority of the third book of the 'Annals' of Tacitus. But on further examination we see that the author has gauged his own powers with consummate good judgment. It is in the archæological department that Boissier is vulnerable, and he does wisely to rely upon others. His literary bias is itself a hindrance to him, for it inclines him to follow fancy rather than cool judgment. Thus, for example, when, on page 29, he sees in the mausoleum of Juba II. and Cleopatra a combination of Greek and Egyptian architecture and a touching reminiscence of the two nationalities dear to the fascinating daughter of the great queen of Egypt, the sober archæologist will be more likely to see in the monument, as Boissier describes it, just what we might expect *a priori*—a somewhat modified imitation of the mausoleum of Augustus at Rome, of which, to be sure, the precise form is not known to us, but which must have corresponded with this ruin in its general character. Again, when a certain anti-Semitic prejudice leads him (p. 39) to attribute the building of a stronghold like Carthage to the hatred inspired by the Phœnician traders, does he not forget that every nation which has traded with uncivilized countries has found it useful to establish factories and to fortify them against a sudden attack from natives who would rather steal than buy? It is this same somewhat romantic bias that leads our author to seek in the independent spirit of the indigenous Africans an explanation of the fact that no Romance language remains in that province as a memento of the Roman occupation. The parallel cases of South Germany and Britain seem to prove that the true reason lies in the incompleteness of the conquest relatively to the mass of the people speaking substantially the same tongue, especially when that language belongs to a different family from the Latin, as is the case with the Berber dialects.

And, lastly, to dismiss the chapter of fault-finding, this book is not free from a defect too common even in the most serious manuals of archæology, a lack of perspective. If a biographer should jumble together what happened to his subject at times distantly remote, we should be greatly shocked at such a proceeding. But when the average archæologist says that "the Ancients" did thus and so, all ages of antiquity are too often projected, as it were, on one and the same plane, and we cannot even feel quite sure that he has not taken out of Plautus or Terence, as a Roman custom, what is there merely because it is Greek. Thus, on page 93, in reference to the year 42, the *procurator Cæsaris* is spoken of as bearing the official title of *Egregius*, which was certainly true in the age of Constantine and as certainly not true in the age of Caius.

This latest work of Boissier's differs from its predecessors in having a political side. The author justly thinks that, in their efforts to solve the problem of Algerian occupation, the French should endeavor to learn something from the Romans, who, with a force of 27,000 men, held a larger territory than that which the French can barely keep in subjection with an army of 48,000. He shows how those wise old Romans allured the savage by the display of elegant and sumptuous civic architecture at the very outposts of civilization, whereas the towns built in Algeria by the French are conspicuous only for their utilitarian ugliness and sordid vulgarity. He shows from the very interesting researches of Cagnat how, under this far-sighted policy, a family of natives (the example is taken from the ruined city of Cillium) abandoned their barbarian names for Roman appellations in the course of three generations, the grandfather calling himself Masac, one of his sons Saturninus, and the grandson blooming forth into the full Roman name of Flavius Fortunatus. The author finds in religion one strong reason for the difficulties experienced in so much larger measure by Christian nations in similar endeavors. This is reasonable enough, and the wonder is that the author has made no use of such confirmatory instances as might have been found in the Gentile occupation of Judæa and in the relations of the Romans with the Druids.

The reader will not find in this book a continuous history of the African province. No notice is taken, for example, of the religious troubles of the fourth and fifth centuries, although the author's observations come down to the Vandal conquest, and the Donatist disturbances must have caused much of the existing desolation and may certainly be regarded as a large factor in the success of the Vandal invasion, or indeed as the original cause of it. What there is of history in the book is there for literary purposes; and those episodes alone are made prominent which offer an opportunity for artistic treatment. It is perhaps no longer very high praise to say that Boissier, while he properly trusts Mommsen for his facts, has discovered, like most students of history, that the political bias of the learned Berlin professor makes him an untrustworthy guide beyond the mere verification of facts, even when it is not easy to detect the connection between his conclusions and the underlying prejudice. But we may add that when our author allows himself an original generalization in the historical field, he gives evidence of large views and great synthetic ability.

We have considered this book from the point of view which its title suggests. The literary part will be relished by all readers of taste; but an adequate discussion of it would call for a separate article. There is an index to the volume, and four plans, two of Carthage and two of the Roman city of Timgad (Thamugadi), the ruins of which have been studied with care. These plans are carefully designed, but rudely executed, in marked contrast, for example, with the accurate and elegant maps in Mommsen's 'Roman Provinces'; and, as is usual with the majority of French books, even those issued by the best houses, the volume before us is marred by typographical defects which an American publisher would regard as a disgrace to his name.

McMASTER'S HISTORY.—II.

A History of the People of the United States, from the Revolution to the Civil War. By John Bach McMaster. Vol. IV. D. Appleton & Co. 1895. Pp. xiv, 630, maps.

THE influences of paper issued upon little or no credit were at work in many directions, and the connection is not appreciated by Mr. McMaster. The readiness to take chances was fostered by the facilities of obtaining credit and getting beyond the punishment due to bad faith. Conditions in Europe, where the armies of the Napoleonic wars were being disbanded, led to a great movement in population to America. The rapid rise of communities in the Western country was an immediate result; a secondary effect was the demand for better

means of communication between the East and the West, and a recognition of the political influence and commercial importance of the Mississippi Valley. If an individual could "create" wealth by issuing his paper, the State could do the same; and, as the guardian of all, the State was bound to employ its power for the benefit of its citizens. From this followed a wish for the State to undertake what had hitherto been performed by local or individual efforts. Immigration was to be assisted and encouraged by grants of lands; States were to enter into extensive schemes of internal improvement, involving the expenditure of vast sums of money on the betterment of roads and the construction of canals. The Federal Government was to enter into this work, either directly by the construction of post-roads, or indirectly by grants of money to the States. The readiness with which schemes could be floated on paper credit—and even the national loans were paid for by local issues—greatly encouraged those political statesmen who sought to build up local influence upon national bounty. The manufacturers believed their interests to be a proper subject of national care, and in 1816 the first really protective tariff was urged upon Congress.

Mr. McMaster has largely drawn the material for his chapter on this tariff from the "Address of the American Society for the Encouragement of Domestic Manufactures to the People of the United States." This is very much as if the recent bond sale for gold was to be described by the aid of "Coin's" financial untruths, or by the speeches of the extreme advocates of silver. It is unfortunate that, in so important a matter, the author should expose himself to the suspicion of special pleading. The close of a war which was distinctly a commercial war, following closely upon years of trade hampered, and at times almost destroyed, by hostile measures of England and France, would in itself be sufficient to explain an unusual movement of export and of import. The decrees of Napoleon and the British Orders in Council, enforced as they were by blockading fleets, shut in domestic and kept out foreign products and manufactures. Naturally domestic industries arose. These restrictions removed, the tide of trade swelled in both directions; and as if to make good in a single year the long deprivation of markets, merchants, domestic as well as foreign, overtraded enormously. Mr. McMaster draws a harrowing picture of over-importations of British goods into the United States, of the tricks of importers, of the extent and evils of the auction system, and of the dangers threatened to such industries as had sprung into existence or had been encouraged to expand during the war. He points out the losses of the American manufacturer and the American merchant, setting against them the gains of the foreigner. Following his main authority, he believes them to have been the result of a studied policy on the part of England to crush out the manufactures of the United States. He includes a sentence from one of Lord Brougham's speeches to this effect, which has done service in every tariff contest in the United States from that time to 1888, when, though genuine, it disappeared with sundry forged extracts from English papers.

Had the writer looked into any account of the situation of industry and commerce in England at this time, he would have been quick to recognize not only how impossible such a policy was, but how severely the merchants and factors of that kingdom suffered through those very exportations. An expectation of the opening to trade of the continent of Europe had led to overtrading in 1814, and the disastrous effect of the extravagant speculation led to numerous failures in 1814-1816. The same miscalculations were made in the American trade, and exports of manufactures were encouraged by the abundance of labor, by the progressive employment of machinery in nearly every branch of production, and by lower freights and lower insurance, no longer at war risk. That "the bulk of the commodities exported brought very inadequate returns" was the general conclusion of the English exporter. In the United States other conditions favored overtrading. Prices were high, because expressed in paper money; the banks favored speculation, and merchants believed in the existence of an unlimited market for foreign commodities. Miscalculation and inflated credit are sufficient to explain the situation. The plea of the manufacturer was based upon selfishness, and was only a part of the current opinion of the day—that the Government should make good the errors of unrealized hopes. The influence of Pennsylvania upon protection to native industries has been great, and it will not be the first time it has proved sufficient to color historical writing.

A national bank was authorized in 1816 with the hope of introducing some system and order into the currency. This hope could be realized only by crowding out State issues. The Bank of the United States opened its branches in different States and supplied a circulating medium that was redeemable at any branch. It accepted notes of such State banks as promised to redeem their issues in specie, and then demanded their redemption. This brought pressure upon the State banks, and they in turn called in their loans, and so brought the crisis to the individual farmer, who had mortgaged his farm, and merchant, who had traded on credit. A popular outcry against the Bank of the United States vented itself in attempts on the part of State Legislatures to restrict and intimidate this bank in the expectation of neutralizing its efforts.

The long period of paper promises had blunted the general ideas of honesty. Resort was had to stay and replevin laws—measures that aggravated instead of curing the evils complained of, for they struck at the origin of all credit. In the cities the suffering was the most intense, and the subject of pauperism and its causes forced itself on the public notice. Commissions reported a great increase of the poor, and the charitable, in answer to their appeals, opened soup kitchens, gave money and clothes freely, and in the end almost offered a premium on idleness and begging. Foreign immigration was looked at askance. Intemperance was pointed out as the leading cause of pauperism, but the share of gambling, lotteries, and ignorance was recognized. The remedies suggested were many, and among them schools, restrictions of dramshops, and savings banks. A wave of reform passed over the land. The pitiable condition of debtors, whose situation could hardly be made more miserable than it was, and the demoralization of the prison system, in which the corrupting influences more than compensated for any benefit to society from the punishment of the criminal, were fields demanding the best exertions of those interested in the welfare of the community. The cruelties of imprisonment for debt were mitigated, but the idea of reclaiming and reforming rather than punishing the criminal was not yet accepted as the true basis of a penal system. In such a "moral awakening" were established Bible and missionary societies, and the free blacks were to be colonized somewhere without the United States. The contest over the admission of Missouri into the Union brought the people to the realization of a sectional conflict on slavery which filled them with dire forebodings for the future.

So far as the general reader can determine, errors of statement on the part of Mr. McMaster are few. Proper names suffer not a little. Huddy is spelled Huddie, and Conyngham is printed Connyngham. The maps do not correspond with the text. For example, the following differences are shown, the spelling in the text being given first: Rameau and Ramea; Epervier and Epervior; Coosa and Coosee; Talladega and Talladagee. There are some tricks of expression which might be omitted, as they tend to exaggerate or to give a wrong impression. "Swords without number" could hardly have been voted to Perry; nor does a town-meeting give expression to the political beliefs of the population of a State; nor is it true to speak of Liberia as going "steadily forward on a prosperous career."

The errors of method are more notable. In giving to each subject a chapter, the connection of events is destroyed, the continuity of narrative marred, and the relation of cause and effect obscured. The chapters read as if they had been prepared for a magazine—essays on special topics, afterwards thrown into a volume with a slight connecting bond. It may be questioned, too, whether history can be written from the ephemeral productions of the day, such as proclamations and addresses, or the average communications to the daily press. Like a party platform, they are produced for a certain purpose. They constitute an appeal to passion rather than to reason, and, too often concealing the real motives of political agents, are not fit expressions of public feeling. It is true they lend themselves to Mr. McMaster's mannerisms, and enable him to produce a very readable and at times truly novel chapter. But history demands something else. The prominent actor, the leader or moulder of public opinion, is an important feature. Personality is an interesting and a truly vital force, lending a vivacity to the story which no tricks of style can give. With Mr. McMaster the person counts for little. Madison, Monroe, Gallatin, Clay, and other prominent leaders of the day are introduced as puppets; their names occur at intervals, but there is no attempt to analyze their motives or their characteristics. The summaries of their speeches are made in a perfunctory manner, and lose the glitter and force of argument which they have even in the mangled condition in which they have come down. It may be questioned whether Mr. McMaster's work will be accepted in the future on any other ground than for its extensive research and studies of particular incidents. As a history it falls short of what has been done before in this period, and certainly short of what should be demanded in the future.

Handbook of Birds of Eastern North America, etc. By Frank M. Chapman. D. Appleton & Co. 1895. 1 vol., 8vo, cloth, and smaller copies in flexible morocco, pp. xiv, 421, pll. 20, figs. 115.

THIS is far and away the best book of the kind which has appeared in this or any other country for many years; it is easily first, and with a long interval among numerous recent competitors for public favor; it is one which would menace the long-established position of

Coues's 'Key,' were its scope not restricted to Eastern North America. As indicated on the title-page, it includes artificial keys to the orders, families, and species; descriptions of plumages, nests, and eggs; statements of geographical distribution, breeding ranges, and migrations; brief accounts of haunts and habits; with introductory chapters on the study of ornithology in its scientific, philosophic, economic, and sentimental aspects, and on the identification, collection, and preservation of birds, their nests, and eggs. There is a list of the principal authorities cited, and a good index. The absence of a glossary is explained by the fact that none is needed, for the author uses only words which can be understood by any one who has learned the difference between a bird's head and its tail. "I have not," says he, "addressed an imaginary audience, nor have I given my prospective readers what, theoretically, I thought they ought to have, but what my personal experience with students of birds has led me to believe would meet their wants." In this practical, sensible aim the author has scored a brilliant success; his prescriptions can be taken from cover to cover with the assurance that they will cure any case, short of invincible ignorance, *celere, certe, tute, atque jucunde;* his book is one to be put in the pocket when we go afield for birds, just as we put on a hat and take up the gun.

This Manual will not promote Mr. Chapman to the first rank among American ornithologists, for the simple reason that he is already in that enviable position, fairly won by years of industrious, enthusiastic, well-directed work, both in the closet and in the field; but it will assure his permanent place among the masters of birdcraft, if he never does anything more. The highest qualifications of the technical scientist are often supposed to be incompatible with those of the field-naturalist; and this supposition may be true to the extent that few persons show equal faculties of reflection and observation, or the ability to hold the imagination in the leash of reason. Mr. Chapman is exceptionally well constituted in this respect; he holds his ardor steadfastly, with the result of something about his ornithology which the present reviewer has often called "sweet reasonableness." The work he now gives us is a model of all that a handbook should be, without a single objectionable or even undesirable feature. The fact that it reaches us with all the weight of authority which the author's position in the American Ornithologists' Union can confer upon this ripe fruit of long experience may be an official voucher for its eminent excellence, but that does not weigh a feather in a case of such obvious intrinsic merit. It would make its way in the bird-world as a text-book if it were anonymous. Failing to find anything to criticise on a careful first reading, we deliberately read it through again for typographical errors, without finding any to speak of. The book is not amenable to criticism in any respect; neither does it need any bush; there is not a pin-feather in it.

Mr. Chapman's limitation of himself to an area east of the ninetieth meridian will keep his book out of the "North American" lists, and put it distinctively in the line of "local" avifaunæ; but the region whose birds are treated is still so extensive, and includes so large a proportion of the whole number of persons who are interested in birds in this country, that his *clientèle* can hardly be appreciably affected by the restriction. In its own field it will stand for an indefinite period without a possible rival.

The pivotal point about the book is the idea of ready identification of specimens in hand—and often of birds in the bush—by the system of artificial "keys," without which no book professing to teach ornithology now has much chance of success. Mr. Chapman's keys are so well constructed that they unlock the mysteries with great ease, and lead us speedily to the more detailed technical characters of every order, family, and species—excepting those of the latter which are mere stragglers or accidental visitants, such being only mentioned. Being thus assured of our bird, we are given a biography in brief of each species—and very telling are these pen-and-ink portraits. Besides being true to the life, they are written in great good taste; they show fine feeling which never sinks into sentimentalism, and are dainty without jauntiness. To one so full of his subject as Mr. Chapman the danger of spilling over is immanent; but he always holds himself steadily in hand. Some of these miniature pictures are by other hands; if some seem to suffer by the juxtaposition, we may recall the adage about comparisons. Mr. Brewster, at all events, is Mr. Chapman's peer in this and other respects. Many of the songs of birds are expressed in musical notation, besides the more or less happy attempts to imitate them phonetically in words. This is a matter for which Mr. Chapman is probably more gifted by nature and better equipped by practice than any other ornithologist now seeking public favor. The numerous illustrations are in every way worthy of the text. They are of two kinds. The full-page plates are mostly half-tones, beautifully done; though on the whole the whippoorwill picture, of a different character, is perhaps the best. The small cuts are telling ones, of what may be called the "rough-and-ready" sort, illustrating the particular points in the text which the author wishes to emphasize; every one has thus its own duty to do, in showing up a diagnostic mark of bill, head, wing, tail, or foot. Mr. Tappan Adney is to be congratulated upon his success. All the illustrations are new; one of the most original is that showing on which arm of the cycloidal curve the goldfinch says "per-chic-o-ree" as he flies. The well-considered color-chart is a valuable feature—what Mr. Chapman calls his "mental palette" for putting his tones and shades of plumage into print.

If we seem to have thus dwelt needlessly upon the merits of a book so well able to speak for itself, we may plead the sheer pleasure it gives us to praise it. We imagine that few will lay hold of it without wondering how they ever got along without it.

The Humour of Russia. Translated by E. L. Voynich. With an Introduction by Stepniak. [International Humour Series.] Charles Scribner's Sons.

One is somewhat puzzled, at first, over the choice of pieces which are here presented to him as fitly embodying the different types of Russian humor. Assuredly, Von Vizin ought to have been included, and Gogol's 'The Inspector' would have been more comprehensible to the general foreign public, unacquainted with the fine lights and shades of Russian character and customs, than 'A Madman's Diary' and his 'Marriage,' which Stepniak justly praises in the Introduction. Ostrovsky's "Incompatibility of Temper" is sufficiently characteristic, and his "A Domestic Picture" exhibits the Moscow merchant's code of morals as admirably, in a small way, as any of his great series of comedies; but a more celebrated play than the former and a more humorous play than the latter might have been found in his extensive theatre. The truth would seem to be, that the translator has set herself the task of avoiding things which have previously appeared in translation, and things which run beyond a certain length, with the object of affording specimens from as many writers as possible. It is a pity that she did not seize the present opportunity of collecting the very best examples possible, without regard to the conditions just suggested. The pieces to which we have referred possess the universal quality of wit which can be appreciated by all nations, without special initiation into Russian habits of thought and life, whereas it is to be feared that many readers will miss the very delicate shades of the essentially national humor in many, perhaps the majority, of these cases. "Shchedrin's [Saltykoff's]" political satires are well chosen, and much more intelligible to the foreigner than most of his work. Dostoevsky's fantastic tale of 'The Crocodile' furnishes a very plain clue to the fact which the student of Russian humor must always bear in mind, namely, that all *tchinovniki* (officials) and the whole bureaucratic system are lawful, perennial objects of ridicule. Mr. Stepniak modestly admits that his "The Story of a Kopek" is a bit of early work, and, indeed, it is built on the pattern of tales told to small children, and is not readily to be comprehended even by one familiar with Russian ways, though its political drift is plain enough.

Although there is no doubt that a more popular volume might have been prepared, the attentive reader will find these sketches replete with national touches which will well repay his study. The translation is truly remarkable for its accuracy and spirit, and the book is decidedly one which should be added to any collection of Russian literature. If Mr. Stepniak or the translator had superintended the illustrations, the absurdity of the *samovar* as here depicted, and of the deacon clad in a European overcoat and chimney-pot hat, would have been avoided.

Fourth Edition of

The Ways of Yale.

By HENRY A. BEERS. *Buckram Series.* 75c.

"There is only one fault to find, and that is that there is not enough of it."—*New York Times.*

"Yale is to be congratulated upon having such a writer on her campus. So many rankly unjust and superficial books have been written on Yale ways, that such a book as the present one is a refreshing innovation."—*Yale Literary News.*

The latest issue in the Buckram Series.

"The Master-knot," and "Another Story."

By CONOVER DUFF. Two tales told in letters. 75c.

HENRY HOLT & CO., N. Y.

GUILLERMO DOBLACHE'S "*Picarillo*" (natural, unsweetened, unfortified table sherry), bottled in Port St. Mary's, Spain, and shipped in cases of one dozen bottles each. For sale by PARK & TILFORD, New York, and all wine merchants. Send for price list.

Copeland and Day,

69 Cornhill, Boston.

FIRST POEMS AND FRAGMENTS

By PHILIP HENRY SAVAGE.

Five hundred copies, octavo, $1.25. Fifty copies on handmade paper, $3.00.

"Mr. Savage has real poetic talent—is intellectual as well as delicate. His sonnets are grave and full of aspiration."—*N. Y. Times.*

"Mr. Savage is a Wordsworthian as to his school. To the vast scope this poet makes no essay; he lives in Nature as in the essential presence of God, and finds there divine messages abounding."—*Springfield Republican.*

ON THE WOOING OF MATHER PITKIN:

Being a Versified Narrative of the Time of the Regicides in Colonial New England.

By CHARLES KNOWLES BOLTON.

Small octavo, 75 cents. 2d Edition. Thirty-five copies on large paper, full blind-tooled leather, $2.00.

"Copeland and Day have hit upon as neat and attractive a costume for a small, purely Colonial poem as any bibliophile might covet. Mr. Bolton's poem is charming, and fitted to the stately day of simple costliness."—*Chicago News.*

Copeland and Day.

Seasonable Books.

WITH THE WILD FLOWERS.

By E. M. HARDINGE. 16mo, cloth, illustrated, $1.00.

This delightful little book carries the reader through the whole season with the wild flowers, as they make their appearance. It is written with imagination, humor, and the quality of thoroughly interesting and entertaining the reader without sacrificing either accuracy or detail.

THE AMATEUR AQUARIST.

By MARK SAMUEL. 12mo, cloth, illustrated, $1.00.

An American book indispensable to every aquarium owner. It contains Complete Instructions for making a Self-Sustaining Aquarium, requiring Change of Water but Once a Year, and tells How, When, and Where to find suitable Water-Plants and Fishes. It contains over Fifty new Illustrations from Life, by which to identify specimens.

"The book is one of the necessaries of life to the youngster who either has or is dreaming about an aquarium."—*New York Herald.*

AMATEUR PHOTOGRAPHY.

A Practical Guide for the Beginner. By W. I. LINCOLN ADAMS, Editor of "The Photographic Instructor." Illustrated, paper, 50 cents; cloth, $1.00.

"It gives fully all the information that the beginner who is more than a button-presser wants. The chapters on portraiture, flash light work, and orthochromatic work are full of interest to the past master as well as the beginner. The tables in the Appendix are well worth the study of amateur and professional."—*The Journalist.*

The Nation

VOL. LX—NO. 1565. THURSDAY, JUNE 27, 1895 PRICE 10 CENTS.

JUN 28 1895 A.M.

D. Appleton & Co.'s New Books.

European and American Cuisine.

By GESINE LEMCKE, author of "Desserts and Salads," and Principal of the Brooklyn Cooking College. Small 8vo. Cloth, $2.00.

A practical and complete guide to household cookery by a well-known teacher and lecturer, whose experience in Europe and in this country has enabled her to appreciate the requirements to be satisfied.

Handbook of Sanitary Information for Householders.

By ROGER S. TRACY, M.D., Sanitary Inspector of the New York City Health Department. New edition. 16mo. Cloth, 50 cents.

Dr. Tracy's scientific knowledge and practical experience enable him to treat the subjects of ventilation, drainage, care of contagious diseases, disinfection, food, and water in a manner that will prove of value to every citizen. This book has been fully revised to include the latest discoveries and methods.

The Story of "Primitive" Man.

By EDWARD CLODD, author of "The Story of Creation," etc. Library of Useful Stories. Illustrated. 16mo. Cloth, 40 cents.

This volume presents the results of the latest investigations into the early history of the human race. The value of an up-to-date summary like this is especially marked in view of the interest of the subject Like the successful "Story of the Stars," this book is written in clear, concise language, as free as possible from technical words and phrases. The author is a recognized authority, and his lucid text is accompanied by a large number of attractive illustrations.

Into the Highways and Hedges.

By F. F. MONTRÉSOR. No. 168, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"'Into the Highways and Hedges' would have been a remarkable work of fiction at any time; it is phenomenal at this, for it is neither trivial, eccentric, coarse, nor pretentious, but the opposite of all these, and a very fine and lofty conception."—*London World.*

A Street in Suburbia.

By EDWIN PUGH. 12mo. Cloth, $1.00.

This is a study of local color like Barrie's "Window in Thrums," and some of the work done by Crockett, Maclaren, and Morrison. The nice observation and abundant sense of humor shown in these pictures of humble life will be certain to meet with appreciation.

The Vengeance of James Vansittart.

By Mrs. J. H. NEEDELL, author of "Stephen Ellicott's Daughter," etc. No. 169, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

Mrs. Needell has always shown a quick appreciation of the dramatic possibilities which lie so near the surface of everyday life, but her study of motives and primitive forces has resulted in nothing so absorbing as the story which is unfolded in her latest book.

A Study in Prejudices.

By GEORGE PASTON. No. 170, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

This striking and interesting story will be found none the less interesting because it questions one of the unwritten laws by which men and women are judged.

"A bright story, a tale to be read, essentially modern in conception,"—*London Literary World.*

The Zeit-Geist.

By L. DOUGALL, author of "The Mermaid," "Beggars All," etc. 16mo. Cloth, 75 cents.

Miss Dougall has written a charming and thoughtful story in "The Zeit-Geist" which will not be forgotten by the reader. Its suggestions are of peculiar interest at a time when the subjects touched upon are in so many minds.

The Art of Newspaper-Making.

Three Lectures. By CHARLES A. DANA. 16mo. Cloth, $1.00.

The art of making a newspaper that is read is one of which Mr. Dana has proved himself a past master. Those who follow his calling will turn to his book to discover the secret. Those who read newspapers—and this is a nation of newspaper readers—will feel a lively interest in the views and experiences of the dean of American newspaper-makers.

Appletons' General Guide to the United States.

New edition, revised to date. With numerous Maps and Illustrations. 12mo. Flexible morocco, with Tuck, $2.50.

(Part I, separately, NEW ENGLAND AND MIDDLE STATES AND CANADA; cloth, $1.25. Part II, SOUTHERN AND WESTERN STATES; cloth, $1.25.)

The most comprehensive and informing book of its class for the traveller or for any one who wishes a bird's-eye view of the country. Prepared by an American editor who has visited almost every part of the country in quest of information.

Appletons' Hand-Book of Summer Resorts.

New edition, revised to d[ate]. With Maps, Illustrations, and Table [of] Broad Fares, etc. Large 12mo. Paper, [cents.]

Public Library

Appletons' Canadian Guide-Book.

Complete in one volume. With Maps and Illustrations. 12mo. Flexible cloth, $1.50.

In one convenient volume are presented Prof. Roberts's delightful Guide to Eastern Canada, and also supplementary chapters which guide the tourist through Western Canada, across the plains of Manitoba, through the beautiful scenery of the Canadian Rockies and British Columbia to Vancouver and Victoria. The complete volume furnishes a useful and comprehensive study of the great empire of Canada as a whole which will be indispensable for any one interested in the subject.

Handbook of Birds

OF EASTERN NORTH AMERICA. With Keys to the Species; Descriptions of their Plumages, Nests, etc.; their Distribution and Migrations. By FRANK M. CHAPMAN, Assistant Curator of Mammalogy and Ornithology, American Museum of Natural History. With nearly 200 Illustrations. 12mo. Library Edition, cloth, $3.00; Pocket Edition, flexible morocco, $3.50.

"I have examined the 'Handbook' with the greatest satisfaction. It is what I hoped for, what we have all waited for—a true manual covering a broad field, but not too broad and crammed with knowledge, but brightened throughout with pleasant description; a book, I should think, for every student of birds, whether he knows much or little; invaluable, certainly, for all earnest amateurs."—*Bradford Torrey.*

"A boon to the amateur, a convenience to the professional, and will prove a help and incentive to the study of birds."—*C. C. Merriam.*

"I am delighted with the 'Handbook.' So entirely trustworthy and up to date that I can heartily recommend it. It seems to me the best all-around thing we have had yet."—*Olive Thorne Miller.*

Familiar Flowers of Field and Garden.

By F. SCHUYLER MATHEWS. Illustrated with 200 Drawings by the author. 12mo. Library Edition, cloth, $1.75; Pocket Edition, flexible morocco, $2.25.

"Altogether a decidedly valuable addition to our floral literature."—*American Florist.*

"A book of much value and interest, admirably arranged for the student and the lover of flowers. . . . The text is full of compact information, well selected and interestingly presented."—*New York Sun.*

"A book which will make every reader more familiar with Nature, and will lead to a better understanding of Nature's perennial message."—*Brooklyn Standard Union.*

☞ *Appletons' Monthly Bulletin of New Publications will be sent regularly to any address, free, on request.*

[*Educational continued on page v.*]

MACMILLAN & CO.'S NEW PUBLICATIONS

NEARLY READY. A NEW NOVEL BY MRS. HUMPHRY WARD, AUTHOR OF "MARCELLA," ETC.

The Story of Bessie Costrell.

By Mrs. HUMPHRY WARD,

Author of "Marcella," "The History of David Grieve," "Robert Elsmere," etc. Uniform with "Marcella." 1 volume, 12mo, cloth, 75 cents.

BY THE SAME AUTHOR.—**MARCELLA.** 12mo, paper cover. Macmillan's Novelists' Library. 50 cents.

JUST PUBLISHED.

By the Author of "Friendship of Nature."

Birdcraft.

A Field Book of Two Hundred Song, Game, and Water Birds. By MABEL OSGOOD WRIGHT. With numerous full-page Plates containing 128 Birds in their natural colors, and other Illustrations. 8vo, bound in linen, $3.00 net.

DR. ELLIOT COUES writes of Mrs. Wright's book, in the *Nation*, as follows: "Her book belongs distinctively to the class of writings about birds with which such names as those of John Burroughs and Wilson Flagg have long been associated, and with which Mrs. Olive Miller has more recently become connected. She is dearly in love with her subject, and her pliant pen adorns bird-traits with many charmingly turned expressions of decided originality. Mrs Wright's individuality stamps the book as something out of the common, and this is so attractive that, as we premised, her work can hardly fail to achieve success."

THE FIRST VOLUME NOW READY.

The Novels of H. De Balzac.

Edited by GEORGE SAINTSBURY. To be completed in about 40 volumes, published monthly.

THE WILD ASS'S SKIN (La Peau de Chagrin).

Translated anew by ELLEN MARRIAGE. With a General Introduction to the Series, and a Special Introduction to this Novel, by GEORGE SAINTSBURY, and a Portrait and two full-page Etchings by W. BOUCHER. Carefully printed on paper specially prepared. Crown 8vo, cloth, $1.50.

*** Mr. George Saintsbury has undertaken the editorship of this edition of Balzac. He has contributed to the above first volume an interesting and valuable introduction dealing biographically with Balzac, and critically with his work in general, and he will also contribute an introduction to each work, as it appears The translations themselves will in no case be reprints of former versions, but have been and will be specially executed under the supervision of the editor, Mr. Saintsbury.

NOW READY.

New Novel by the Author of "Esther Waters," "Mummer's Wife," etc.

Celibates.

By GEORGE MOORE. 12mo, cloth, $1.50.

". . . Mr. Moore's art in the description of nature which he introduces in landscape and atmospheric effect, and of persons, is very subtle; he brings out his idea well in each story with wonderful imaginative writing."—*New York Herald.*

Legends of Florence.

Collected from the People and Retold by CHARLES GODFREY LELAND (Hans Breitmann). First Series. 12mo, cloth, gilt top, pp 271. Price $1.75.

Social England Series.

Edited by Kenelm D. Cotes, M.A., Oxon.

THE TROUBADOURS AND COURTS OF LOVE.

By J. F. ROWBOTHAM, author of "The Great Composers," "A History of Music," etc. With two Maps and thirteen Illustrations. Crown 8vo, $1.75.

NEARLY READY.

New Book by William Winter, Author of "Shakespeare's England," etc.

Shadows of the Stage.

THIRD SERIES.

By WILLIAM WINTER.

18mo, cloth, gilt top, 75 cents. Uniform with "Gray Days and Gold," etc.

NEW VOLUME OF THE IRIS SERIES OF NOVELS.

Maureen's Fairing.

By JANE BARLOW, author of "Irish Idylls," "The End of Elfintown," etc. Illustrated. 16mo, linen, 75 cents.

"Miss Barlow, especially when she deals with Ireland, is so delicate and a true painter of life. . . . The short stories are bright and perfect works of art. . . . Nothing can be more perfect in its way than the humor of those two stories. . . . Nor is there one of the tales in this little book that is characterized by the almost too profound melancholy of Miss Barlow's 'Irish Idylls.' Her new tales touch the happier side of Irish life . . . The first story, 'Maureen's Fairing,' is exquisite. 'Stopped by Signal' is a perfect gem, and will even add to Miss Barlow's well-merited though modest reputation for seeing both the fun and pathos of Irish character."—*The Spectator.*

JUST PUBLISHED IN THE SAME SERIES.

By the Author of "Love and Quiet Life."

Tryphena in Love.

By WALTER RAYMOND, author of "Love and Quiet Life," "Gentleman Upcott's Daughter," etc. Illustrated by J. WALTER WEST. 16mo, cloth, 75 cents.

Guy Boothby's New Novel.

A Lost Endeavor.

By GUY BOOTHBY, author of "On the Wallaby," "A Bid for Fortune," etc. With Illustrations by STANLEY L. WOOD. 16mo, cloth, 75 cents.

SECOND VOLUME NOW READY.

Macmillan's Miniature Series.

Issued Monthly. Price 25 cents. Yearly Subscription $2.75.

THE FRIENDSHIP OF NATURE.

A New England Chronicle of Birds and Flowers. By MABEL OSGOOD WRIGHT, author of "Birdcraft." 32mo, paper cover, 25 cents.

"Inexpressibly refined in its impressionism, this little volume is like a series of subtly wrought etchings, and is destined to give a vast amount of pleasure to those who can appreciate its unpretentious merits."—*The Beacon (Boston).*

First Volume.

SHAKESPEARE'S ENGLAND. By WILLIAM WINTER.

Messrs. Macmillan & Co. will issue monthly, in paper covers, under the title of "Macmillan's Miniature Series," the following popular works:

A TRIP TO ENGLAND. By GOLDWIN SMITH (*July.*)

THE PLEASURES OF LIFE. By Sir JOHN LUBBOCK. (*September.*)

OLD SHRINES AND IVY. By WILLIAM WINTER. (*October.*)

NEW VOLUME.

Macmillan's Illustrated Standard Novels.

THE ADVENTURES OF HAJJI BABA OF ISPAHAN.

By JAMES MORIER. Illustrated by H. R. MILLAR With an Introduction by the Hon. GEORGE CURZON, M.P. 12mo, cloth, $1.25.

Already Published.

1. **CASTLE RACKRENT, AND THE ABSENTEE.** By Miss EDGEWORTH.
2. **JAPHET IN SEARCH OF A FATHER.** By MARRYAT.
3. **TOM CRINGLE'S LOG.** By MICHAEL SCOTT. Illustrated by J AYTON SYMINGTON. With an Introduction by MOWBRAY MORRIS.
4. **THE ANNALS OF THE PARISH AND THE AYRSHIRE LEGATEES.** By JOHN GALT. Illustrated by CHARLES E. BROCK. With an Introduction by ALFRED AINGER.

NEW VOLUME.

Macmillan's Novelists' Library.

Issued Monthly. Price (in paper), 50 cents. Yearly Subscription, $5.50.

THE NAULAHKA.

A Story of West and East. By RUDYARD KIPLING and WOLCOTT BALESTIER. 12mo (popular edition), paper cover, 50 cents

Already Published, Uniform with the Above.

1. **MARCELLA.** By Mrs HUMPHRY WARD, author of "The History of David Grieve," "Robert Elsmere," etc.
2. **SANT' ILARIO, A Sequel to "Saracinesca."** By F. MARION CRAWFORD.

To be Issued in July.

THE HISTORY OF DAVID GRIEVE.

By Mrs. HUMPHRY WARD.

GRANIA. By Hon. EMILY LAWLESS. (*August.*)

MR. ISAACS. By F. MARION CRAWFORD. (*September.*)

THE DELECTABLE DUCHY. By "Q." (*October.*)

GARDEN AND FOREST

A JOURNAL OF HORTICULTURE LANDSCAPE ART AND FORESTRY

JANUARY 2 1895

Indispensable to all who love gardens or the literature of gardens; to all who own country places or take pleasure in rural scenery; to all who desire a broader knowledge of trees, shrubs, fruits and flowers. GARDEN AND FOREST stands for the protection of our forests, for the preservation of natural beauty, for a purer taste in the design and decoration of public and private grounds, and is universally pronounced the best horticultural journal ever published for Americans.

BEAUTIFULLY ILLUSTRATED.

Or, True Coin Versus False Coin. By EVERETT P. WHEELER. (No. 84 in the Questions of the Day Series.) Illustrated, paper, 40 cents; cloth, 75 cents.

Natural Taxation.

An Enquiry into the Practicability, Justice, and Effects of a Scientific and Natural Method of Taxation. By THOMAS G. SHEARMAN. (No. 83 in the Questions of the Day Series.) 12mo, cloth, $1.00, and paper, 50 cents.

Water Tramps,

Or, The Cruise of the Sea Bird. By GEORGE HERBERT BARTLETT (similar in general style to "A Literary Courtship"). 16mo, cloth, $1.00.

Cause and Effect.

By ELLINOR WEIRION. American Copyright Edition. 12mo, cloth, $1.00.

Dr. Izard.

By ANNA KATHARINE GREEN, author of "The Leavenworth Case," "Marked Personal," etc. 12mo, cloth, $1.00; paper, 50 cents.

This story is quite distinct in character from the author's previous books. It has already been printed as a serial, and the reviewer speaks of it as "a story of distinctive originality and exceptional power, which will linger in the memory of its readers."

Yale Yarns.

By JOHN SEYMOUR WOOD. Similar in general style to "Harvard Stories." 12mo, illustrated, cloth, $1.00.

A volume of characteristic stories of Yale undergraduate life, full of humor, and written in something the same vein as W. K. Post's recently published "Harvard Stories."

**** *Notes on New Books, a quarterly bulletin, prospectuses of the Heroes of the Nations Series and the Stories of the Nations Series, sent on application.*
